THE ABSTRACT OF ALL INFORMATION

001 Article to Nature (10 Dec 2006)

Summary: *Wisdom of an essential kind is emerging. It sheds light upon hidden mysteries behind everything of the physical world that we perceive with our five senses. This enables us to use logic in the most sublime, precise way. The result is a profound understanding of the origination of the particle and hence universe and the functioning of the human mind and consciousness.*

This is an extraordinary article that is difficult to understand. It was so when the truth about the spherical moving Earth was declared first. The Earth was flat and stationary only in the minds of the people and the scientist had to struggle to make it spherical and moving, again in the minds of his people. This article concerns topics that are much more difficult to comprehend as they pertain to hidden, unseen secrets behind different branches of science, mathematics, history and psychology. It reveals the definition of human mind and consciousness. Though this may appear unbelievable, it describes only facts that can be proved before a team of expert intellects. It's intended only to draw attention of serious readers to an area that remained hidden so far. It's impossible to give even a glimpse of such an all-pervading, totally unfamiliar subject within the limited pages of an article like this. Attempt is made just to give a general introduction to this along with indicators marked in different directions.

Already several letters to heads of nations, renowned research institutes and universities have been sent discussing extremely important, fundamental matters related to our abode the Earth and the entire universe. This overwhelming flow of wisdom is introduced by Abdul Khader living in Calicut, Kerala, India. He was

looking for a team of intellects from various branches of science to explain very fundamental, profound matters related to the universe and laws of nature. Several faculty from neighbouring universities have listened to him for considerable amount of time. It is certain that the matters he discusses are of utmost importance to the entire world and humanity. This new phase of science encompasses all branches of knowledge and reveals inner principles behind the conception of the universe and its evolution. It explains at micro- and macro-levels why things exist the way they do. The principles behind mathematics and natural numbers, the reason for the presence of three basic colours in nature, mysteries behind the existence of millions of plant and animal species, the unique and peculiar trajectories of the Sun and planets, and hidden secrets behind stars and black holes are getting exposed with proof. Just as it's impossible to think without the concept of zero, it's clear that this newly revealed wisdom is most essential to bring peace and harmony to the entire world.

The topics he discusses are all in a different and unusually high plane. He talks about mathematics and colour as the language through which nature teaches us. Every object, inanimate or living, is made up of the three basic ingredients—space, time and consciousness. These three 'invisible' constituents have one-to-one correspondence with the three basic colours red, green and blue respectively. On Earth, a form of red is seen in the soil, a form of green in its vegetation, and a form of blue in the sky (and in oceans). This threesome is also seen in the 3 states of matter (solid, liquid, gas), in 3 categories of species (living under water, on land, in air), and the 3 basic constituents of an atom (neutrons, protons, electrons). Are these just a matter of coincidence as we tend to think, or are these the result of very specific but hidden laws of nature? The major difficulty is that the proof is neither simple to explain nor easy to grasp as one needs to master a number of unfathomable, concealed doctrines behind nature and its evolution before undertaking this journey.

"All sciences emanate from mathematics", he explains. "The maths we use has a hidden essence or soul. At present we're able to use only the material body of maths, which in itself is beautiful and

mighty. Its inner soul is far richer, elegant and splendid. The golden ratio existing widely in nature too has an unseen, extremely important essence. The quantity π is a principle. Geometric forms such as triangles, rectangles and circles in nature have profound inner meanings. There is a specific reason why we were taught to write the digits 1, 2, 3, etc. the way we write them". He says that there are several layers of hidden inner principles that exist throughout nature. Strict mathematical principles govern the organisation of genes in human DNA too. "Why do we have so many planets in our solar system?" he asks. "For the occurrence of day and night, the Sun and Earth alone were adequate. It's possible to explain with proof why the solar system exists the way it does. Why the Earth shows the marvellous blue colour when seen from outer space; why the planets Mercury and Venus exist before Earth; why Venus and Uranus (at 2nd and 8th orbits) rotate retrograde; 2 and 8 also appear as the valence electrons in inert materials. Why Venus is made of such a shining material that makes it the brightest object in night sky; why it appears either just after sunset or just before sunrise at convenient viewing angles; why Jupiter is so large, Saturn has a magnificent ring, Neptune is blue and Pluto's path intervenes that of Neptune." He elucidates these with logical evidence. Nothing in nature happens without a noble, fundamental purpose. It was a couple of years ago that he first talked to us about the solar system. He explained on several occasions that there is a clear, comprehensible reason why the asteroids were left as asteroids and not combined to form a planet. "The rules for the first 4 planets forming the first set, and the next 4 forming the second are entirely different", he explains. "Pluto and other celestial objects we may spot in future follow a totally different set of rules when compared to these 8 planets". Those days when he talked about Pluto, we all believed it to be a planet. As IAU decided to reclassify it as a dwarf planet, it's evident that this is a great proof of his statements. He says while IAU's resolution of demoting Pluto is right, corrections are necessary in its other resolutions.

Abdul Khader spends time in solitude, pondering over nature and its creations. He doesn't take anything for granted and goes with a free mind after any clue from nature however trivial it may appear.

This article is prepared under his supervision. “If one looks around one realises that the entire humankind is in utter darkness at present”, he points out. “Corruption and lawlessness are widespread. Terrorism and fundamentalism cause destruction of life and wealth. There must be a way to restore justice and peace on Earth with the right understanding of nature and principles behind its laws. The whole universe functions smoothly without conflicts. Nature around us, plants and animals too follow the universal rule. Human beings alone cannot continue to fight with one another and spread trouble; they too need to live in harmony with themselves and other living beings. “With the exposure of these universal truths intellects around the world irrespective of their beliefs will begin to pour into the absolute reality. Many new significant branches of science will emerge. So far, science has been telling us ‘how’ things function. It’s about to describe ‘why’ they exist the way they do”. The logical sequence, fluency, consistency and clarity of his elucidations are truly extraordinary. During the long time span in which we heard him speak, he never went back on any earlier remark nor used inaccurate statements. All those who heard him recognise that there is something unique regarding him and what he discusses.

“There exist basic underlying principles behind formation of the universe, its stars, galaxies, planets and other celestial objects”, he describes. “The existence of all animals, birds, insects and plants on Earth are based on very specific but hidden inner principles which we can know with the exposure of this wisdom. Every species carries with it a sublime principle that is related to human mind in a subtle way. The introduction of new species and the withdrawal of existing ones are likewise linked to development of human mind. It is for this purpose that some of the species necessary for our day-to-day life are kept close to us as pets or domestic animals. Species the lessons from which are required only occasionally are kept away from us in thick jungles or under deep oceans. This is like how we organise books; those needed regularly are kept on study table, and those needed infrequently are kept away in libraries.” So far, we’ve been studying about the animal kingdom, their habitats, eating and mating behaviours, migration patterns, and so on with much care and dedication. This knowledge is necessary to take up

the next step—discovering the inner principles behind life. Why does each species exist the way we see it? An elephant is peculiar with its abnormal shape, size, strength, skin thickness, the way its nails look as if glued directly to its feet without fingers, and its unusual trunk. It can drink water only after taking it up into its dirty trunk first. Also as its trunk swings close to the ground, it can inhale only unclean air that contains dust raised by its own movement in herd. Why is the elephant destined this way? These questions have precise, unambiguous answers that are essential and of immense significance. It's possible to explain logically why we were created with 23 (not 22, 24 or any other number) pairs of chromosomes. This'll soon become an indispensable source of most important wisdom.

This phase provides the much awaited definition of mathematics and explains why light is comprised of all colours. The true inner meaning behind uncorrupted parts of all divine Scriptures will be explained enabling us to know why different religions exist now. Soon all religions will join hands. We'll realise the ultimate reality that all of us are alike; we draw energy from the same sunshine, breathe the same air, drink the same water and live on the same Earth. Just as we don't find any religion or caste anywhere among the entire plant and animal kingdom or even among our physical bodies, there can't be such divisions among human mind, the most intelligent of all species. Human mind is about to be defined in true form. People with high scientific and mathematical background will be able to grasp the Revealing Wisdom easier at first. Slowly it'll get disseminated everywhere. Just as it's unimaginable to think of a flat, static Earth now, it was equally unimaginable for the people of the olden times to believe the round Earth. A time is soon to come when humankind will find it astonishing to learn about us that once lived a generation who studied about the physical world without knowing about the most important, unseen world. This article is thus completely different from any other that has ever appeared in Nature. We urge the editors of Nature to interact with us immediately. Being a scientific journal of great repute, Nature has an obligation to unearth the emerging phase of this essential Revealing Wisdom of unending significance at once. <End of

Article>

002 Dr APJ Abdul Kalam, President of India (12 Dec 2004)

Respected Sir, We write this letter to bring to your attention some very important facts that are being conveyed by Abdul Khader, in Calicut, Kerala. The topics he talks about are all in an unusually high plane, unites people from different walks of life, culture and beliefs, and guides them towards the absolute truth. So far, he says, spiritual teachings were provided through prophets, Scriptures and Vedas. Now, everything around us, near or far, begins to teach us very important, universal lessons. Mathematics (Ganitham) and colour are languages through which God teaches us. Every creation is made of space (sthalam), time (kaalam) and consciousness (bodham). These 3 unseen ingredients are denoted by the 3 basic colours: red, green, blue. Earth shows these colours: a form of red in the soil, green in its vegetation, and blue in ocean (and in sky). All sciences emanate from maths. The maths that we deal with has a hidden soul. At present we use only the material body of maths. The golden ratio that exists widely in nature too has a soul. The quantity Pi (π) is a concealed principle. Geometric shapes like triangles, rectangles, circles, etc. in nature convey very important lessons. It's possible to explain with evidence why the solar system is organised the way it is, why the 2 planets Mercury and Venus exist between Sun and Earth, and why 2 Venus and Uranus retrograde. There's a specific reason why we were taught to write the digits 1, 2, 3, .. the way we write them. There are several layers of hidden inner principles behind nature.

Abdul Khader likes solitude and pondering over nature and creations. Through coincidences, he found that his thoughts are getting related to the Quran. He says that the Quran has several layers of meanings that remained hidden so far. It has life, and begins to function on its own at predetermined times; it's opening up a new phase now. Many inner meanings of Quran are getting exposed. The special letters occurring at the beginning of several chapters (Hurooful Muqattaat) like "Alif-Lam-Meem" are getting completely interpreted. These letters act as hidden codes from which the Quran blossoms like a flower blooms out of its bud.

During the past 1400 years, we were exposed only to the physical meaning of the Book. With this phase of Quran, intellects in all faiths around the world will start pouring into the universal reality. Several new branches of science will be born. So far, science has been telling us how things function. It'll begin to describe why they exist with those features this way.

The entire universe functions smoothly without conflicts; nature around us, plants and animals, follow the universal rule. We too need to live in harmony, with one another and nature. This phase leads humanity toward this highly sublime goal. India has always been a glittering example of ahimsa and non-violence. This phase will lift our Country to greater heights as a world-leader in guiding humanity to unity, love and peace. A team of competent intellects, scientists and thinkers needs to be formed to understand and disseminate this revealing phase of universal truth. Intellects well-versed with Arabic and Quran, having broad scientific understanding are also needed. As the team begins to learn, constant interaction with reputed world universities and research centres will be needed. We urge you to ponder over the facts mentioned. This contains only a very small part of what he's conveyed so far. Yours sincerely, M Ameen (sgd)

PS: *This letter was sent to the President's email on 6 Nov 2004*

003 Dr Donald Davis Jr, University of Wisconsin-Madison, US (05 Jan 2005)

Dear Don, *I've shown your mail to Abdul Khader. He conveys his best regards to you. We met him nearly a year ago. He talked about nature, life, meaning of life, and how everything is based on cause-effect principle. He talks with simple but precise logical reasoning throughout. For example, why God provided us with color? "Is color for revealing objects, or is the very purpose of creation to show color? Why there are 3 (no more, no less) basic colors (red, green, blue) from which emerge infinite number of color combinations? This threesome is also seen in 3 states of matter (solid, liquid, gas), and 3 types of species (living on land, under water and in air). Why so many planets exist in the solar system? Why Earth is kept at 3rd orbit; why Venus is made of a shining material; why Jupiter is so*

large and Saturn provided with a ring. These questions arise from their known answers. Matters he discusses are very fundamental and important, and call for urgent attention. He says that the only thing God did violating the laws of nature was the birth of Jesus. If God destined that to happen, there must be a noble and extremely important reason. He can explain this before a team of expert theologians. During some of these discussions, my Christian colleague Dr Sibi Chacko was also present. Abdul Khader told Sibi that God revealed Scriptures to many prophets. But Jesus himself was a Divine Book and a Word of God. He constantly reminds us that Jesus will be made a very important subject not only for the Christians but also to the entire humankind. The structure of human hand and foot contains most important principles to be obeyed that'll lead to a dignified status for humankind. All technological progresses made so far were essential for this phase to begin. Soon, all religions will join and realize the fact that all of us are alike. He demands the presence of a team of highly competent intellects with strong scientific and mathematical background. Science is opening up a new era in which it'll begin to explain 'why' things exist the way they do. We enclose a copy of our recent letter to the President of India. It contains several important aspects concerning the matter. But these letters contain only a very limited part of what he's communicated to us until now. With best regards, M Ameen (sgd)

004 Dr R Ganesan, Concordia University, Canada (17 Jan 2005)

Dear Ganesan, We've been listening to extremely serious matters discussed by Abdul Khader who lives close to NIT Calicut. He talks about nature, life, its meaning, and about an emerging new phase of science. Using simple but precise logical reasoning throughout, he raises questions such as: Is colour for revealing objects, or are the objects to depict colour? Why there are three basic colours (red, green, blue) from which an infinite number of colour combinations emerge? This threesome is seen also in the 3 states of matter (solid, liquid, gas) and in three types of species (those living under water, on land and in air). Why the solar system is set up with its

particular arrangement of planets, orbits and our abode the Earth? These questions, although beyond the purview of the present-day science, are of utmost importance and call for the greatest attention and special care.

The concept of nonviolence has meaning only in presence of violence. Once violence is totally eliminated from the mind, nonviolence has no significance. Although this seems impossible at first, it's indeed very much possible. Human fingers in our hands and feet contain extremely important principles to be obeyed (just as we breathe air or drink water). It'll lead to a dignified status of humankind. All technological progresses we've made until now were absolutely essential for this phase of change to begin. All religions will soon join hands and will realize that all of us are alike. He constantly demands the presence of a team of highly competent intellects with strong scientific background, sharp logical reasoning, sincerity and dedication. Science is opening up a new phase now in which it begins to explain why things exist the way they do. Our recent letter to Dr APJ Abdul Kalam, the President of India, is enclosed herewith. These letters discuss only a very small part of this most extensive and significant matter. With best regards, M Ameen (sgd)

005 Sir I Sacranie, Muslim Council Britain (24 Jul 2005)

Dear Mr Sacranie, We write this to bring to your attention some very serious facts concerning the whole world. The entire humankind is in utter darkness at present. Terrorism and fundamentalism are causing destruction of life and wealth. There must be a means to bring back justice and peace on Earth with true understanding of God and the principles behind His creations. He has created all of us with the same Love and Care. The whole universe functions smoothly without conflict. Nature around us, plants and animals, also move in accordance with the universal rule. Humankind too need to live in harmony, with one another and with nature. Abdul Khader met us an year ago. The topics that he talks about are all in a different and unusually high plane. He says mathematics and colour are the languages through which God teaches us. Every creation is made up of three basic ingredients:

space, time, consciousness. These three invisible constituents are represented by the three basic colours red, green and blue. The Earth shows a form of red in the soil, a form of green in its vegetation, and a form of blue in the sea (and in the sky). This threesome is also seen in the three states of matter (solid, liquid, gas) and in the three categories of species (those living under water, on land, and in air). All sciences emanate from mathematics. Mathematics that we deal with has a hidden soul. We use only the material part of mathematics now. The golden ratio existing widely in nature also has a soul. The quantity Pi (π) is an important principle. Hidden spiritual meanings exist behind geometric shapes such as triangles, rectangles and circles found in nature. Humankind was taught to draw stars by combining two equilateral triangles. Such a hexagram, the Star of David, is a noble symbol for the Jews. This will be defined with all its dignity. It's possible to explain with clear proof why the solar system exists the way it does: the two planets Mercury and Venus occupying orbits before Earth, Venus and Uranus rotating retrograde, Venus shining brightly like a star, Jupiter being the largest in the solar system, and Saturn's magnificent rings. There is a specific reason why we were taught to write the digits 1, 2, 3, .. the way we write them. Several layers of hidden inner principles exist throughout nature. Strict mathematical principles govern organisation of genes in human DNA too.

Abdul Khader likes to spend time in loneliness, pondering over nature and its creations. Lately, he found his thoughts getting related to the Quran (from Malayalam translation of Quran, as he doesn't know Arabic language). He says the Quran has several hidden layers of meanings and is a live Book that functions at predetermined times. It's opening up a new phase now. Many of its inner meanings are getting exposed. For example, the meanings of the special letters that occur in the beginning of several chapters are getting interpreted completely. These letters act as the source code from which the Quran blossoms like a flower blooms out of a bud. During the last 1400 years, they weren't decoded, as we were being exposed to the materialistic meaning of the Book only. These principles can be seen in the unaltered verses of Torah and Bible.

The Torah, Bible and Quran have been revealed in that order from the same One God for the benefit of entire humankind and not for a specific community like the Jews, Christians or Muslims alone. With the exposure of these universal truths, intellects around the world irrespective of their beliefs will start pouring into reality. A number of new branches of science will emerge. Beyond telling us how things work, science will begin to describe why things exist the way they do. The Quran is the handbook of nature. It'll be possible to read the Quran from nature and nature from Quran. The present-day Muslims aren't aware of these most important facts. He hastens to add that he is an ordinary man who is being made instrumental. These facts aren't cooked up by a straying mind, as he constantly warns us that no forms of guessing are permitted in interpreting Quran (or any Scripture).

The only thing God did violating the laws of nature was the creation of Jesus, son of Mary. If God destined that to happen, there must be a dignified, tremendously significant reason. By his very birth, Jesus is a Holy Scripture. It's of utmost importance to expose the truth behind the birth of Jesus at once. Jesus will be made a most important matter for the Christians and the whole humankind. God explains His principles through Creations. It's possible to prove that every living being depicts a principle of God. Thus, to preserve nature and all its plant and animal species becomes the obligation of humankind. This knowledge leads to a perfect balance between the human society and nature. Each of these first appears in his mind. He sees them in the Quran much later. A team of highly competent intellects with broad scientific background and clear logical thinking needs to be constituted at once. He can logically explain before the team with clear evidences the various inner meanings and implications of Quran starting from the basics. Once such a group is formed and we begin to work, we'll have to interact with different renowned world universities and research centres. All our progresses were essential for this phase of significant changes to begin. Soon all religions will come together; we'll realise the ultimate reality that all of us are alike. We live upon the same Earth, breathe the same air, drink the same water, and benefit from the same sunshine. Just as we don't find

any religion or caste anywhere among the plant and animal kingdom or even among our physical bodies, there can't exist any such division among human mind, the most intelligent of all creations. We urge you to ponder over the facts mentioned here; this letter contains only a very small part of what he's communicated to us so far. Yours sincerely, M Ameen (sgd)

PS: Copy sent to a few renowned universities and research centres

006-025 Letters (25 Jul 2005)

Dear Sir, (sent to all listed below)

We write this letter to bring to your attention facts of utmost significance conveyed by Abdul Khader, who lives in Calicut, Kerala. He discusses most important matters concerning nature, humankind and the entire universe. Mathematics and colour are the languages through which God communicates to us. Every creation is made of three basic unseen constituents: space, time, consciousness. These three are represented by the three basic colours: red, green and blue. The Earth shows these colours: a form of red in its soil, green in vegetation, and blue in oceans (and in the sky). This threesome is seen in the three states of matter (solid, liquid, gas), and three categories of species (those living under water, on land, and in air) too. All sciences emanate from maths. But we use only the material part of maths now. It has a hidden soul. Golden ratio that exists widely in nature also has a soul. The quantity Pi (π) is a fundamental principle. Geometric forms such as triangles, rectangles and circles in nature have hidden meanings. We were taught to draw stars by combining two equilateral triangles; the resulting hexagram, the Star of David, is a noble symbol for the Jews; it'll be defined with its true dignity. It's possible to explain with evidence why the solar system exists the way it does. Reasons behind: why Mercury and Venus exist before the Earth, Venus and Uranus rotate retrograde, Venus is the brightest object in the night sky, Jupiter is so large and Saturn has a ring will each be explained logically with clear evidence. There's a specific reason why we were taught to write the digits 1, 2, 3, .. the way we write them. Several layers of hidden inner principles exist throughout nature. Strict but undisclosed mathematical principles

govern the arrangement of human genes and DNA too.

Abdul Khader spends time in solitude pondering over nature and its creations. Of late, he found his thoughts were getting related to the Quran (from Malayalam translations, as he doesn't know Arabic language). He says Quran has layers of hidden meanings. It's a live Book and is opening up a new phase now. Many of its inner meanings are getting exposed. The special letters at the beginning of several chapters are being completely interpreted. These act as the source code from which the Quran blossoms the way a flower blooms out of a bud. These remained a mystery for the last 1400 years. These principles can be seen in the unaltered verses of Torah and Bible also. The Torah, Bible and Quran were revealed from the same One God for the benefit of entire humankind and not for the Jews, Christians or Muslims alone. With the exposure of these universal truths, a number of new branches of science will emerge. So far, science has been telling us how things work; with this phase it'll begin to explain why things exist the way they do. Quran is the handbook of nature; it's possible to read Quran from nature and nature from Quran. But present-day Muslims are unaware of these most important, genuine facts. He hastens to add that he's an ordinary individual who is being made instrumental. He constantly reminds us: guessing of any form isn't allowed in interpreting Scriptures. All these can be logically elucidated before a team of intellects and scientists. The only thing God did violating the laws of nature was the creation of Jesus, son of Mary. There is a dignified and extremely important reason for this. By his very birth, Jesus is a Holy Scripture. It's most important to expose these at once. Jesus will be made a very important matter for the entire humankind, and not for the Christians alone.

Humankind is in utter darkness now. The only way to bring back justice and peace on Earth is with the true understanding of God and the principles behind His creations. God created us with the same Love and Care. The entire universe including nature around us, plants and animals function smoothly without conflict. We too need to live in harmony, with one another and nature. God describes principles through creations. Every species depicts a principle of God; thus, to preserve nature with all its plant and

animal species becomes our obligation. This phase leads to perfect balance between humans and nature. It's necessary to set up a team of exceptionally competent intellects with strong scientific background and logical thinking to learn matters of the unseen from first principles and disseminate this unparalleled wisdom. All technological progresses made so far were essential for this phase to begin. Soon all religions will join; we'll realise the absolute truth that all of us are alike; we live on same Earth, breathe same air, drink same water, and use same sunshine. Just as there is no religion or caste anywhere among the entire plant and animal kingdom, there can't be any such division among human mind, the distinctive creation. We urge you to ponder over facts mentioned here. Only a very small part of what he has conveyed so far is included here. It's the duty of each of us to act responsibly and at once at the face of this most significant Revealing Wisdom. Yours sincerely, M Ameen (sgd)

026 Dr APJ Abdul Kalam, President of India (13 Jan 2006)

Respected Sir, We write this letter to bring to your attention certain extremely grave realities concerning the whole world

conveyed by Abdul Khader residing in Calicut. A few faculty of neighbouring universities have been listening to him for some time. The matters he discusses are all in an unusually high plane and are of utmost importance to the entire world and humanity. He talks about mathematics and colour as the language through which God teaches us. Everything is made of 3 basic ingredients: space, time, consciousness. These three unseen constituents are denoted by the 3 basic colours: red, green, blue. Earth shows these colours: a form of red in the soil, green in vegetation and blue in the seas (and in the sky). This threesome is also seen in the 3 states of matter (solid, liquid, gas), and in the 3 categories of species (those living under water, on land and in air). All sciences emanate from mathematics. Maths we deal with has a hidden soul. We use only the material body of maths now. Golden ratio existing widely in nature also has a soul. The quantity Pi (π) is a principle. He can define and interpret factual meanings of geometric shapes such as triangles, rectangles and circles in nature. We were taught to draw stars by combining two equilateral triangles. Such a hexagram, the Star of David, a noble symbol for Jews will soon be defined with its dignity for the entire humankind. The reasons for the presence of other planets in the solar system besides Earth can be explained with proof. Answers to: Why Mercury and Venus exist before Earth; why Venus and Uranus rotate retrograde; why Venus shines like a star; why Jupiter is so large and Saturn provided with a ring are of greatest significance to scientists and each one of us. There's a specific reason why we were taught to write the digits 1, 2, 3, .. the way we write them. There are several layers of hidden inner principles throughout nature. Strict mathematical principles govern organisation of genes in human DNA too. Abdul Khader likes to spend time in loneliness pondering over nature and its creations. Of late, he found his thoughts getting related to the Quran (from Malayalam translation, as he doesn't understand Arabic language). He says Quran has several hidden layers of meanings. It's a live Book that functions on its own at predetermined times; it's opening up a new phase now. Many of the inner meanings of Quran are getting exposed. The special letters present at the beginning of several chapters are being fully interpreted. These remained hidden

for the last 1400 years. They act as the source code from which the Quran blossoms the way a flower blooms out of a bud. The Quran is the handbook of nature; it's possible to read Quran from nature and nature from Quran. These appear in his mind first; he encounters proofs in Quran much later. According to Quran, no society exists without a Divine Book revealed upon it. These can be seen in the unaltered verses of all Divine Scriptures including the Torah and Bible revealed from the same One God for the benefit of the entire humankind and not to any specific place, community or time as we now think.

The only thing God did violating laws of nature was the creation of Jesus, son of Mary. There's a dignified, tremendously significant reason for this. By his very birth, Jesus is a Holy Book. Jesus will be made a very important subject not only to the Christians but to the entire humankind. With the exposure of these universal truths intellects around the world irrespective of their faiths will start pouring into the absolute reality. Many new branches of science will emerge. So far, science has been telling us how things function. With this phase it begins to describe why they exist the way they do. He hastens to add that he's an ordinary man; he is being made instrumental. He constantly reminds us: guessing of any form isn't permitted in interpreting any Scripture. God explains His principles through creations. Every living being depicts a principle of God. Consequently, to preserve nature with all its plant and animal species becomes our obligation. This'll lead to a perfect balance between human and nature.

He keeps demanding for a team of exceptionally talented scientists, mathematicians and psychologists. He can elucidate with proof the facts mentioned here starting from preliminaries. All the technological progresses we've made so far were essential for this phase to begin. Soon all the religions will join and realise that we're all alike. Just as we don't see any religion anywhere among the entire plant and animal kingdom or among our bodies, there can't be any such division among the human mind, the unique creation. We urge you to ponder over facts mentioned. These aren't easy to grasp and may seem unbelievable at first. This contains only a very small part of what he has conveyed so far. We urge you to do the

needful urgently to form a team of highly competent intellects with strong scientific background and logical reasoning from different branches of science, mathematics and psychology. Yours sincerely, M Ameen (sgd)

027 Dr APJ Abdul Kalam, President of India (15 Aug 2006)

Respected Sir, This letter brings to your attention certain extremely important and very fundamental matters concerning our nation and the world. Ancient India is known for its innumerable contributions to science and technology that covered all major branches of human knowledge and activities including maths, astronomy, physics, chemistry, medicine and engineering. India was the birth place of several important mathematical concepts, including the zero, decimal system and algebra. A new phase of science is emerging now from our country. This encompasses all branches of knowledge and reveals inner principles behind creation. It enables us to explain at both micro- and macro-levels why things exist the way they do. Principles behind mathematics, the presence of three basic colours (red, green, blue), the creation of plants and animals, the Sun and Moon, stars and black holes, are all slowly getting unfolded with clear evidence. This phase exposes misconceptions brought by religions and philosophies, and unites humankind as one community. Just as it's impossible to think of a situation without the concept of zero, this most important Revealing Wisdom is most essential to bring peace and harmony to the entire world.

We're introduced to this overwhelming flow of wisdom by Abdul Khader living in Calicut, Kerala. Several of my colleagues have listened to him for a considerable amount of time. Matters he discusses are of utmost significance to the entire world and humanity. He says: mathematics and colour are the languages of nature. The three basic colours: red, green, blue denote the three basic ingredients of space, time, consciousness. The Earth shows these colours: a form of red in its soil, green in vegetation, and blue in sky (and in the seas). This threesome is also present in the three states of matter (solid, liquid, gas), and in the three categories of species (those living under water, on land and flying in air). This

matter is difficult to grasp; more difficult than it was for the earliest scientist to convince his people that the Earth is round and moving. Earth was flat and stationary only in their minds and he had to make it round and moving, again only in the minds of his people. The unseen truth behind creation is far harder to perceive than the topics dealt by science now which deals only with physical universe and depends on observable tangible facts. This phase of wisdom provides the much awaited definition of maths and elucidates why light is comprised of all colours. The true inner meanings behind uncorrupted parts of all divine Scriptures will be explained. We'll then know why different religions exist now. It'll lead to a single human society with a single belief putting an end to discriminations of every kind and texture. To learn and disseminate this most extensive indispensable phase of knowledge to the entire world, a team of highly competent intellects with dedication, sincerity, and strong scientific background needs to be formed. Being the President of the nation which has contributed tremendously to enlighten the world during the course of the entire history, you have a very important role, Sir. Yours sincerely, M Ameen (sgd)

028 President, Intl Astronomical Union, France (4 Sep 2006)

Dear Mr President, We write this letter to bring to your attention certain very important and grave matters concerning our planet Earth and the solar system. As mentioned in our letter to the President of India(copy enclosed), we're introduced to this matter by Abdul Khader, who resides in Calicut, Kerala. "All sciences emanate from mathematics", he says. "The mathematics that we deal with has a hidden soul. We use only the material body of mathematics now; the golden section that exists widely in nature also has a soul; the quantity ' π ' is a principle. Geometric shapes such as triangles, rectangles and circles existing in nature have profound inner meanings. We were taught to draw stars by combining two equilateral triangles. Such a hexagram, the Star of David, appears as a noble symbol for the Jews. The inner principles behind this will be defined with dignity; this symbol is vital for the entire humankind, and not for the Jews alone. Why so many

planets exist in the solar system. It's possible to explain with evidences: why the solar system exists the way it does; why Mercury and Venus lie between the Sun and Earth, why Venus and Uranus on the second and eighth orbits rotate retrograde, why Venus is made of such a shining material that it appears as the brightest object in the night sky; why it appears in front of us either soon after sunset or just before sunrise, at most convenient viewing angles to watch; why Jupiter is so large and Saturn provided with a ring; why Neptune is blue in colour and Pluto's path intervenes that of Neptune." Nothing in nature happens without a noble and fundamental purpose with a strong causal basis.

Almost four years ago he first talked to us about the solar system. He explained on several occasions: there's a clear reason why the asteroids aren't combined to form a planet in the 5th orbit. The rules for the first four planets forming the first set of terrestrials, and the next four constituting the second set of gaseous planets are entirely different. Pluto and any other celestial body we may detect in future follow a completely different set of rules. Those days when he talked to us about Pluto, we all believed it to be the 9th planet. Now, when IAU has decided to reclassify Pluto as a dwarf planet, it appears as a great proof of his statements. He says that although the IAU's recent resolution of reclassifying Pluto from its initial status of a planet is right, corrections are necessary in its other resolutions. There's a specific reason why we were taught to write the digits 1, 2, 3, .. the way we write them. There are several layers of hidden inner principles that exist throughout nature. Strict mathematical principles govern the organisation of genes in human DNA too. Abdul Khader leads a simple life; likes to spend most of his time in solitude, pondering over nature. This is written in his presence. This letter contains only a very small part of what he has conveyed so far. A team of highly competent intellects with strong scientific background and clear logical reasoning needs to be formed at once. Yours sincerely, M Ameen (sgd)

029 Director/Executive Committee, Intl Psychological Associations (4 Sep 2006)

Dear Sir, Copies of our recent letter to the President of India and

various office bearers of Intl Astronomical Union are enclosed. These discuss certain extremely important, serious matters concerning the entire humankind. The topics Abdul Khader discusses pertain to all realms of life, science, technology, mathematics, history and human mind, from a completely different, unfamiliar viewpoint. The entire humankind is in pitch darkness now; there must be a way to restore justice and peace on Earth with the right understanding of nature and principles behind its creation. The whole universe including nature around us, plants and animals function smoothly without conflicts. Humankind also needs to live in harmony with themselves and nature. With the exposure of these universal facts, many new branches of science will be born. Until now, science tells us how things work; it'll begin to describe why they exist and function in those specific ways. His elucidations are logical and precise. He constantly demands the presence of a team of highly talented scientists, mathematicians and psychologists. He can explain to the team with substantial proof starting from fundamentals. Once the group is formed and learning begins, close interactions with reputed universities and research centres will be essential.

All scientific progresses made so far were necessary for this imminent phase of Revealing Wisdom to be grasped. Soon all religions will join hands and realise the ultimate fact that all of us are alike. We breathe the same air, drink the same water, use the same sunshine, and live on the same planet. Just as there is no religion or caste anywhere among the entire plant and animal kingdom or even among our physical bodies, there can't be any such division among human mind, the most distinctive creation in the universe. Human mind is about to be defined clearly. Abdul Khader is a very rare specimen a mind-expert will eagerly look forward to studying. By listening to him, an expert psychologist will know both the topics he discusses and state of his mind that enables him to dwell deep into intricate and hidden areas. Yours sincerely, M Ameen (sgd)

030 Director, NIMHANS, Bangalore, India (6 Sep 2006)

Dear Sir, Copies of our recent letters to the President of India and

the Intl Astronomical Union are enclosed. These discuss extremely important serious matters concerning the entire humankind introduced by Abdul Khader who resides in Calicut. Matters he discusses pertain to all realms of life including science, mathematics, history and human mind from an unfamiliar perspective. The entire humankind is in absolute darkness now; there must be a way to restore peace and justice on Earth with right understanding of nature and its principles. Humankind can't continue to fight with one another and spread trouble; they need to live in harmony, with themselves, nature and other species. With the exposure of these universal truths many new branches of science will be born. So far, science tells us how things work; now it begins to describe why they exist that way. He speaks with clear logical sequence, fluency and consistency. A team of highly talented scientists, mathematicians and psychologists are necessary to understand him. He can elucidate before such a team with substantial proofs various facts mentioned starting from the basics. Once such a group is formed and the learning begins, close interactions with different international universities and research centres will be necessary. All technological progresses made so far were essential for this phase of change to begin. Soon all religions will join hands and will realise the ultimate reality that all of us are alike. Just as we don't find any religion or caste anywhere among the entire plant and animal kingdom, there can't be any such division among the human mind, the most intelligent of all creations in the universe. Human mind is about to be defined in its true factual form.

Abdul Khader is a truly rare specimen which a mind-expert will look forward to studying eagerly. By listening to him, a keen psychologist can study both the matter he describes and the state of his mind that enables him to dwell deep into such intricate areas of utmost significance that remained completely hidden. He constantly demands the presence of a few experienced psychologists from the time he met us. He asks for experts in various branches of science and mathematics. Such competent experts may find it easier to comprehend him and what he describes due to the sheer unfamiliarity and of the matter and the high level of complexity

involved. Yours sincerely, M Ameen (sgd)

031-032 Directors, Discovery Communications and Natl Geographic Channel (14 Sep 2006)

Gentlemen, This is in continuation to three other letters: to the President of India, the executive committees of IAU, and NIMHANS, Bangalore (copies enclosed). These discuss certain fundamental matters related to the universe and our abode Earth, along with its geography, plant and animal species. Several faculty of the neighbouring universities have been listening to Abdul Khader for the past few years. The topics he discusses concern all branches of science and mathematics from a perspective we're unaware of. He says: there are basic principles underlying creation of the universe, galaxies, stars, planets and other celestial bodies. Creation of animals, birds, insects and plants on Earth are based on very specific but hidden inner principles we can understand with the exposure of this phase. Every species is created with a sublime purpose related to the functioning of human mind in a subtle way. Introduction of new species and their extinction are likewise based on laws linked to human mind. It's for this purpose that some species needed frequently are kept close to us as pets or domestic animals, and those needed rarely are kept away in thick jungles or under deep oceans. This is how we organise books: those needed regularly arranged on study table and those needed rarely kept away in libraries. We continue to study about animals, their habitats, eating and mating behaviours and migration patterns with much attention. Channels such as Natl Geographic and Animal Planet bring vivid motion pictures of plant and animal kingdom to our homes. All this was necessary to take the next step, discovering inner principles behind creation. Why each species is created thus: An elephant with its peculiar shape, size and strength, thickness of its skin, how its nails look as if glued to its feet directly without fingers, and its unusually long nose, the trunk, that's filled with mucus and dirt including own sweat. The elephant can drink water only after taking it up in its trunk first. Thus it can only drink dirty water all along. Also, as the trunk swings close to the ground it can inhale only unclean air with dirt raised by its own movement in

herd. Why is the elephant destined thus? Although these questions lie outside the purview of science today, they've precise, unambiguous and important answers. It's possible to know why we have 23 (not 22, 24 or any other) pairs of chromosomes. The forthcoming wisdom provides answers to these questions with substantial evidences and will become an indispensable source of priceless wisdom. He constantly demands a team of exceptionally talented experts from various branches of science, maths, biology and psychology from the time he met us. All the technological and scientific progresses made so far were essential for this phase to begin. Among other experts, well-versed biologists (botanists and zoologists) too are needed. People with high intellect and scientific background may be able to grasp this emerging wisdom easier in the beginning. Yours sincerely, M Ameen (sgd)

Dear Sir, (sent to all the above)

We've sent several important letters to heads of nations, universities and institutes all over the world during the last one month. Copies of our letters to President of India, IAU, NIMHANS, National Geographic and Animal Planet Channels are enclosed. These letters give an outline and discuss most significant fundamental matters related to humankind introduced by Abdul Khader residing in

Calicut. The topics he discusses are of utmost importance and relate to all Divine Scriptures and particularly, the Quran. He says: The Quran has several hidden layers of meanings. It functions on its own at predetermined times and is opening a significant phase now. Many of its inner meanings are getting exposed. Meaning of the special letters at the beginning of several chapters (Hurooful Muqattaat) are getting completely interpreted. These letters act as the 'source code' from which the Quran blossoms the way a flower blooms out of a bud. "That is the Book", the Quran states close to one such occurrence, implying that understanding them correctly is critical to the understanding of Quran. The meaning of these letters remained a mystery for the past 1400 years. Quran mentions the appearance of more evidences after a time (Q38:88, Q41:53). With the advent of the new phase extremely significant new branches of science will emerge. So far, science has been telling us how things work; it'll begin to describe why they exist in those specific ways. Quran is the handbook of nature; we can 'read' Quran from nature and nature from Quran. He hastens to add that he's just an ordinary individual who's made instrumental. He reminds us that 'guessing' isn't permitted in interpreting Quran (Q10:36). The only thing God did violating the laws of nature was the creation of Jesus, son of Mary. Jesus will be made a very important subject to the Christians and the entire humankind (Q19:21). It's possible to logically explain the great signs given to Moses (Q20:17-23), the miracles of Solomon's Castle (Q27:44), the event of Jonah being swallowed by the fish (Q21:87), and many other Quranic narrations. The verse starting with 'Sibghathallah' (Q2:138) has profound meaning and pertains to colouring in nature. With this, colour will be defined absolutely; we'll recognise colour as the most important Book of Law to be obeyed. It's necessary to bring out inner meanings of several verses of Quran describing the creation of Earth and heavens in six days.

There's a very specific reason why the "Bismillah" has been removed from Ch:9 Thowbah of Quran. Animal and plant species have been created to teach essential principles to humans. A large number of occurrences in Quran exist where deeper inner meanings are seen. It's most important to bring these indispensable truths to

the entire humankind at once. Arabic, much more than a language, was slowly but steadily developed through ages to bring out Quran. God taught us numeric values of Arabic letters, a way to relate language and numbers that started with Hebrew during the period of Moses. Every word in Arabic, is a hidden formula. The presence of Hurooful Muqattaat points to this. A team of highly competent intellects well-versed with Arabic and Quran, with strong scientific background and sharp logical reasoning is needed to understand him and convey the Message to humankind. Yours sincerely, M Ameen (sgd)

049 Mr Sanal Edamaruku, Rationalist Intl, India (30 Oct 2006)

Dear Sanal, We write this to bring to your attention certain extremely important, serious matters concerning the entire humankind. We've sent letters to more than 50 important centres all over the world. They include letters sent to President of India and several heads of nations, UN, research centres (such as NASA, IAU and WWF), and many renowned universities. The matter concerns the entire human race and has the solution to grave issues facing humanity: issues related to corruption and lawlessness, terrorism and fundamentalism, destruction of nature and environment, spread of superstitious beliefs and deceptions by godmen and miracle mongers. Wisdom of a new kind beyond the purview of present-day science is getting revealed that provides in-depth scientific insight into fundamental definition of mathematics, hidden reasons behind why colour accompanies matter always, why such a vast variety of species exist on Earth, why water is made up of hydrogen and oxygen with atomic numbers 1 and 6, and why other planets and asteroids exist in the solar system besides our home planet the Earth.

We're introduced to this by Abdul Khader. Matters he discusses are all in unusually high plane and are of utmost importance to humanity. A few faculty from neighbouring institutions have listened to him for considerable amount of time. He talks about maths and colour as languages through which nature talks to us. Everything is made up of three basic ingredients: space, time,

consciousness. These three unseen constituents are denoted by the three basic colours red, green, blue. The Earth shows these colours: a form of red in the soil, green in its vegetation, and blue in the sky (and in the oceans). This threesome is also seen in the three states of matter (solid, liquid, gas), and in the three categories of species (those living under water, on land, in air). It's possible to explain with proof why the solar system exists the way it does. Why planets Mercury and Venus exist before Earth and why Venus and Uranus rotate retrograde; why Venus is made up of such a shining material that it appears as the brightest object in the night sky, why it appears either immediately after sunset or just before sunrise and at a convenient angle to watch, why Jupiter is so large and Saturn has a spectacular ring, why Neptune is blue and Pluto's path intervenes that of Neptune. There is a specific reason why we were taught to write the digits 1, 2, 3, .. the way we write them. Several layers of hidden inner rules exist throughout nature. Strict mathematical principles govern the organisation of genes in human DNA too. It's possible to explain why an atom consists of a central nucleus and orbiting electrons, the nucleus has positively charged protons and electrically neutral neutrons; why the negatively charged electrons are of negligible mass and are in motion and why there are 2 or 8 valence electrons in inert materials. Nothing in nature occurs without a noble and fundamental purpose. He can elucidate answers to these questions with clear proof to a group of talented intellects and scientists. Almost 4 years ago he first talked to us about the solar system. The rules for the 4 terrestrial planets forming the first set and the next 4 forming the gaseous ones are entirely different. Pluto and other celestial bodies existing beyond Neptune follow a different set of rules. He explained to us on several occasions that there is indeed a clear, comprehensible reason why the asteroids aren't combined to form a planet in 5th orbit. Those days when he talked to us about Pluto, we all believed it to be a planet. Now when the IAU reclassified it as a dwarf planet, it clearly testifies his statements. This matter is difficult to comprehend; more difficult than it was for the first scientist to convince even his fellow scientists that the Earth is round and moving. Earth was flat and stationary only in the minds of people

and the scientist had struggle to make it round and moving only in the minds of his people. The unseen truth behind creation is much harder to perceive than the topics dealt by science today that concerns only the physical universe and depends on observable, tangible facts. Abdul Khader spends time in solitude pondering over nature and its creations. This letter contains only a small part of what he has conveyed so far. Unlike godmen who obstruct their followers from rational thinking, he strongly encourages and strengthens our logical reasoning throughout the association with him. He constantly reminds us that only when one uses his intellect does one qualify to be a human. He demands a group of exceptionally competent intellects from different core branches of science, mathematics, psychology and philosophy. He insists for the presence of a few highly competent psychologists and rationalists in the team. We've sent letters to several psychological associations and to NIMHANS, Bangalore. We urge you to come to Calicut at the earliest and meet him. We need to work together to form a group of exceptionally competent intellects to comprehend matters he discusses and convey it to humankind at the earliest. Yours sincerely, M Ameen (sgd)

050 Dr VS Ramachandran, Univ Calfnia, US (25 Nov 2006)

Dear Ramachandran, We would like to discuss matters of utmost importance related to the functioning of human mind and consciousness. We've been introduced to this by Abdul Khader residing in Calicut, Kerala. A few faculties from different neighbouring universities have listened to him for a considerable amount of time. The matters he discusses are all in an unusually high plane and difficult to understand first. We've sent letters to over 50 important positions including the President of India, reputed organisations (NASA, UN, IAU, WWF) and renowned universities. This concerns the entire world and has the solution to several grave issues facing humanity now. The Revealing Wisdom provides scientific and spiritual insight into fundamental definitions of mathematics, hidden reasons behind why matter is accompanied by colour always, why a vast variety of species exist on Earth, why

water is made of hydrogen and oxygen, why other planets exist in solar system besides Earth, and why the planets Venus and Uranus rotate retrograde. Each of these is beyond the purview of the present-day science. This also provides a profound definition of the human mind and consciousness. In this regard, we've sent a letter to Prof Penrose (at Oxford). My mathematician friend Dr Vijayarajan mentioned about you and said you'll certainly be interested in this matter and that you're a person who responds to mails. This is the reason for this short mail. After hearing from you we can send detailed letters. We urge you to respond at the earliest so that we'll know for sure that you've received this letter and that you're interested. Yours sincerely, M Ameen (sgd)

051–054 Letters (29 Nov 2006)

Roger Penrose, Mathemtical Inst, Oxford	Stephan Hawking, Maths, Univ Camb	N Cartwright, Philosophy, L Sch Econ	A Shimony, Philosophy Phys, Boston
---	--	--	--

Dear Sir, (sent to all the above)

As mentioned in my earlier letter to Prof. Penrose, we had sent letters to several renowned research and academic centres all over the world. These letters discuss extremely important and fundamental matters related to the universe and Earth, and concern all branches of science, mathematics, history and psychology, from a totally unknown perspective. We're introduced to this overwhelming flow of wisdom by Abdul Khader in Calicut, Kerala. Several faculty from neighbouring universities have listened to him for a good amount of time. He talks about a phase of science that encompasses all branches of knowledge and reveals inner principles behind creation. It explains at micro and macro levels why things exist the way they do. Principles behind maths, presence of 3 basic colours, creation of plants and animals, insects and microbes, the Sun and Moon, stars and black holes, are all slowly getting unfolded with complete evidence. This phase also exposes misconceptions and superstitions introduced by religions and philosophies, and unites humankind as one community. Just as it's impossible to think of a situation without the concept of zero, this

revealed wisdom is essential to bring peace and harmony to the entire world. The topics he discusses are all in an unusually high plane. Mathematics and colour are the languages of nature. Every creation is made up of three basic ingredients: space-time-consciousness. These 3 unseen constituents are represented by the 3 basic colours: red-green-blue. Earth shows a form of red in the soil, green in its vegetation, and blue in the sky (and in oceans). This threesome is also seen in the 3 states of matter (solid, liquid, gas), 3 categories of species (those living under water, on land, and in air), and 3 constituents of an atom (neutrons, protons, electrons). There's a specific reason why we were taught to write the digits 1, 2, 3, .. the way we write them. Several layers of hidden inner principles exist throughout nature. Strict concealed mathematical principles govern the organisation of genes in human DNA too.

All sciences emanate from mathematics. The mathematics that we deal with has a hidden soul. We're able to use only the physical part of mathematics now. The golden section that exists widely in nature also has a soul. The quantity π is a principle. Geometric shapes such as triangles, rectangles and circles in nature have profound inner meanings. Humankind was taught to draw stars by combining two equilateral triangles. Such a hexagram, Star of David, is a noble symbol for the Jews. Inner principles behind this symbol will be defined with its dignity. This symbol is vital for the entire humanity, and not for Jews alone and is as much scientific as spiritual. It's possible to explain with proof why the solar system exists the way it does: why the Earth shows the marvellous blue colour, why Venus and Uranus rotate retrograde, why Venus the brightest object in the night sky appears either immediately after sunset or just before sunrise at a convenient angle to watch, why Jupiter is so large, Saturn has a magnificent ring, why Neptune is blue and Pluto's path intervenes with that of Neptune. Nothing in nature occurs without a noble, fundamental purpose. He first talked to us about the solar system a few years ago. He explained on several occasions: there is a clear comprehensible reason why the asteroids weren't combined into a planet. The rules for the first 4 terrestrial planets forming the first set, and the next 4 gaseous ones that forms the second are entirely different. Pluto and any other celestial

objects that we may detect in future follow a completely different set of rules. Those days when he talked about Pluto, we all believed it to be a planet. Now when IAU reclassified it as a dwarf planet, we see this as a great proof of his statements. He says that although IAU's recent resolution of demoting Pluto is right, corrections are needed in other resolutions.

He spends most of his time in solitude, pondering over nature. He doesn't take anything for granted and goes with a free mind after any clue from nature. This is being written under his supervision. He says that the entire humankind is in utter darkness at present. Corruption, lawlessness, terrorism and fundamentalism causes destruction of life and wealth. There must be a way to restore justice and peace on Earth with right understanding of nature and its principles. The whole universe functions smoothly without conflict; nature around us, plants and animals, also move in accordance with the universal rules. Human alone can't continue to fight with one another and spread trouble. They too need to live in harmony, with themselves and other creations. A number of significant, new branches of science will be born. So far, science tells us 'how' things work; now it'll begin to describe 'why' each exist the way it does. The logical sequence, fluency, consistency and clarity of his elucidations are spectacular. He never uses vague or imprecise statements.

"There exist basic underlying principles behind the creation of universe, its stars, galaxies, planets and other celestial objects", he says. "The creation of all animals, birds, insects and plants on Earth are also based on very specific but hidden inner principles which we can understand with the exposure of this wisdom. Every species is created with a sublime purpose related to the human mind in a subtle way. The introduction of new species and withdrawal of existing ones are likewise linked to human mind. Thus, species needed regularly are kept close to us as pets or domestic animals. Species, lessons from which are needed occasionally, are kept away in thick jungles or under deep oceans. This is like organising books; those needed frequently are arranged on our study table and those needed rarely are kept away in libraries." So far, we've been studying about animal kingdom, their habitats, eating styles,

mating behaviours and migration patterns with much care and attention. All this was necessary to take up the next step, discovering inner principles of creation. Why each species is created the way we see it? An elephant marvels us by its abnormal shape, size and strength, thickness of skin, how the nails are directly glued to its feet without fingers, and its unusually long nose—the trunk, which is filled with mucus and dirt including its sweat. The elephant can drink water only after taking it up in its trunk first. As the trunk swings close to the ground, the elephant inhales only unclean air that contains dirt raised by its own movement in herds. Why the elephant is destined this way? These questions have precise, unambiguous answers that are very important to know. It's possible to explain why we are created with 23 (not 22, 24 or any other) pairs of chromosomes. These questions lie outside the purview of present-day science. The Revealing Wisdom provides answers to these and deeper questions with substantial proofs and is an indispensable source of wisdom.

This matter is more difficult to understand than it was for the first scientist to convince his people that the Earth is round and moving. Earth was flat and stationary only in the minds of people; the scientist had to make it round and moving, again in the minds of his people. The unseen truth behind creation is much harder to perceive than the observable, tangible facts of physical universe dealt by the present-day science. This phase of wisdom exposes concealed but extremely essential principles behind 'Onkaram' of the Hindus, 'Star of David' of the Jews, 'Ten Commandments' given to Moses, the distinctive birth of Jesus, 'Eightfold Path' of the Buddha, the 'Quran' of the Muslims, and the 'Guru Granth Sahib' of the Sikhs. The true inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This will enable us to know why different religions exist now. Soon all religions will join hands and realise the ultimate reality that all of us are alike. Just as we don't find any religion among the entire plant and animal species, there can't be such divisions among human mind, the unique creation. The human mind is about to be defined in its true form.

Having read some of the books on consciousness and computability by Prof. Penrose, we thought he'll be interested in

knowing this further. This is a new emerging phase of science that sheds light into mysteries behind space-time-consciousness. It can explain secrets behind matter and functioning of the human mind. This paves way to the birth of a new generation of humans, far superior to the existing in terms of unity, intellectual capacity and logical reasoning. It'll eliminate corruption and anarchy, violence and fanaticism, destruction of nature and environment, spread of superstitious beliefs and deceptions by godmen and miracle mongers. As Prof. Penrose rightly guessed, consciousness is non-computable. Since we're unable even to simulate the physical world (as he points out 'a simulated hurricane is no hurricane!'), it's obvious that consciousness is beyond simulation. As a result, technology can never bring out a device that acts as an aid to our 'intellectual reasoning'. The physical world is the gateway to the true understanding of the unseen mental world. All scientific and technological progresses made so far were essential to enter this new phase. A profound change is absolutely essential in our outlook and approach to science to solve deep mysteries behind consciousness. It'll be possible to explain why the physical world is founded on such precise mathematical footing, how perceiving beings arise out of the physical world, and how we're able to comprehend maths. Besides, questions such as 'Is there a theory of everything?', 'Why the theories dealing with the large are so very different from those dealing with the small?' and 'How consciousness can arise from matter, space and time?' will each be completely answered with evidence. This is indeed the emergence of the 'theory of everything' which infiltrates into depths unimaginable to the present-day science. People with strong scientific and math background would be able to grasp this powerful wisdom easier at first. Just as it was unimaginable for the people of the olden times to believe the round moving Earth, it's equally unimaginable for us to think of a flat static Earth. Soon humankind will find it astonishing to learn that once there lived a generation who studied about the physical world without relating them to the most important underlying 'unseen' causal basis. We urge you to ponder over the facts mentioned. This letter contains only a very small part of what Abdul Khader has communicated so far. To comprehend him and

disseminate this unique priceless wisdom to humankind at the earliest we need to form a team of highly competent intellects with scientific background and sharp logical thinking. He constantly demands the presence of experts from various branches of science, maths and psychology from the time he met us first. Yours sincerely, M Ameen (sgd)

055 Sir David Attenborough, BBC-Discovery (4 Dec 2006)

Dear Sir, We've sent important letters to several heads of nations, universities and research centres all over the world. These discuss fundamental matters of greatest significance related to the entire universe and our abode the Earth, along with its geographical layouts, flora and fauna. The topics concern every branch of science, mathematics, history and psychology from a viewpoint that remained completely hidden so far. We're introduced to this overwhelming flow of wisdom by Abdul Khader. Several faculty from neighbouring universities have listened to him for a good amount of time. The matters he discusses are of utmost importance to the entire world and humanity, but are difficult to grasp. He says: Basic underlying principles exist behind formation of the universe, galaxies, stars, planets and other celestial objects. The existence of animals, birds, insects and plants on Earth are based on specific but hidden inner principles that we can understand with this phase. Behind every species is a sublime purpose related to the functioning of human mind in a subtle way. The introduction of new species and the withdrawal of existing ones are likewise based on laws linked to human mind. It's for this purpose that some species necessary for us regularly are kept close to us as pets or domestic animals. Species, the lessons from which are needed only occasionally, are kept away inside thick jungles, under deep oceans or high up on mountain peaks. This is how we organise books; those needed on a regular basis are arranged on our study table; those needed infrequently are kept away in public libraries.

So far, we've been studying about the animal kingdom, their habitats, eating styles, mating behaviours, migration patterns and so on with great care and dedication. TV Channels such as the BBC, Discovery, Animal Planet and National Geographic bring vivid

motion pictures of plant and animal kingdom to the living room of common man. All these knowledge were necessary to take the next step: discovering the inner principles behind the existence of species. Why each species is shaped the way we see it? An elephant has peculiar shape, size, strength, thickness of skin, its nails look as if directly glued to its feet without fingers, and its unusually long 'nose' that contains mucus and dirt including own sweat. The elephant can drink water only after taking it up in its trunk first. As the trunk swings close to ground, the elephant inhales only unclean air with dust raised by its own movement in herds. Why is the elephant destined thus? These questions, though outside purview of present-day science, have precise unambiguous answers that are important for humankind to learn at once. The forthcoming wisdom answers other deeper questions too with clear evidence and will soon become an indispensable source of wisdom.

This phase encompasses all branches of knowledge and reveals inner principles behind nature. It's possible to explain at micro- and macro-levels why things exist the way they do. The principles behind mathematics, the presence of 3 basic colours, existence of plants and animals, insects and microbes, the Sun and Moon, stars and black holes, are all slowly getting unfolded with evidence. This phase exposes misconceptions and superstitions introduced by religions and philosophies and unites humans into one community. Just as it's impossible to think of a situation without the concept of zero, this Revealing Wisdom is absolutely essential to bring peace and harmony to the entire world. The topics he discusses are all in a different and unusually high plane. He talks about mathematics and colour as the language through which nature teaches us. Every object, inanimate or living, is made of three basic ingredients: space, time, consciousness. These three 'invisible' constituents are represented by the three basic colours red, green, blue. The Earth shows these colours: a form of red in the soil, green in foliage, and blue in the sky (and in oceans). This threesome is also seen in three states of matter (solid, liquid, gas), three categories of species (living under water, on land and in air), and three basic constituents of an atom (neutron, proton, electron). There is a specific reason why we were taught to write the digits 1, 2, 3, .. the

way we write them. There exist several layers of hidden inner principles throughout nature. Strict mathematical principles govern the organisation of genes in human DNA too.

All sciences emanate from mathematics. The maths we deal with has a hidden essence or soul. Now we use only its physical part. The golden ratio existing widely in nature also has an essence. The quantity π is a principle. Geometric shapes such as triangles, rectangles and circles in nature have profound inner meanings. Humankind was taught to draw stars by combining two equilateral triangles. Such a star appears as a noble symbol for the Jews, namely 'the Star of David'. The inner principles behind this symbol will be defined with all its dignity. This symbol is vital for the entire humankind, not for the Jewish alone, and it's as much scientific as it's spiritual. The concealed but most important principles behind the distinctive birth of Jesus, 'Ten Commandments' given to Moses, Buddha's 'Eightfold Path', 'Onkaram' of the Hindus, the 'Quran' of the Muslims and concept behind the 'Guru Granth Sahib' of the Sikhs are important for the entire human race and should be made known at once.

We can explain with proof why the solar system exists the way it does: why Earth has the marvellous blue colour as seen from outside; why Mercury and Venus exist before Earth; why Venus and Uranus rotate retrograde; why Venus is made of a shining material that makes it the brightest object in the night sky; why it appears before us either soon after sunset or just before sunrise at convenient angle to view; why Jupiter is so large and Saturn provided with a magnificent ring; why Neptune is blue and Pluto's path intervenes with Neptune's. Nothing in nature occurs without a noble, fundamental purpose. He first talked to us about the solar system a few years ago. He explained on several occasions that there is a clear, comprehensible reason why the asteroids aren't combined into a planet. The rules for the first set of four terrestrial planets, and the second set of four gaseous ones are entirely different. Pluto and any other celestial body we spot in future follow a totally different set of rules. Those days we all believed Pluto to be a planet. Now, IAU's reclassification as a dwarf planet comes as a great proof of his statements. He says that although IAU's

resolution of demoting Pluto is right, corrections are needed in its other resolutions.

Abdul Khader spends time in solitude, pondering over nature and its mysteries. He doesn't take anything for granted and goes with a free mind after any clue from nature however trivial it may appear. He says: When we look around, we see the entire humankind in utter darkness now. There must be a way to restore justice and peace on Earth with the right understanding of nature and its laws. The whole universe functions smoothly without conflicts. Nature around us, plants and animals, also move in accordance with the universal rule. Human beings alone can't continue to fight with one another and spread trouble. They too need to live in harmony, with themselves and with other species. The exposure of these universal truths will result in a number of significant new branches of science. So far, science has been telling us 'how' things work. This phase will shed light on 'why' they exist the way they do. The logical sequence and clarity of his elucidations are truly extraordinary. He never uses vague or inaccurate statements. This matter is more difficult to understand than it was for the first scientist to prove to his people that Earth is round and moving. The Earth was flat and stationary only in the minds of people; the scientist had to make it round and moving, only in the minds of his people. The unseen truth behind creation is harder to perceive than the observable and tangible facts of physical universe dealt by the present-day science. This phase of wisdom will expose the concealed but essential principles behind various forms of existing beliefs. True inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This'll enable us to know why different religions exist now. Soon all religions will join hands; we'll realise the ultimate reality that all of us are alike: we depend on the same sunshine, breathe the same air, drink the same water and live on the same Earth. Just as we don't find any religion anywhere among plant and animal kingdom, there can't be any such division among human mind, the most intelligent of creations. Human mind is about to be defined in true form. It's in this regard that we decided to write to you. He's seen your TV programmes that appear on Discovery Channel. He appreciates your great expertise and dedication. He's noticed your

frequent remark “we have no idea why ..” He says that it’s possible to explain ‘the idea’ behind the truly intricate behaviours of insects and reptiles, flies and birds, wild animals and sharks. This knowledge that enables him to know the hidden ‘idea’ behind such behaviours is the same that enables him to explain the secrets behind atoms at micro-level and planets and galaxies at macro-level. We need, among other experts in various branches of science, well-versed biologists. Highly competent intellects with strong scientific and mathematical background may comprehend this easier at first and disseminate it to the entire human society. Yours sincerely, M Ameen (sgd)

056 Dr APJ Abdul Kalam, Pres of India (18 Dec 2006)

Respected Sir, This is a continuation of our earlier letter sent to you in Aug 2006. We had described about an emerging new phase of science. We thank you for the formal reply from your office in October along with your best wishes. This is written to inform you about some of the subsequent developments. We’re also forwarding a copy of this letter to the Prime Minister Dr Manmohan Singh. During the last couple of months, we’ve sent a few more letters. These include a letter sent to Prof. Roger Penrose, renowned mathematical physicist who happened to be the Chief Guest in a recent convocation ceremony at NIT Durgapur, in Nov 2006; an article sent to the Intl Journal Nature (copy enclosed); and a letter sent to the Intl Rationalists’ Association. This was intended to inform the editors and reviewers of this reputed journal about the appearance of the new phase of wisdom. We’ve mentioned in a later letter to their senior editor that even though this wisdom is exceedingly important and indispensable for the entire humanity for all times to come, it’s difficult to understand. People with high scientific and mathematical background would be able to grasp this easier at first. Just as it is unimaginable for us now to think of a flat, static Earth, it was equally unimaginable for the people of the olden times to conceive the moving globe. In the same way, a time is soon to come when humankind will find it astonishing to learn about us that once lived a generation who studied about physical sciences without relating them to their most important unseen inner

principles. The major difficulty here is: though this wisdom is definitely evidence based, the evidences aren't easy to comprehend. It can be learnt by listening to Abdul Khader continuously for some time. The basic building blocks of this truly extensive topic have to be mastered correctly before advanced concepts and mysteries behind nature and its creations can be grasped. It takes time to understand these basic units as each of them are new and elusive. This demands extraordinary concentration, patience and perseverance. We're aware that we're writing this letter to the most responsible position in our nation. We hope this letter will be treated with due attention the matter deserves. This subject concerns the entire human race and has the solution to several grave issues facing humanity today: issues related to corruption, lawlessness, terrorism and fundamentalism, destruction of nature and environment and spread of superstitious beliefs. Right now the whole world is passing through an extremely difficult situation: fast degradation of climate as indicated by global warming, depletion of potable water, spread of hatred, violence and unrest resulting in destruction of life and wealth. This wisdom is the only ray of hope and we need to hasten to acquire and disseminate it. We hope that the contents of this letter are received with all its dignity. We would like to point out that without sound logic and evidence, no sensible person will ever write letters of this kind to the highest and noblest places on Earth. Yours sincerely, M Ameen (sgd)

057 Dr Manmohan Singh, Pr Minstr India (18 Dec 2006)

Respected Sir, We write this letter to bring to your attention certain extremely important, serious matters concerning our nation and the world. The ancient India is known for its innumerable contributions to science and technology that covered all major branches of human knowledge and activities, including mathematics, astronomy, physics, chemistry, medical sciences and engineering. A new phase of science is emerging from our country now that encompasses all branches of knowledge including science and technology, and reveals inner principles behind nature. It's possible to explain at micro and macro levels why things exist the way they do. This phase exposes misconceptions introduced by

religions and faiths, and unites humans as one community. We're introduced to this overwhelming flow of wisdom by Abdul Khader. The matters he discusses are all in a different and unusually high plane, and are of utmost importance to the entire world and humanity. He says maths and colour are the languages through which nature teaches us. Every object, inanimate or living, is made up of the three basic ingredients: space, time and consciousness, denoted by the three basic colours red, green and blue. Earth shows a form of red in the soil, green in its foliage, and blue in the sky. This threesome is also seen in three states of matter (solid, liquid, gas), and in three species categories (those living under water, on land, flying in air). He likes to spend his time in loneliness, pondering over nature and creations. He doesn't take anything for granted. This matter is more difficult to comprehend than it was for the earliest scientist to prove to his people that the Earth is round and moving. The Earth was flat and stationary only in the minds of people and he had to struggle to make it round and moving, again in the minds of his people. The unseen truth behind creation is much harder to perceive than the topics dealt by present-day science that concerns the observable and tangible physical world. This phase exposes hidden but most important principles behind 'Onkaram' of Hindus, the 'Star of David' of the Jews, the 'Ten Commandments' given to Moses, the distinctive birth of Jesus, 'Eightfold Path' of the Buddha, the 'Quran' of Muslims, and 'Guru Granth Sahib' of Sikhs. We urge you to ponder over facts mentioned in this letter which contains only a small part of what he's conveyed to us so far. We've sent several important letters to renowned universities, research centres and a few heads of nations. Our letter to the President of India and an article sent to 'Nature' are enclosed. As you're aware, a major share of the world's wealth is spent in procurement of armaments and other defence related expenses. Persisting agonies due to starvation, poverty and ill-health can be wiped out from Earth if we could divert this money to the progress of humanity. Right now the whole world is passing through an extremely difficult situation: fast degradation of climate as indicated by global warming, depletion of potable water, and spread of hatred, violence and unrest resulting in destruction of life and wealth. The Revealing

Wisdom is the only ray of hope. We need to grasp it and convey to humankind at once. Yours sincerely, M Ameen (sgd)

058–059 Mr Kofi Annan, Dr Shashi Tharoor, UN (28 Dec 2006)

Dear Sir, *We had sent important letters to several heads of nations, renowned research centres and reputed universities all over the world. These include letters to NASA, IAU, UN, Counter-Terrorism Committee and IPCC. These letters discuss fundamental matters related to humankind and give glad tidings of a Revealing Wisdom essential to establish peace and harmony, universal values of equality and tolerance, human rights and dignity. It'll enable us to resolve crises such as the AIDS epidemic, help us move towards a better organised and more peaceful world, and put an end to violence and warfare. We also enclose our recent letter to the President of India and an article sent to Nature. We've also prepared letters to Johns Hopkins, Oxford and Harvard Universities to be sent in a week.*

Humankind is in utter darkness at present. Corruption, lawlessness, terrorism, fundamentalism and racial discrimination are causing destruction of life and wealth. There must be a way to restore justice and peace on Earth with the right understanding of nature and principles behind its laws. The whole universe functions smoothly without conflicts. Nature around us, plants and animals, too move in accordance with universal rule. Human beings are the only trouble makers on Earth and there must be a way to rescue humanity and the planet. The Secretary-General had rightly pointed out recently that a divided world needs 'a truly United Nations' and that people are to be treated as individual human beings and not as abstractions or mere components of a state. But how do we achieve these vital goals? The new phase of science encompasses all branches of knowledge including science, mathematics, history and psychology, from a perspective that remained hidden until now. This wisdom explains at micro and macro levels why things exist the way they do. Principles behind maths, the presence of three basic colours (red, green, blue), the hidden inner concepts behind plant and animal species, the Sun and

planets, stars and black holes, are all getting unfolded with complete evidence. This phase also exposes misconceptions introduced by religions and beliefs, and unites human beings as one community. Just as it's impossible to think of a situation without the concept of zero, this newly revealed wisdom is absolutely essential to bring peace and harmony to the entire world. We're introduced to this overwhelming flow of wisdom by Abdul Khader. Several faculty from different neighbouring institutions have listened to him for a good amount of time. The matters he discusses are of utmost importance to the entire world and humanity.

The topics he talks about are all in an unusually high plane. He says maths and colour are languages through which nature teaches us. Every object, inanimate or living, is made up of three basic ingredients: space, time and consciousness. These three 'invisible' constituents are denoted by the three basic colours red, green and blue. Earth shows a form of red in the soil, green in its vegetation, and blue in the sky (and in oceans). This threesome is also seen in the three states of matter (solid, liquid, gas); in the three categories of species (living under water, on land, in air); and three constituents of atom (neutron, proton, electron). Basic underlying principles exist behind the creation of universe, stars, galaxies, planets and other celestial objects. Creation of animals, birds, insects and plants on Earth too are based on very specific but hidden inner principles. Every species is created with a sublime purpose that's related to the human mind in a subtle way. The introduction of new species and the withdrawal of existing ones are likewise linked to the human mind. It's for this that some of the species necessary regularly are kept close to us as pets or domestic animals. Species the lessons from which are required rarely are kept away in thick jungles, under deep oceans or high up on mountain peaks. This is like how we organise books; those needed on a regular basis are arranged right on our study tables and those needed infrequently are kept away in libraries. With the exposure of these universal truths the intellects around the world irrespective of their beliefs will start pouring into absolute reality. A number of significant new branches of science will be born. So far, science has been telling us 'how' things work. This phase begins to describe

‘why’ they exist the way they do. The logical sequence, fluency, consistency and clarity of his elucidations are spectacular. During such a long time span in which we heard him talk, he never went back on earlier remarks nor used vague or inaccurate statements.

This matter is more difficult to understand than it was for the first scientist to convince his people that the Earth is round and in motion. Earth was flat and stationary only in the minds of people; the scientist had to make it round and moving, again in the minds of his people. The unseen truth behind creation is harder to perceive than the observable, tangible facts of physical universe dealt by the present-day science. This phase of wisdom exposes the concealed but most essential principles behind the ‘Onkaram’ of the Hindus, the ‘Star of David’ of the Jews, the ‘Ten Commandments’ given to Moses, the distinctive birth of Jesus, the ‘Eightfold Path’ of the Buddha, the ‘Quran’ of the Muslims, and ‘Guru Granth Sahib’ of the Sikhs. The true inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This’ll enable us to understand why different religions exist now. Soon all religions will join hands and realise that all of us are alike. Just as we don’t find any religion or caste anywhere among the entire plant and animal kingdom or even among our physical bodies, there can’t be such division among human mind, the most intelligent creation. Human mind is about to be defined in true form. People with high scientific and mathematical background will find it easier to grasp this at first. Just as it’s unimaginable for us to think of a flat, immobile Earth now, it was equally unimaginable for the people of the olden times to conceive the Earth as round and moving. Soon a time will come when humankind will find it astonishing to learn that there lived a generation who studied physical sciences without relating them to their most important, unseen inner principles. While this is definitely evidence based, the evidences are subtle and difficult to grasp. A team of competent intellects need to listen to Abdul Khader continuously. The basic building blocks of this vast topic need to be mastered slowly before advanced concepts can be grasped. It takes time to understand them as they are new and elusive. This calls for extraordinary concentration, patience and perseverance.

We hope this letter will be treated with due attention the matter

deserves. This concerns the entire human race and has the solution to several grave issues facing humanity now. The whole world is passing through a very difficult situation now: fast degradation of climatic conditions, depletion of potable water, spread of hatred, violence and unrest resulting in destruction of life and wealth. The Revealing Wisdom provides the only ray of hope. We urge you to ponder over facts mentioned; this contains only a very small part of what he's conveyed so far. He constantly demands a team of highly competent experts from various branches of science, mathematics and psychology from the time he met us. Yours sincerely, M Ameen (sgd)

**060 Mr Ban ki-Moon, Secretary-General, United Nations
(5 Jan 2007)**

Dear Mr Secretary-General, We had sent important letters to several heads of nations, renowned research centres and reputed universities all over the world, including NASA, IAU and a few offices of the UN such as the CTC and IPCC. These letters discuss vital and fundamental issues related to humankind and give glad tidings about the emergence of wisdom of a new kind essential to establish peace and harmony, universal values of equality and tolerance, and human rights and dignity. It enables us to confront crises such as the AIDS epidemic, helps us move towards a better organised and more peaceful world and put an end to violence and warfare. Recently we also sent an article to Nature (copy enclosed). We've mentioned in a later letter to a senior editor that although this wisdom is exceedingly important and indispensable for the progress of humanity, it's intricate and so difficult to comprehend. We also enclose our recent letter to the President of India. We've prepared letters to Johns Hopkins, Oxford and Harvard Universities to be sent shortly.

Although we consider ourselves to be modern, it takes just a quick glance around to realise that humankind is in utter darkness at present. Terrorism, fanaticism and the resulting violence are causing destruction of life and wealth. There must be a way to restore justice and peace on Earth with right understanding of nature and its principles. The whole universe functions smoothly

without any conflict. Human beings are the only trouble makers on Earth; there must be a way out to rescue humanity and the planet. The Secretary-General has rightly pointed out in a recent speech that a divided world needs 'a truly United Nations' and that people are to be treated as individual human beings and not as abstractions or mere components of a state. But how do we achieve these vital goals? A new phase of science is emerging, a phase that encompasses all branches of knowledge including science and technology, mathematics, history and psychology, from a perspective that remained completely hidden so far. It makes it possible to explain at micro and macro levels why things exist the way they do. The principles behind mathematics, the presence of 3 basic colours (red, green, blue), hidden inner concepts behind plants and animals, insects and microbes, Sun and planets, stars and black holes are getting unfolded with complete evidence. This phase exposes misconceptions of religions and philosophies and unites humankind into one community. Just as it's impossible to think without the concept of zero, the Revealing Wisdom is absolutely essential to bring peace and harmony to the entire world.

We're introduced to this great flow of wisdom by Abdul Khader in Calicut, India. He wanted to discuss certain very important issues concerning nature and humankind. A few of the faculty from different neighbouring universities in Calicut have listened to him for a good amount of time. The matters he discusses are of utmost importance to the entire world and humanity and are in a different and unusually high plane. He says that mathematics and colour are the language through which nature teaches us. Everything is made of three basic ingredients: space, time, consciousness. These three 'invisible' constituents are represented by the three basic colours: red, green, blue. The Earth shows these colours. A form of red is seen in the soil, darker green in its vegetation, and blue in the sky (and in the oceans). This threesome is also seen in the three states of matter (solid, liquid, gas), in the three categories of species (those living under water, on land, and in air), and the three constituents of an atom (neutron, proton, electron). "There exist basic underlying principles behind creation of the universe, its stars, galaxies, planets and other celestial objects", he describes. "The

creation of all animals, birds, insects and plants are also based on very specific but hidden inner principles which we can understand. Every species is created with a sublime purpose that is related to the functioning of human mind and its nature in a subtle way. The introduction of new species and the withdrawal of existing ones are likewise based on laws linked to the human mind. It's for this reason that some of the species necessary for our day-to-day life are kept close to us as pets or domestic animals. Species, the lessons from which are needed only occasionally are kept away in thick jungles, under deep oceans or high up on mountain peaks, like how we organise books; those needed on a regular basis are arranged right on our study table and those needed infrequently are kept away in libraries. With the exposure of these universal truths intellects around the world irrespective of their beliefs will begin pouring to the absolute reality. A number of significant new branches of science will be born. So far, science has been telling us 'how' things work. With the unfolding of this new phase, it begins to describe 'why' they exist the way they do". The logical sequence and clarity of his elucidations are spectacular and truly extraordinary. He never uses vague or imprecise statements.

This is more difficult to understand than it was for the earliest scientist to prove to people that the Earth is round and moving. The unseen truth behind creation is much harder to perceive than the present day science concerning the physical universe that depends on observable tangible facts. This phase exposes concealed but most important principles behind 'Onkaram' of the Hindus, 'Star of David' of the Jews, 'Ten Commandments' given to Moses, the distinctive birth of Jesus, 'Eight-fold Path' of the Buddha and the 'Quran' of the Muslims. The true inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This'll enable us to know why different religions exist now. Soon all religions will join hands. Just as there's no religion anywhere among the entire plant and animal species or our physical bodies, there can't be any such division among the unique human mind. Human mind will be defined in its true form. People with strong scientific background will be able to grasp this easier at first. Slowly it'll reach everyone. Just as it's unimaginable now to think of a flat, static Earth, it was

equally unimaginable for people of the olden times to conceive Earth as round and moving. Soon a time will come when humankind will find it astonishing to learn that once lived a generation who studied physical sciences without relating them to their most important, unseen inner principles. While this is indeed evidence based, it's subtle and difficult to grasp. It can be learnt by listening to Abdul Khader continuously for a time. The basic building blocks of this vast topic have to be mastered before advanced concepts and mysteries behind nature and its creations can be understood. It takes time to learn these basic units as each of them are completely new and elusive. This calls for extraordinary concentration, patience and perseverance.

We're aware that we're writing this letter to one of the very responsible positions in the world. We hope this letter will be treated with due attention it factually deserves. Without sound logic and confidence, no sensible person will write such letters to the highest and noblest positions on Earth. This in itself should be adequate as proof. The matter concerns the entire human race and has solution to several grave issues facing humanity now. Right now the whole world is passing through an extremely difficult situation: fast degradation of climatic conditions and global warming, depletion of potable water, spread of hatred, violence and unrest, and abrupt technological advancements such as the developments in nuclear research threatening very existence of the planet itself. The Revealing Wisdom is the only available ray of hope. We urge you to ponder over the facts mentioned in this letter which contains only a very small part of the information conveyed by him. In order to disseminate this unique, precious knowledge to the entire humankind at the earliest we need to form a team of experts consisting of talented individuals with high intellectual calibre. He constantly demands the presence of experts with exceptional competence in various branches of science, technology, mathematics, astronomy, philosophy, theology and psychology from the time he met us first. Yours sincerely, M Ameen (sgd)

061–064 Letters (7 Jan 2007)

CF Patten,	Derek Bok,	W Brody,	S McCutcheon,
------------	------------	----------	---------------

Chancelr, Oxford Univ, UK	Presd, Harvard Univ, US	Presd, Johns Hopkins Univ	V Chnclr, Unv Auckld
---------------------------------	----------------------------	------------------------------	-------------------------

We witness the emergence of wisdom of utmost significance to science and humanity. Abdul Khader, living in Calicut, Kerala, approached us nearly 3 years ago, looking for a team of highly talented intellects specialised in various branches of science. A few faculty from neighbouring universities listened to him for a good amount of time. We realise that this is the unfolding of a new phase of science that encompasses all branches of knowledge and reveals inner principles behind the origin and evolution of the universe. It's possible to explain at micro- and macro-levels why things exist the way they do. The principles behind mathematics, the reason for the presence of three basic colours, mysteries behind the existence of millions of plant and animal species, insects and microbes, the unique and peculiar trajectories followed by the Sun and the planets, and the hidden secrets behind stars and black holes are getting exposed with clear evidence. Just as it's impossible to think of a situation without the concept of zero this Revealing Wisdom is realised to be most essential to bring peace and harmony to the entire world.

A number of important letters have been sent to several heads of nations (including the President and Prime Minister of India), renowned research institutes and reputed universities all over the world. These letters give glad tidings of the forthcoming wisdom that can bring unimaginably great changes to the entire world. There is one main difficulty: it isn't easy to comprehend this at first. This is similar to the difficulty of the earliest scientist who discovered the Earth to be round and moving. Far greater intricacy is involved to show that there is an unseen but extremely important wisdom behind all physical objects and species in the universe and their functioning. An entirely different methodology and approach are necessary. The topics he discusses are all in an unusually high plane. He talks about mathematics and colour as the language through which nature teaches us. "Every object, living or inanimate, is made up of three basic ingredients: space, time and consciousness", he explains. These three 'invisible' constituents are

represented by the three basic colours red, green and blue. The Earth shows a form of red in the soil, green in its vegetation, blue in the sky (and in seas). This threesome is also seen in the three states of matter (solid, liquid, gas), in the three categories of species (living under water, on land, and in air), and the three basic constituents of an atom (neutrons, protons, electrons). Several layers of hidden inner concepts exist throughout nature. Strict but concealed mathematical principles govern the organization of genes in human DNA too. All sciences emanate from maths. Now we use only the physical part of maths. It has a hidden essence or soul. The golden ratio underlying nature has an unseen, most important essence. The quantity π is a principle. Geometric shapes like triangles, rectangles and circles in nature have profound inner meanings. Humankind was taught to draw stars by combining two equilateral triangles. Such a star, 'Star of David', is a noble symbol for the Jews. The inner principles behind this symbol will be defined with all its dignity. This symbol is vital for the entire mankind, and not for Jews alone, and it's as much scientific as it's spiritual. Similarly, the concealed but extremely significant principles behind 'Onkaram' of the Hindus, the 'Ten Commandments' given to Moses, the distinctive birth of Jesus, the 'Eightfold Path' of the Buddha, the 'Quran' of the Muslims, and the 'Guru Granth Sahib' of the Sikhs are each very important for the entire humankind and should be made known at once. For the occurrence of day and night, the Sun and Earth alone would have been adequate. It's possible to explain with proof why the solar system exists the way it does. Why the Earth shows the marvellous blue when seen from outside and why Mercury and Venus exist before Earth; why Venus and Uranus (at 2nd and 8th orbits) rotate retrograde. The 2 and 8 also appear as valence electrons in inert materials. Why the surface of Venus is made of a shining material that makes it the brightest object in the night sky; why it appears either soon after sunset or just before sunrise at convenient viewing angles; why the Earth, the only planet with life in the solar system is provided with a single moon; why Jupiter is the largest and Saturn has its magnificent, colourful rings that makes it the jewel of the solar system; why Neptune is blue and Pluto's path intervenes that of Neptune. These questions

arise from their known answers. Nothing in nature occurs without a fundamental reason.

It was a couple of years ago that he first talked to us about the solar system: there is a clear and comprehensible reason why the asteroids aren't combined into a planet. The rules for the first four terrestrial planets forming the first set, and the next four gaseous ones forming the second are entirely different. Pluto and other celestial objects we may spot in future follow a completely different set of rules as compared to these eight planets. Those days when he talked to us about Pluto, we all believed it to be a planet. Now the IAU's decision to reclassify it as a dwarf planet comes as a great proof of his statements. He says that although IAU's resolution of demoting Pluto from its initial status of a planet is right, corrections are necessary in its other resolutions. He likes to spend his time in solitude, pondering over nature and its creations. He doesn't take anything for granted and goes with a free mind after any clue from nature however trivial it may first appear. If one looks around one realises that the entire humankind is in utter darkness at present. There must be a way to restore justice and peace on Earth with the right understanding of nature and its principles. The whole universe functions smoothly without conflicts; nature around us, plants and animals also move in accordance with the universal rule; human beings too need to live in harmony, with themselves and with nature. With the exposure of these universal truths intellects around the world irrespective of their beliefs will begin pouring into the absolute reality. A number of significant, new branches of science will emerge. So far, science has been telling us 'how' things function. With the advent of the forthcoming phase, it commences to describe 'why' they exist the way they do. The logical sequence and clarity of his elucidations are spectacular. There is something very distinctive regarding him and the matter he talks about.

Basic underlying principles exist behind formation of the universe, its galaxies, stars, planets and other celestial objects. The existence of all animals, birds, insects and plants on Earth are based on very specific but hidden inner principles which we can understand with the exposure of this wisdom. Every species carries

with it a sublime principle that's related to human mind in a subtle way. The introduction of new species and withdrawal of existing ones are likewise based on laws linked to the development of human mind. It's for this that some of the species needed for our day-to-day life are kept close to us as pets or domestic animals. Species the lessons from which are required occasionally are kept away in thick jungles or under deep oceans. This is like arranging books—those needed regularly kept on study table, those needed rarely away in libraries. We've been studying about the animal kingdom, their habitats, eating and mating behaviours and migration patterns with much care. This knowledge is necessary to take up the next step of discovering the inner principles behind life. Why each species exists the way we see it? An elephant, for example, is peculiar with its abnormal shape, size and strength, thickness of skin, the way nails look as though directly glued to its feet without the fingers, and its unusually long nose, namely the trunk, which contains mucus, dirt and own sweat. The elephant can drink water only after taking it up in its dirty trunk first. Also, as the trunk swings close to the ground, it can inhale only unclean air containing dust raised by own movement in herds. The natural question is: why the elephant is destined thus. It's possible to explain why we were created with 23 (not 22, 24, or any other) pairs of chromosomes. The forthcoming wisdom provides answers to deeper questions with substantial proofs, and will soon become an indispensable source of wisdom. It's possible to explain the intricate reason behind the peculiar and completely different reproductive systems of human male and female. While the female reproductive system produces just an ovum per month periodically, the male releases millions of sperms at a time. Besides, while the eggs are produced even in the absence of male, sperms are naturally produced when sexually aroused by a female. This phase of knowledge enables us to recognise why different religions exist now. Soon all religions will join; we'll realise the ultimate reality that all of us are alike. Just as we don't find any religion anywhere among the entire species or among our own physical bodies, there can't be any such division among the human mind, the most intelligent of all creations. The human mind is about to be defined in

its true form.

This phase exposes the true ‘theory of everything’ which infiltrates into unimaginable depths. Just as it was unthinkable for the people of one time to realise the round moving Earth, it’s equally unimaginable to visualise a flat, static Earth now. A time is soon to come when humankind will find it astonishing to learn that there lived a generation who studied about the physical world without relating it to the most important, underlying unseen reality. We urge you to ponder over the facts mentioned. As the Chancellor of one of the oldest and most reputed world universities, you have a major responsibility. This contains only a very small part of what we’ve heard from him. To comprehend and disseminate this Revealing Wisdom to entire humankind at the earliest we need to form a team of highly competent intellects with clear logical reasoning and strong scientific background. Yours sincerely, M Ameen (sgd)

065 Mr D Nussbaum, Ch Exec, Transprncy Intl (16 Jan 2007)

Dear Mr Nussbaum, We had sent extremely important letters to several heads of nations (including President of USA, Prime Minister of UK, President of India); renowned research institutes (such as NASA, IAU and WWF); reputed universities (including Oxford, Harvard and Johns Hopkins); and many important organisations (such as UN, IPCC and CTC). We’ve also prepared letters to judiciary (President of Intl Court of Justice, Chief Justice of India) to be sent this week. These letters discuss fundamental issues related to humankind and give glad tidings about the emergence of wisdom of a new kind. This will enable us to establish peace and harmony, universal values of equality and tolerance, human rights and dignity. We also had sent an article to Nature, and had mentioned in a later letter to their senior editor that while this is exceedingly important and indispensable for the progress of entire humanity for times to come, it’s indeed difficult to comprehend. Copies of our letter to the President of India and the article to Nature are enclosed here.

Humankind is in utter darkness now. Fraud, corruption and

lawlessness are affecting even the developed countries. Terrorism, fundamentalism, ethnic or racial discrimination and subsequent violence cause destruction of life and wealth. Every peace-lover earnestly looks for a way out of these persisting miseries. Organisations such as yours are doing everything possible to improve the fast degrading present state of affairs. There's also the deterioration of world climate at an alarming rate along with depletion of potable water and spread of epidemics. Is there any ray of hope left? Do we have practical solutions and remedies to address these extremely grave problems? A new phase of science is emerging now that encompasses all branches of knowledge including science and technology, mathematics and psychology, from a perspective that remained completely hidden so far. Principles behind mathematics, the reason for the presence of 3 basic colours in nature, the hidden concept behind everything that we see around us including plants and animals, planets and stars, galaxies and black holes, are all slowly being uncovered with complete evidence. This phase also exposes misconceptions introduced by religions and philosophies and unites humans as one community. Just as it's impossible to think of a situation without the concept of zero, the Revealing Wisdom is absolutely essential to bring peace and harmony to the entire world.

We're introduced to this overwhelming flow of wisdom by Abdul Khader who resides in Calicut, Kerala. He was looking for a team of highly talented intellects from different areas of science. A few faculty from different neighbouring universities and organisations have listened to him for a good amount of time. The topics he discusses are all in an unusually high plane and are of utmost importance to the entire world and humanity. "A number of significant, new branches of science will soon be born", he says. "So far, science has been telling us 'how' things work. With this phase, it begins to describe 'why' they exist the way they do". The logical sequence, fluency, consistency and clarity of his elucidations are spectacular. There is something extraordinary regarding him and the matter he discusses. He says: mathematics and colour are the languages through which nature teaches us. Every object, inanimate or living, is made of 3 basic ingredients: space, time,

consciousness. These 3 'invisible' constituents are denoted by the 3 basic colours red, green, blue. The Earth shows a form of red in the soil, green in its vegetation, and blue in the sky (and in ocean). This threesome is also seen in the 3 states of matter (solid, liquid, gas); 3 categories of species (those living under water, on land, in air); 3 constituents of atom (neutron, proton, electron); and hidden behind countless other natural phenomena.

This matter is more difficult to comprehend than it was for the earliest scientist to convince his fellow beings that the Earth is round and moving. The Earth was flat and stationary only in the minds of his people and the scientist had to make it round and moving only in their minds. The unseen truth behind creation is much harder to perceive than the topics dealt by present-day science that deals with the physical universe and so depends only on observable, tangible facts. This phase exposes the concealed but most essential principles behind the 'Onkaram' of the Hindus, the 'Star of David' of the Jews, the 'Ten Commandments' given to Moses, the distinctive birth of Jesus, the 'Eightfold Path' of the Buddha, the 'Quran' of the Muslims, and the 'Guru Granth Sahib' of the Sikhs. The true inner meanings behind uncorrupted parts of all divine scriptures will be explained. This will enable us to understand why different religions exist now. Soon all religions will join hands; we'll realise the ultimate reality that all of us are alike. Just as we don't find any religion or caste anywhere among the entire plant and animal kingdom or even among our physical bodies, there can't be any such division among human mind, the most distinctive of all creations. The human mind is about to be defined in its true and highly exalted form. People with high scientific and mathematical background may grasp this easier at first. Slowly it'll reach everywhere. Just as it's unimaginable to think of a flat static Earth now, it was equally unimaginable for the people of earlier times to conceive the Earth as round or moving. In the same way, soon a time will come when humankind will find it astonishing to learn that once lived a generation who studied the physical sciences without relating them to their most important unseen inner principles. While this is definitely evidence based, the evidences aren't easy to comprehend at first as they're subtle and

difficult to understand. It can only be understood after listening to him for an amount of time. A team of exceptionally competent intellects is essential to understand him and disseminate this priceless wisdom. The basic building blocks have to be mastered one after the other before advanced concepts and mysteries behind nature and its creations can be appreciated. It takes time to comprehend the basic blocks of wisdom as each of them are new and elusive. It calls for extraordinary concentration, patience and perseverance.

We hope this letter will be treated with due attention and dignity the matter deserves. This concerns the entire human race and has the solution to several grave issues facing humanity today: issues related to corruption and lawlessness, terrorism and fundamentalism, destruction of nature and environment, and spread of superstitious beliefs and deceptions by miracle mongers. Right now the whole world is passing through an extremely difficult situation: fast degradation of climatic conditions and global warming, depletion of fresh water supply, spread of hatred and violence, rapid technological advancements such as developments in nuclear research threatening the very existence of humanity itself. This wisdom is the only ray of hope and we must hasten to disseminate it. We urge you to ponder over facts mentioned in this letter which contains only a small part of what he has conveyed so far. The highest and most profound form of transparency is the one pertaining to the human mind and consciousness. Once that's achieved, corruption will naturally disappear from Earth. This wisdom provides the only way to achieve this sublime form of transparency that will unite the entire human race as one truly unified community. We see a major role your organisation has in this regard and urge you to contact us at once. He constantly demands the presence of experts from various branches of science, mathematics, philosophy, origin of universe and psychology from the time he met us. Yours sincerely, M Ameen (sgd)

066 Justice KG Balakrishnan, Chief Justice of India (22 Jan 2007)

Respected Sir, We had sent extremely important letters to several

heads of nations (including President of US, Prime Minister of UK, President of India); renowned research institutes (NASA, IAU, WWF); reputed universities (including Oxford, Harvard, Johns Hopkins); and several important international organisations (UN, IPCC, Transparency Intl, CTC). These letters discuss very important, fundamental issues related to humankind and give glad tidings about the emergence of wisdom of a new kind. This knowledge will enable us to establish peace and harmony, universal values of equality and tolerance, human rights and dignity. We had also sent an article to Nature. We have mentioned in a later letter to their senior editor that while this wisdom is exceedingly important and indispensable for the progress of the entire humanity for times to come, it's difficult to comprehend at first. Copies of our letters to President of India and President of Intl Court of Justice, and the article to Nature are enclosed for your reference. Humankind is in utter darkness at present. Corruption, fraud and lawlessness are haunting even developed countries. Terrorism, fundamentalism, racial discrimination and subsequent violence are causing destruction of life and wealth. Every peace-lover earnestly looks for a way out of these persisting miseries. Imminent dangers due to deterioration of world climate as a whole at an alarming rate, depletion of potable water and spread of epidemics. Is there a ray of hope left? Do we really have a practical solution to these extremely grave problems?

A new phase of science is emerging now that encompasses every branch of knowledge including science and technology, mathematics and psychology, from a perspective that remained hidden. Principles behind maths, the reason for presence of 3 basic colours in nature, hidden concepts behind everything around us including plants and animals, planets and stars, galaxies and black holes, are all slowly getting uncovered with complete evidence. This phase exposes misconceptions introduced by religions and philosophies and unites humankind as one community. Just as it's impossible to think of a situation without the concept of zero, this Revealing Wisdom is absolutely essential to bring peace and harmony to the entire world.

We're introduced to this great flow of wisdom by Abdul Khader

who resides in Calicut. Matters he discusses are of utmost importance to the entire world and humanity. A few faculty from different neighbouring universities have listened to him for a good amount of time. "A number of significant new branches of science will soon be born", he says. So far, science has been telling us 'how' things work. With the unfolding of this phase, it begins to describe 'why' they exist the way they do. The logical sequence, fluency, consistency and clarity of his elucidations are extraordinary. All those who heard him realise that there's something special regarding him and what he discusses. The topics that he talks about are all in an unusually high plane. He says that mathematics and colour are the languages through which nature teaches us. Every object, inanimate or living, is made up of the three basic ingredients: space, time, consciousness. These three 'invisible' constituents are denoted by the three basic colours red, green and blue. Earth shows a form of red in the soil, green in its vegetation, and blue in the sky (and in the ocean). This threesome is also seen in the three states of matter (solid, liquid, gas); in the three categories of species (under water, on land, in air); the three constituents of an atom (neutron, proton, electron); and behind countless other natural phenomena distributed over the universe.

This is more difficult to understand than it was for the first scientist to prove to his people that the Earth is round and moving. The Earth was flat and stationary only in the minds of people and the scientist had to struggle to make it round and moving, again only in the minds of his people. The unseen truth behind creation is much harder to perceive than the topics dealt by present-day science which deals with the physical universe and depends only on observable, tangible facts. This phase exposes the concealed but extremely significant principles behind the 'Onkaram' of the Hindus, 'Star of David' of the Jews, 'Ten Commandments' given to Moses, the distinctive birth of Jesus, 'Eightfold Path' of the Buddha, 'Quran' of the Muslims, and concept behind 'Guru Granth Sahib' of the Sikhs. The true inner meanings behind uncorrupted parts of all divine Scriptures will be disclosed. This'll enable us to know why different religions exist now. Soon all religions will join hand and will realise the ultimate reality that all of us are alike. We depend

on the same sunshine, breathe same air, drink same water and live on same Earth. Just as we don't find any religion or caste anywhere among the entire plant and animal kingdom or our physical bodies, there can't be any such division amongst the human mind—the most intelligent creation. Human mind is about to be defined in true form. People with high scientific and mathematical background may grasp this easier at first. Slowly it will reach everywhere. Just as it's unimaginable for us to think of a flat, static Earth now, it was equally unimaginable for the people of olden time to conceive Earth as round or moving. A time is soon to come when humankind will find it astonishing to learn that once lived a generation who studied about the physical world without relating them to their most important unseen inner principles.

A team of academically qualified, exceptionally competent individuals with high intellect needs to be formed quickly to learn the Revealing Wisdom and transfer it to humankind. While this is evidence-based, the proofs are subtle and difficult to realise; these can be grasped by listening to him continuously. The basic building blocks have to be mastered before advanced concepts can be learnt. It takes time to learn the basic blocks as each of them are completely new and elusive. This learning process calls for extraordinary concentration, patience and perseverance. We're aware that we're writing this to one of the most responsible positions in our country. We hope this'll be treated with due attention and dignity the matter deserves. It concerns the entire human race and has the solution to several grave issues facing humanity now: fast degradation of climatic conditions, depletion of fresh water, spread of hatred and violence. This Wisdom is the only ray of hope. We urge you to ponder over facts mentioned in this letter which contains only a very small part of what he's conveyed. The most efficient, profound way to enforce law in the world is to establish it in each individual self. After listening to him for years we realise that this wisdom provides the only way to achieve this sublime goal that'll unite human race as one community. He constantly demands the presence of a team of exceptionally competent intellects with strong scientific background and clear logical thinking to learn the Revealing Wisdom and disseminate it to humankind. Yours

sincerely, M Ameen (sgd)

067 President, Intl Court of Justice, Netherlands (22 Jan 2007)

Dear Madam, We had sent letters of utmost importance to several heads of nations (including President of US, Prime Minister of UK, President of India); renowned research institutes (like NASA, IAU, WWF); reputed universities (including Oxford, Harvard, Johns Hopkins); and many other reputed centres (UN, IPCC, Transparency Intl and CTC). These letters discuss fundamental issues related to humankind and give glad tidings about emergence of wisdom of a new kind. This'll enable us to establish peace and harmony, universal values of equality and tolerance, human rights and dignity. Recently we had also sent an article to Nature. We have mentioned in a later letter to a senior editor that though this wisdom is exceedingly important and indispensable for the progress of humanity for times to come, it's difficult to grasp. Humankind is in utter darkness at present. Corruption and lawlessness are haunting even developed countries. Terrorism, fundamentalism, discrimination and subsequent violence are causing destruction of life and wealth. Every peace-lover earnestly looks for a way out of these persisting miseries. There also exist imminent dangers due to deterioration of world climate at an alarming rate, depletion of potable water supply and spread of epidemics. Is there any ray of hope? Do we have a solution to these extremely grave problems?

A new phase of science is emerging now that encompasses all branches of knowledge including science and technology, mathematics and psychology, from a perspective that remained completely hidden so far. Principles behind maths, the reason for the presence of the three basic colours in nature, the hidden concepts behind everything around us, including plants and animals, planets and stars, galaxies and black holes, are all slowly being uncovered with complete evidence. This phase also exposes misconceptions by religions and philosophies and unites humankind as one community. Just as it's impossible to think of a situation without the concept of zero, the Revealing Wisdom is most

essential to bring peace and harmony to the entire world. We're introduced to this overwhelming flow of wisdom by Abdul Khader residing in Calicut, Kerala. He was looking for a team of highly talented intellects from different areas of science to which he could address this most important matter. A few faculty from different neighbouring institutes have listened to him for a good amount of time. "A large number of significant new branches of science will soon be born", he says. "So far, science has been telling us 'how' things work. With the unfolding of this phase, it'll begin to describe 'why' they exist the way they do". The topics he talks about are all in an unusually high plane.

He says mathematics and colour are the languages through which nature teaches us. Every object, inanimate or living, is made up of three basic ingredients: space, time, consciousness. These three 'invisible' constituents are denoted by the three basic colours: red, green, blue. Earth shows these colours. A form of red is seen in the soil, green in its vegetation, and blue in the sky. This threesome is also seen in the three states of matter (solid, liquid, gas); in the three categories of species (living under water, on land and flying in air); the three constituents of atom (neutron, proton, electron); and behind myriad natural phenomena. This matter is more difficult to understand than it was for the first scientist to convince his people that Earth is round and moving. Earth was flat and stationary only in the minds of people; the scientist had to make it round and moving, again only in the minds of his people. The unseen truth behind creation is much harder to perceive than the observable, tangible facts of the physical universe dealt by present-day science. This phase of wisdom exposes the concealed but extremely essential principles behind the 'Onkaram' of the Hindus, 'Star of David' of the Jews, the 'Ten Commandments' given to Moses, the distinctive birth of Jesus, the 'Eightfold Path' of the Buddha, the 'Quran' of the Muslims, and the 'Guru Granth Sahib' of the Sikhs. The true inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This'll enable us to understand why different religions exist now. Soon all religions will join hands and will realise the ultimate reality that all of us are alike. Just as we don't find any religion or caste anywhere among the entire plant

and animal kingdom, there can't be any such division among the human mind, the most intelligent creation. The human mind is about to be defined in true form. People with high scientific/mathematical background may grasp this powerful wisdom easier at first. Slowly it'll spread everywhere. Just as it's unimaginable to think of a flat, static Earth now, it was equally unimaginable for the people of earlier times to conceive a round, moving Earth. A time is soon to come when humankind will find it astonishing to learn about us that there lived a generation who studied about physical sciences without relating them to their most important, unseen inner principles. A team of exceptionally competent intellects with clear logical thinking is necessary to learn and convey this wisdom. Though this knowledge is evidence-based, the evidences aren't easy to understand as they're subtle and elusive. The basic building blocks of this truly vast topic have to be mastered correctly to comprehend advanced concepts. This learning process calls for extraordinary concentration, patience and perseverance.

We're aware we're writing this letter to one of the most responsible positions in the world. We hope that this'll be treated with due attention and dignity the matter deserves which concerns the entire human race and has the solution to several grave issues facing humanity today: corruption, lawlessness, terrorism, fundamentalism, destruction of nature, environment, spread of superstitious beliefs. This is the only ray of hope and we need to act at once. We request you to ponder over the facts mentioned here which contains only a very small part of what Abdul Khader has conveyed so far. The most efficient and profound way to enforce law in the world is to establish it in each individual self. After listening to him for years we realise that this wisdom provides the only way to achieve this sublime goal that will unite the entire human race as one community. He's been constantly demanding the presence of experts from various branches of science, mathematics, psychology and law from the time he met us first. Such a team can grasp the Revealing Wisdom and disseminate it to humankind. Yours sincerely, M Ameen (sgd)

068-073 Letters (13 Feb 2007)

<i>Pope Benedict XVI, Apostolic Palace, Vatican, Rome</i>	<i>Pr El-Hassan B Talal, Royal Scientific Society, Jordan</i>	<i>Rabbi René Sirat, Elijah Interfaith Institute, Israel</i>
<i>Dr George Carey, Archbishop of Canterbury, UK</i>	<i>HA Nimah, Royal Inst Inter-Faith Studies, Jordan</i>	<i>Metropolitan Pergamon, Glasgow University, UK</i>

Dear Sir, (sent to all the above)

We write this letter to bring to your attention certain extremely grave realities concerning the whole world. If one looks around one realises that the entire humankind is in utter darkness at present. Corruption, lawlessness, terrorism and fundamentalism are causing destruction of life and wealth. There must be a way to restore justice and peace on Earth with true understanding of God and the principles behind His creation. God created all of us with the same Love and Care. The whole universe functions smoothly without conflicts. Nature around us, plants and animals, also move in accordance with the universal rule. Human beings alone can't continue to fight with one another and spread trouble; they too need to live in harmony, with one another and with nature. A new phase of scientific wisdom is emerging now which will lead humanity towards this noble goal. In this regard, we've sent most important letters to several heads of nations (including President of US, Prime Minister of UK, President of India); renowned research institutes (such as NASA); reputed universities (including Oxford, Harvard, Johns Hopkins); a few outstanding scientists (such as Professors R Penrose and S Hawking); many important organisations (such as the UN, IAU, WWF, IPCC, CTC, and Transparency Intl); and to judiciary positions (President of Intl Court of Justice, Chief Justice of India). These letters discuss fundamental issues related to humankind and give glad tidings of the Revealing Wisdom. This knowledge will enable us to establish amity and concord, universal values of equality and tolerance, and human rights and dignity the world over.

This phase of wisdom encompasses every branch of knowledge including mathematics and science and reveals inner principles behind creation. It explains at both microscopic and macroscopic

levels why things exist the way they do. Principles behind natural numbers and arithmetic, the presence of the 3 basic colours, the creation of plants and animals, insects and microbes, the Sun and the planets, stars and galaxies are all slowly getting unfolded with complete evidence. It also exposes misconceptions introduced by beliefs and philosophies and unites humans as one community. Just as it's impossible to think of a situation without the concept of zero, it's apparent that the Revealing Wisdom is absolutely essential to bring peace and harmony to the entire world. We're introduced to this exceedingly great wisdom by Abdul Khader who resides in Calicut, Kerala. Several faculty from neighbouring universities have listened to him for a considerable amount of time. The matters he discusses are of utmost importance to the whole world and humanity.

The topics he talks about are all in an unusually high plane. Mathematics and colour act as language through which God teaches us. Every creation is made up of three basic ingredients: space, time, consciousness. These three invisible constituents are represented by the 3 basic colours: red, green, blue. Earth shows a form of red in the soil, green in its vegetation, and blue in the sky (and in the ocean). This threesome is also seen in the three states of matter: solid, liquid, gas; in the 3 categories of God's creations: those living under water, on land, and in air; and the 3 basic constituents of an atom: neutrons, protons and electrons. All sciences emanate from mathematics. The maths that we deal with has a hidden soul. At present, we use only the 'material body' of maths. The 'golden ratio' that exists extensively in nature also has a soul; the quantity Pi (π) is a principle. He can define and interpret the factual meanings of geometric shapes such as triangles, rectangles and circles seen in nature. Human was taught to draw stars by combining two equilateral triangles. Such a hexagram, the 'Star of David', appears as a noble symbol for the Jews; it carries a dignified principle unknown to even the Jews; it's most important and essential for the entire humanity, not for the Jews alone, and must be made known immediately.

Why do we have so many planets in our solar system? For the occurrence of day and night, Sun and Earth alone would have been

sufficient. It's possible to explain with proof why the solar system exists the way it does. Why the Earth shows the marvellous blue colour as seen from outer space and why Mercury and Venus exist between the Sun and Earth; why Venus and Uranus rotate retrograde; why Venus is made up of such a shining material that it appears as the brightest in the night sky; why it shines before us either immediately after sunset or just before sunrise at a convenient angle; why Jupiter is so large and Saturn provided with a magnificent ring; why Neptune is blue in colour. Nothing in nature occurs without a noble and profound purpose. There's a specific reason why we were taught to write the numerals 1, 2, 3, etc. the way we write them. There are several layers of hidden inner rules throughout nature. Strict mathematical principles govern the organisation of genes in human DNA too. It was almost 3 years ago that he told us first about the solar system. He described on several occasions that there's a comprehensible reason why asteroids weren't combined to form a planet at 5th orbit. The rules for the first 4 planets which forms the first set, and the subsequent 4 forming the second are completely different", he added. "Pluto and any other celestial object that we may spot beyond Neptune follow a totally different set of rules". Those days when he talked about Pluto, we all believed it to be a planet. The IAU's recent reclassification of Pluto as a dwarf planet comes as an added clear evidence. He says that although IAU's resolution of demoting Pluto from its initial status of a planet is right, corrections are necessary in its other resolutions. Abdul Khader likes to spend his time in solitude, pondering over nature and its creations. He doesn't take anything for granted and goes with a free mind after any clue from nature however trivial it may appear. This letter is prepared under his direction. So far, we've been studying about the animal kingdom, their habitats, eating styles, mating behaviours, migration patterns, and so on with much care and dedication. All these were necessary to take up the next step, discovering the inner principles behind life. Why each species exists the way we see it. An elephant, for example, is peculiar with its abnormal shape, size, strength, thickness of skin, the way the nails look as though directly glued to its feet without fingers, and its unusually long nose, namely the trunk, which

contains mucus, dirt and own sweat. The elephant can drink water only after taking it up in its trunk first. Thus it's ordained to drink dirty water all along. Moreover, as the trunk swings close to the ground, the elephant can inhale only unclean air which contains dust raised by its own movement as it walks in herd. Why we were created with 23 (not 22 or 24, or any other) pairs of chromosomes also has a precise answer. These significant questions lie outside the purview of present-day science. *The Revealing Wisdom* provides answers to other deeper questions too with substantial proofs, and will soon become an indispensable source of wisdom. The complex reason behind completely different reproductive systems of human male and female also gets interpreted. While the female reproductive system produces one egg cell a month periodically, the male releases millions of sperms at one time. Although the eggs are produced even in the absence of males, sperms are produced naturally when sexually aroused by a female. This is realised as the 'theory of everything' that infiltrates into depths unthinkable to the present-day science. People with high scientific/mathematical background may grasp this wisdom easier at first. Soon, it'll spread everywhere. Just as it was unimaginable for the people of the olden times to believe the round, moving Earth, it's equally unimaginable for us now to think of a flat, static Earth. Likewise, a time will soon come when humankind will find it astonishing to learn that once there lived a generation who studied physical sciences without relating to the underlying essential reality.

He states that the only thing God did violating the laws of nature was the creation of Jesus, son of Mary. If God destined that to happen, there must be a sublime, tremendously significant reason. By his very birth Jesus is a Holy Book. It's extremely important to expose the truth behind his birth at once. Jesus will be made a very important subject to the entire humankind, not to the Christians alone. Nearly 3 years ago, he accidentally found his thoughts getting connected to the Quran (from Malayalam translation, as he doesn't understand Arabic language). He says the Quran has several hidden layers of meanings and is opening up a new phase now. Many of its inner meanings including the special letters in the beginning of several chapters ('hurooful muqattaat') are being

completely interpreted. These letters remained a mystery for the past 1400 years, and act as the 'source code' from which the Quran blossoms the way a flower blooms out of a bud. The Quran is the 'handbook' of nature. We can 'read' Quran from nature and nature from Quran. These facts first appear in his mind and he sees them in Quran much later. He also says that the above principles can be seen in the unaltered verses of all Divine Scriptures including the Vedas, Torah and Bible which were revealed sequentially from the same One God for the benefit of the entire humankind, and not to any specific locality, community or time. Answers to fundamental questions such as: why Jesus came soon after Moses, why one more prophet (Muhammad) after Jesus, and why Jesus wasn't given the last Scripture (Quran). These questions are posed from the knowledge of their precise answers. He says that with the exposure of these universal truths, intellects irrespective of beliefs will start pouring into the absolute reality. A number of new branches of science will be born. So far, science explains 'how' things work; with the unfolding of the new phase, it'll begin to describe 'why' they exist the way they do. He hastens to add that he's an ordinary man; he's just being made instrumental. He keeps reminding that 'guessing' of any sort is prohibited in interpreting any Divine Book. The 'Onkaram' of the Hindus, has profound inner meanings. It's possible to explain why it was given as the 'pranava manthra' and why were its followers taught to write it in Sanskrit the way it is written. The secrets of this 'manthra' must be exposed immediately for the benefit of the whole world as it's tremendously significant and indispensable. In the same way, the Buddha's 'Eightfold Path' contains principles meant for the whole of humankind. The secret of why they were precisely 'eight' in number and why they were given at the time of Buddha can be explained with substantial proofs. In addition, the true inner meanings of the uncorrupted parts of all Divine Scriptures will be explained. We'll then know why different religions exist now. Soon all religions will join hands and will realise the ultimate reality that all of us are alike; we depend upon the same sunshine, breathe the same air, drink the same water and live on the same Earth. Just as we don't find any religion or caste anywhere among the plant and animal kingdom, or our physical

bodies, there can't be such division among human mind, the most distinct creation. Human mind will be defined in true form. No religion can exist at any point of time without God's permission; hence every existing religion has an important purpose to serve. Each religion unknowingly holds with untiring energy to a priceless principle essential for the benefit of the entire humankind. This is like constructing an edifice. Different building materials like stone, timber, metal and tiles are stacked at work site. Some needed aplenty; some in small quantities. Each item is essential irrespective of the quantity, property, or the cost. Once the construction is complete we only see the edifice, not the individual materials. Likewise, all present religions will jointly give rise to 'one single community'. He adds that God teaches His principles through creations. Thus, it's possible to clearly understand that every species depicts a principle of God. Consequently, to preserve nature and its plant and animal species becomes obligatory. The wisdom will unite people from different walks of life, geographical location, culture and beliefs, and will take them towards the absolute truth.

So far it was through prophets and Divine Books that we were provided with spiritual guidance. Now, everything around us, near and far, microscopic and macroscopic, will begin to teach us important universal principles. Unlike godmen who obstruct followers from rational thinking, he urges towards logical reasoning and constantly reminds us that only when one uses the intellect does one qualify to be a 'human'. A team of highly competent scientists, psychologists and theologians with clear logical thinking is necessary to understand him. All the technological progresses made so far were essential for this phase of change to begin. While this knowledge is definitely evidence based, the evidences are subtle and difficult to grasp. It can be understood by listening to him as a team continuously. The basic building blocks have to be mastered correctly before learning advanced concepts. It takes time to understand as each of them are new, intricate and elusive. The learning process calls for extraordinary concentration, patience and perseverance.

We're fully aware that we're writing this letter to highly responsible positions in the world. We hope that this letter will be

treated with due attention and dignity the matter deserves. Without ample proof, no sensible person would write letters of this kind to the highest and noblest places on Earth. This in itself is adequate as proof. This concerns the entire human race and has solution to several grave issues facing us now: issues related to corruption and lawlessness, terrorism and fundamentalism, destruction of nature and environment, spread of superstitious beliefs and deceptions by godmen and miracle-mongers. Right now the whole world is passing through an extremely difficult situation: fast degradation of climatic conditions as indicated by global warming, depletion of fresh water supply, spread of hatred and violence. This wisdom is the only ray of hope and we must act quickly to convey it. We urge you to ponder over the facts mentioned. This letter contains only a very small part of what he has communicated so far. A team of exceptionally competent intellects having strong scientific background must be set up immediately to learn the most important Revealing Wisdom and convey it humankind. Yours sincerely, M Ameen (sgd)

074 Ms Nancy Pelosi, Speaker, US House of Representatives (16 Feb 2007)

Dear Madam Pelosi, We're glad to write this important letter to you, the Speaker of the United States House of Representatives and the highest ranking woman in American history. We had sent letters of excessive significance to several heads of nations (including President of US, Prime Minister of UK, President of India); renowned research centres (NASA, IAU, WWF); reputed universities (Oxford, Harvard, Johns Hopkins); important organisations (such as UN, IPCC and CTC); and judiciary positions (President of Intl Court of Justice, Chief Justice of India). These letters discuss very important, fundamental issues related to humankind and give glad tidings about emergence of wisdom of a new kind. This knowledge will enable us to establish peace and harmony, universal values of equality and tolerance, and human rights and dignity. Recently we had also sent an article to the Journal Nature. Copies of our letters to Sec-General of United Nations and President of India, and the article to Nature are

enclosed. Humankind is in utter darkness at present. Corruption, fraud and lawlessness are haunting even developed countries; terrorism, fundamentalism, discrimination and violence are causing loss of life and wealth. Deterioration of climate at an alarming rate, depletion of potable water and spread of epidemics affect large populations. Every peace-lover earnestly looks forward for a practical solution to these persisting miseries.

A new phase of science that encompasses all branches of knowledge including science and technology, mathematics and psychology from an unknown perspective is emerging now. Principles behind maths, reason for the presence of 3 basic colours in nature, hidden concepts behind everything around us, including plants and animals, planets and stars, galaxies and black holes are all being uncovered with complete evidence. This phase also exposes misconceptions introduced by religions and philosophies and unites human beings as one community. Just as it's impossible to think of a situation without the concept of zero, it's apparent that this newly revealed wisdom is absolutely essential to bring peace and harmony to the entire world. We're introduced to this overwhelming flow of wisdom by Abdul Khader who resides in Calicut, Kerala. He was looking for a team of talented individuals with high intellectual calibre from different areas of science to which he could address this most important matter. Several faculty from different neighbouring institutions and research organisations have listened to him for a good amount of time. The matters he discusses are of utmost importance to the entire world and humanity. "A number of significant, new branches of science will be born", he says. "So far, science has been telling us 'how' things work. Now, with the unfolding of this new phase, it begins to describe 'why' things exist the way they do". The logical sequence, fluency, consistency and clarity of his elucidations are spectacular. It was nearly three years ago that he first talked to us about the solar system. He explained on several occasions that there is a clear and understandable reason why the asteroids were left as asteroids and not combined to form a planet. The rules for the first 4 planets that forms the first set, and the next 4 that forms the second are entirely different. Pluto and any other celestial object that may be spotted in

future follow an entirely different set of rules. Those days when he talked to us about Pluto, we all believed it to be a planet. When the IAU has reclassified it as a dwarf planet, it's evident that this is a great proof of his statements. He says that although IAU's recent resolution of demoting Pluto from its initial status of a planet is right, corrections are necessary in its other resolutions.

He likes to spend most of his time in solitude, pondering over nature and its creations. He doesn't take anything for granted and goes with a free mind after any clue from nature however trivial it may appear first. This matter is more difficult to understand than it was for the first scientist to convince his fellow beings that the Earth is round and that it's in motion. The Earth was flat and stationary only in the minds of people; the scientist had to make it round and moving, again in the minds of his people. The unseen truth behind creation is much harder to perceive than the observable and tangible facts of the physical universe dealt by the present-day science. This phase of wisdom will expose the concealed but most essential principles behind Onkaram' of the Hindus, 'Star of David' of the Jews, the 'Ten Commandments' given to Moses, the distinctive birth of Jesus, 'Eightfold Path' of the Buddha, 'Quran' of the Muslims, and the 'Guru Granth Sahib' of the Sikhs. The true inner meanings behind the uncorrupted parts of all divine Scriptures will be explained. This'll enable us to understand why different religions exist now. Soon all religions will join hands, and we'll realise that all of us are alike. We depend on the same sunshine, breathe the same air, drink the same water and live on the same planet. Just as we don't find any religion or caste anywhere among the entire plant and animal kingdom, there can't be any such division among human mind, the most distinctive creation in the universe. The human mind is about to be defined in its true form. People with high scientific and mathematical background may grasp this powerful wisdom easier at first. Slowly it'll spread everywhere. Just as it's unimaginable for us now to think of a flat, immovable Earth, it was equally unimaginable for the people of the earlier times to conceive the Earth as round or moving. In the same way, soon a time will come when humankind will find it astonishing to learn that there lived a generation who studied about the physical world without

relating them to their most important but unseen inner principles related to their cause.

We're aware that we're writing this letter to a highly responsible position in the world. We hope this will be treated with due attention and dignity the matter deserves. Without ample proofs no sensible person will attempt to write letters of this kind to the highest and noblest positions on Earth. This in itself should be adequate as proof. This matter concerns the entire human race and has the solution to several grave issues facing humanity today. Right now the whole world is passing through an extremely difficult situation and this wisdom provides the only ray of hope. We urge you to ponder over the facts mentioned in this letter which contains only a very small part of what he has communicated to us so far. He constantly demands the presence of experts and intellects from different areas of science, technology, mathematics, psychology and theology from the time he met us first. Yours sincerely, M Ameen (sgd)

075 Prof T.K Oommen, Schumacher Centre, India (20 Feb 2007)

Dear Prof Oommen, We've sent letters of utmost importance to several heads of nations (including Presidents of US and India, PM of UK); renowned research centres (NASA, IAU, WWF); reputed universities (Oxford, Harvard, Johns Hopkins); outstanding scientists (Profs R Penrose, S Hawking); important world organisations (UN, IPCC, CTC, Transparency Intl); and judiciary positions (President of International Court of Justice and Chief Justice of India). These letters discuss very important, fundamental matters related to humankind and give glad tidings about the emergence of wisdom of a new kind. This knowledge will enable us to establish peace and harmony, universal values of equality and tolerance, and human rights and dignity all over the world. Recently we had also sent an article to the journal "Nature". We've mentioned in a later letter to their senior editor that although this wisdom is exceedingly important and indispensable for the progress of humanity for times to come, it's difficult to comprehend first. Copy of our letter to the President of India and the article to

Nature are enclosed. Humankind is in utter darkness at present. Corruption, fraud and lawlessness are haunting even developed countries. Terrorism, fundamentalism, ethnic/racial discrimination and consequent violence are causing destruction of life and wealth. Every peace-lover earnestly looks for a way out of these persisting miseries. Organisations like the UN and its bodies are doing everything possible to improve the fast degradation of the present state of affairs. There's also the deterioration of the world climate as a whole at an alarming rate and depletion of potable water and spread of epidemics. Is there any ray of hope left?

A new phase of science is emerging that encompasses all branches of knowledge including science, mathematics and psychology, from a viewpoint that remained hidden so far. Principles behind mathematics, the reason for the presence of three basic colours in nature, the hidden concepts behind everything including plants and animals, planets and stars, galaxies and black holes are all slowly getting uncovered with proofs. This phase exposes misconceptions introduced by religions and philosophies and unites humankind as one community. Just as it's impossible to think of a situation without the concept of zero, this newly revealed wisdom is absolutely essential to bring peace and harmony to the entire world. We're introduced to this overwhelming flow of wisdom by Abdul Khader who resides in Calicut. He was looking for a team of talented individuals with high intellect from different areas of science; a few faculty and researchers from different neighbouring universities have listened to him for a good amount of time. The matters he discusses are of utmost importance to the entire world and humanity. "A number of significant new branches of science will soon be born", he says. "So far, science has been telling us 'how' things work; it'll begin to describe 'why' they exist the way they do". The logical sequence, fluency, consistency and clarity of his elucidations are spectacular. All who heard him realise there's something special regarding him and what he describes.

The topics that he discusses are in an unusually high plane. He says mathematics and colour are the languages through which nature talks to us. Every object, inanimate or living, is made up of 3 basic ingredients: space, time, consciousness. These 3 'invisible'

constituents are represented by 3 basic colours red, green, blue respectively. The Earth shows these colours. A form of red is seen in the soil, green in its vegetation, and blue in the sky (and in the ocean). This threesome is also seen in the 3 states of matter (solid, liquid, gas); in the three categories of species (living under water, on land, in air); and the 3 constituents of an atom (neutron, proton, electron). This is more difficult to understand than it was for the first scientist to convince his people that the Earth is round and moving. The Earth was flat and stationary only in the minds of people; the scientist had to struggle to make it round and moving, again only in minds of his people. The unseen truth behind creation is much harder to perceive than the topics dealt by present day science that deals with the physical world and depends on observable, tangible facts. This phase exposes the concealed but most essential principles behind 'Onkaram' of the Hindus, 'Star of David' of the Jews, 'Ten Commandments' given to Moses, distinctive birth of Jesus, 'Eightfold Path' advocated by the Buddha, 'Quran' of the Muslims, and 'Guru Granth Sahib' of the Sikhs. In addition, the true inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This'll enable us to understand why different religions exist now. Soon all religions will join hands and will realise the ultimate reality that all of us are alike. Just as we don't find any religion or caste anywhere amongst the entire plant and animal kingdom or even among our physical bodies, there can't be any such division among human mind, the most intelligent creation. The human mind is about to be defined in true form.

People with high scientific and mathematical background will be able to comprehend this powerful wisdom easier at first. Slowly it'll begin to spread everywhere. Just as it's unimaginable for us now to think of a flat static Earth now, it was equally unimaginable for the people of the olden times to conceive the Earth as round or moving. A time will soon come when humankind will find it astonishing to learn about us that once there lived a generation who studied about physical world without relating them to their most important but unseen inner principles. A team of academically qualified individuals with high intellect is to be formed to learn this wisdom and transfer it to the society. Although this knowledge is indeed

evidence based, the evidences aren't easy to understand as it's subtle and elusive. It can be learnt by listening to Abdul Khader for a good amount of time. The basic building blocks of this truly vast topic have to be mastered one after the other correctly before the advanced concepts and mysteries behind nature and its creations can be appreciated. It takes time to understand the basic building blocks as each of them are completely new and elusive. The learning process calls for extraordinary concentration, patience and perseverance.

The whole world is passing through an extremely difficult situation now: fast degradation of climatic conditions, depletion of fresh water supply, and spread of hatred and violence. This wisdom provides the only ray of hope and we need to act immediately to convey it quickly. We urge you to ponder over the facts mentioned in this letter which contains only a very small part of the what he has communicated to us so far. After listening to him for years we realise that this wisdom provides the only way to build another world, a world not dominated by capitalists or imperialists but one where people are treated as individual human beings and not as abstractions or mere components of a state. We urge you to contact us at the earliest and take part in building a team of talented experts with intellectual calibre from different areas of science and mathematics. He has been demanding the presence of experts from various fields of science, mathematics and psychology from the time he met us first. Yours sincerely, M Ameen (sgd)

076 Mr Hasan A Nimah, Dir, RIIFS, Jordan (25 Feb 2007)

Dear Mr Nimah, We're in receipt of your two replies, the first mentioning you were studying the documents from us, and the second stating your regrets that you've no further interest. The matter we discussed is so significant and completely new that we decided to write to, among many other important places all over the world, the "Royal Institute of Inter-Faith Studies". As the Director of this Institute must be informed about this which deals with different existing religions in the world and gives clear directions of the need and methodology of uniting them, we write this to you again. When the first scientist proclaimed that the Earth

is round and is in motion, no one could believe him. Obviously, he wasn't at fault, as we all know now; the people of that time weren't at fault either. They sincerely thought the scientist was insane. This happens with the exposure of any new discovery that shakes the strongly held beliefs of a community or a time and happens now too. Abdul Khader says the Quran has several hidden layers of meanings; it functions on its own at predetermined times and is opening up a new phase now. Many inner meanings are getting exposed. The special letters occurring at the start of several chapters (Hurooful Muqattaat) are getting interpreted. These letters act as the 'source code' from which the Quran emerges the way a flower blooms out of a bud. "That is the Book", Quran states close to one such occurrence, implying that understanding them correctly is critical to comprehending the Quran. For the last 1400 years, the meaning of these letters remained completely hidden. Quran talks about the appearance of more evidences after a time (Q38:88 and Q41:53). With this phase of knowledge, many extremely significant new branches of science will be born. So far, science has been telling us 'how' things work. With this new phase, it'll begin to explain 'why' they exist the way they do. Quran is the 'handbook' of nature. It's possible to 'read' Quran from nature and nature from Quran. Humankind is unaware of these extremely important, genuine facts. He constantly reminds us that any form of speculation isn't permitted in interpreting the Quran (Q10:36).

The only thing God did violating the laws of nature was the creation of Jesus, son of Mary. Jesus will be made a very important subject not only to the Christians but also to the entire humankind (Q19:21). It's possible to explain the great signs given to Moses (Q20:17-23), the miracles of Castle of Solomon (Q27:44), the event of Jonah being swallowed by a fish (Q21:87), and many more descriptions in Quran. The verse of Quran starting with "Sibghathallah" (Q2:138) has extremely profound meaning. It pertains to actual colour seen in nature. With the emergence of this phase, colour will be defined absolutely and we'll realise that colour is a Book of law to be obeyed. It's also necessary to bring out the true inner meanings of several verses of Quran describing the creation of Earth and the skies in six days. There is a specific reason

why the “Bismillah” is removed from Chapter 9 (Thowbah). Animals and plants teach essential principles to human beings. There exists an exceedingly large number of occurrences in Quran where deeper inner meanings are seen. It’s very important to bring out these indispensable truths to the entire humankind at once. With the present understanding of Quran, we can’t answer most of the questions he poses. For example, why is the Quran (to remain as the last Book for all times to come), revealed with the first word “Read” (Iqra’) in a command mode and not in an advice or instructional mode? While God says in many places He created the Earth and the skies in “six days” (Q32:4), in other places He says when He desires anything He just says “Be” and it becomes (Q36: 82). Also in Q32:4 “He mounted the throne after creating the Earth and the skies”. Does this mean He didn’t have a throne before? These questions arise from the knowledge of their answers and can be explained before a team of intellects with strong scientific background and coming from different beliefs, religions, communities and locations, including scholars in Arabic and Quran. The rule to enter the Quranic wisdom is to use one’s intellect. In many places Quran reminds us: ‘aren’t you thinking’. It also forewarns us against speculation. Arabic was steadily developed through ages to bring out the final Book of God, the Quran. God taught numeric values of Arabic letters (Abjad) showing a way to relate language with numbers. Every word in Arabic is a hidden formula and the presence of Hurooful Muqattaat points to this. We urge you to reconsider your decision. Yours sincerely, M Ameen (sgd)

077 Prof Noam Chomsky, MIT Linguistics, US (23 Mar 2007)

Dear Prof Chomsky, We had sent letters of excessive significance to several heads of nations (the Presidents of US and India, PM of UK); renowned research institutes (such as NASA, CERN); reputed universities (including Oxford, Harvard, Johns Hopkins); important organisations (like UN, IAU, WWF, IPCC, CTC); renowned scientists (such as: Profs R Penrose, S Hawking); and judiciary positions (President of Intl Court of Justice, Chief Justice of India). We also sent an article to Journal Nature. These letters

discuss very important, fundamental issues related to humankind and give glad tidings about the emergence of wisdom of a new kind. This Revealing Wisdom will enable us to establish peace and harmony, universal values of equality, tolerance, human rights and dignity all over the world.

Humankind is in utter darkness at present. Corruption, fraud and lawlessness are haunting even developed countries. Terrorism, fundamentalism, discrimination and violence are causing destruction of life and wealth. There is also the deterioration of world climate at an alarming rate, depletion of potable water and spread of epidemics. Every peace-lover earnestly looks for a way out of these persisting miseries. A new phase of science is emerging now that encompasses all branches of knowledge including science, mathematics and psychology from a viewpoint that remained hidden. The principles behind maths, the reason for the presence of 3 basic colours in nature, hidden concepts behind everything that we see around us, including plants and animals, planets and stars, galaxies and black holes, are all slowly being uncovered with evidence. This phase also exposes misconceptions introduced by religions and philosophies, and unites humans as one community. Just as it's impossible to think of a situation without the concept of zero, this newly revealed wisdom is absolutely essential to bring peace and harmony to the entire world. We're introduced to this wisdom of a different kind by Abdul Khader who resides in Calicut, Kerala. He was looking for a team of talented intellects from different areas of science to which he could first address this most important matter. Many faculty from different neighbouring universities have listened to him for a good amount of time. He says: A number of significant, new branches of science will soon be born. So far, science has been telling us 'how' things work. With this phase, it begins to describe 'why' they exist the way they do. The logical sequence, fluency, consistency and clarity of his elucidations are extraordinary. It was nearly 3 years ago that he first talked to us about the solar system. He explained on several occasions that there is an understandable reason why the asteroids were left as such and not combined into a planet. The rules for the first four terrestrial planets which forms the first set, and the next four

gaseous which forms the second are entirely different. Pluto and any other celestial object that may be spotted in future follow a different set of rules as compared to these 8 planets. Those days when he talked about Pluto, we all believed it to be a planet. Now when the IAU reclassified it as a dwarf planet, it's evident that this is a great proof of his statements. Abdul Khader likes to spend most of his time in solitude, pondering over nature and its creations. He doesn't take anything for granted and goes with a free mind after any clue from nature however trivial it appears. This letter is prepared under his direction. This matter is more difficult to understand than it was for the first scientist to convince his fellow beings that the Earth is round and in motion. The Earth was flat and stationary only in the minds of people; the scientist had to make it round and moving, again only in the minds of his people. The unseen truth behind creation is much harder to perceive than the observable, tangible facts of the physical universe dealt by the present-day science. This phase of wisdom will expose the concealed but extremely essential principles behind the 'Onkaram' of the Hindus, the 'Star of David' of the Jews, the 'Ten Commandments' given to Moses, the distinctive birth of Jesus, the 'Eightfold Path' of the Buddha, the 'Quran' of the Muslims, and the 'Guru Granth Sahib' of the Sikhs. In addition, true inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This'll enable us to understand why different religions exist now. Soon all religions will join hands and will realise the ultimate reality that all of us are alike. We depend on the same sunshine, breathe the same air, drink the same water and live on the same Earth. Just as we don't find any religion or caste anywhere among the entire plant and animal kingdom or even among our physical bodies, there can't be any such division amongst human mind, the most intelligent creation. The human mind is about to be defined in true form. People with good scientific and mathematical background may grasp this powerful wisdom at first. Slowly it'll spread everywhere. Just as it's unimaginable now to think of a flat and immovable Earth, it was equally unimaginable for the people of the earlier times to conceive the Earth as round or moving. Soon a time will come when humankind will find it astonishing to learn that there lived a

generation who studied about physical sciences without relating them to their most important inner principles.

We hope this letter will be treated with due attention and dignity the matter deserves. This concerns the entire human race and has the solution to several grave issues facing humanity today: corruption, lawlessness, terrorism, fundamentalism, destruction of nature and environment, and spread of superstitious beliefs. We urge you to ponder over the facts mentioned. He's been constantly demanding the presence of experts from various branches of science, mathematics and psychology from the time he met us. He can elaborate these matters with clear logical evidence in front of such a strong team of intellects and scientists. Yours sincerely, M Ameen (sgd)

078 Member, World Social Forum, Brazil (25 Mar 2007)

Dear Sir/Madam, We had sent most important letters to several heads of nations (including Presidents of US and India, PM of UK); renowned research institutes (like NASA, IAU, WWF); reputed universities (including Oxford, Harvard, Johns Hopkins); outstanding scientists (Prof R Penrose, S Hawking); important organisations (UN, IPCC, CTC, Transparency Intl); and judiciary positions (President of Intl Court of Justice, Chief Justice of India). These discuss fundamental issues related to humankind and give glad tidings of the emergence of wisdom of a new kind. This knowledge will enable us to establish peace and harmony, universal values of equality and tolerance, and human rights and dignity all over the world. We also sent an article to Nature. Humankind is in utter darkness at present. Corruption, fraud and lawlessness are haunting even developed countries. Terrorism, fundamentalism, ethnic and racial discrimination and violence are causing destruction of life and wealth. Organisations such as UN, Transparency International and WSF are doing everything possible to improve the constantly degrading state of affairs. Also exists the deterioration of world climate at alarming rate, depletion of potable water and spread of epidemics.

A new phase of science is emerging that encompasses every branch of knowledge including science, mathematics and

psychology, from a view-point that remained completely hidden so far. Principles behind mathematics, the reason for presence of three basic colours in nature, the concealed but extremely important concepts behind everything that we see around including plants and animals, planets and stars, and galaxies and black holes are being disclosed with evidence. It exposes misconceptions introduced by religions and philosophies and unites humankind into one community. We're introduced to the Revealing Wisdom by Abdul Khader who resides in Calicut, Kerala. Several faculty from neighbouring institutions and research centres have listened to him. He says mathematics and colour are the language through which nature teaches us. So far science has been telling us 'how' things function. It begins to describe 'why' they exist the way they do. Every object, inanimate or living, is made up of three basic ingredients: space-time-consciousness. These 3 are denoted by the 3 basic colours red-green-blue. Earth shows a form of red in its soil, green in foliage, and blue in sky (and in ocean). This threesome is also seen in the 3 states of matter: solid, liquid, gas; in the 3 categories of species: living under water, on land, and in air; the 3 constituents of atom: neutron, proton and electron, and hidden behind countless other natural phenomena.

This is more difficult to grasp than it was for the first scientist to prove to his fellow beings the Earth is round and in motion. The Earth was flat and stationary only in the minds of people; the scientist had to make it round and moving, again only in the minds of his people. The unseen truth behind creation is much harder to perceive than the observable, tangible facts of physical universe dealt by the science now. This phase will expose the concealed but extremely essential principles behind 'Onkaram' of the Hindus, 'Star of David' of the Jews, 'Ten Commandments' given to Moses, the distinctive birth of Jesus, 'Eightfold Path' of the Buddha, 'Quran' of the Muslims, and 'Guru Granth Sahib' of the Sikhs. The true inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This'll enable us to know why different religions exist now. Soon all religions will join hands; we'll realise all of us are alike. We depend upon the same sunshine, breathe same air, drink same water and live on the same Earth. Just as we don't find any

religion or caste anywhere among the entire plant and animal kingdom or even among our physical bodies, there can't be any such division among human mind, the most intelligent creation. The human mind is about to be defined in true form. People with high scientific/mathematical background will be able to comprehend this easier at first. Slowly it'll spread everywhere. Just as it is unimaginable to think about a flat, immovable Earth now, it was equally unimaginable for the people of earlier times to conceive a round, moving globe. A time is soon to come when humankind will find it astonishing to learn about us that there lived a generation who studied about physical sciences without relating them to their most important, unseen inner principles. A team of highly competent intellects is necessary to learn this wisdom and convey it to humankind. Though this knowledge is evidence-based, the evidences aren't easy as they are subtle and elusive. The basic building blocks have to be clearly understood to comprehend advanced concepts. This calls for extraordinary attention, focus and perseverance.

We hope this'll be treated with due attention and dignity. This concerns the entire human race and has the solution to several grave issues facing humanity today: issues related to corruption and lawlessness, terrorism and fundamentalism, destruction of nature and environment, and spread of superstitious beliefs and deceptions. Right now the whole world is passing through an extremely difficult situation—fast degradation of climatic conditions as indicated by global warming, diminution of fresh water supply, spread of hatred and violence. This wisdom provides the only ray of hope and something needs to be done at once to learn it and pass it on to generations. We urge you to ponder over facts mentioned in this letter which contains only a small part of what he has communicated so far. This wisdom provides the only way to build another world, a world not dominated by capitalists or imperialists but one where people are treated as individual humans and not as abstractions or mere components of a state. We see a major role your organisation has in this regard. We urge you to contact us at the earliest. He constantly demands the presence of experts from various areas of science, mathematics, psychology and philosophy

to comprehend him and disseminate it. Yours sincerely, M Ameen (sgd)

PS: Forward this at once to all prominent members of WSF

079-080 President, Interfaith Harmony Foundation, India and President, Indian Council of Cultural Relations (5 May 2007)

Dear Sir, We had sent extremely important letters to several heads of nations (President of US, PM of UK, President of India); renowned research institutes (NASA, IAU, WWF); reputed universities (Oxford, Harvard, Johns Hopkins); outstanding scientists (Profs Roger Penrose, Stephen Hawking); important Intl organisations (UN, IPCC, CTC, Transparency Intl); and judiciary positions (President of Intl Court of Justice, Chief Justice of India). These letters discuss fundamental issues related to humankind and give glad tidings about the emergence of wisdom of a new kind. This will enable us to establish peace and harmony, universal values of equality and tolerance, and human rights and dignity all over the world. We had also sent an article to Nature. Copy of our letter to President of India and article to Nature are enclosed. Humankind is in utter darkness at present. Corruption, fraud and lawlessness are affecting even developed countries. Terrorism, fundamentalism, discrimination and violence are causing destruction of life and wealth. There is also the deterioration of world climate at an alarming rate, depletion of potable water and spread of epidemics. Is there a practical way of uniting hearts of different people fighting against one another? Prime Minister Dr Manmohan Singh remarked during recent inauguration of South Asian Inter-Faith Harmony Conclave in New Delhi, "What makes our civilization great is the fact that it's based on the idea of co-existence of faiths (Sarva Dharma Sambhava)". Is it possible to go farther than this "co-existence" and think about "the fusion of all religions and faiths into one"? When it looks completely impossible even to think about bringing different groups of any one religion together, is it really sensible to imagine joining different religions into "one community"? But if such a goal is achievable, it'll certainly be the noblest. A new phase of science is emerging that encompasses

all branches of knowledge including science, mathematics and psychology from a viewpoint that remained obscure. Principles behind mathematics, the reasons for the presence of the three basic colours in nature, the hidden but extremely important concepts behind everything that we see around us, including plants and animals, planets and stars, galaxies and beyond, are all slowly being uncovered with complete evidence. This phase also exposes misconceptions introduced by religions and philosophies and unites humankind into one community. Just as it's impossible to think of a situation without the concept of zero, it's apparent that this newly revealed wisdom is absolutely essential to bring peace and harmony to the entire world. We're introduced to this overwhelming flow of wisdom by Abdul Khader who resides in Calicut. Several faculty from neighbouring universities have listened to him for a good amount of time. The matters he discusses are of utmost importance to the entire world and humanity. The logical sequence, clarity, fluency and consistency of his elucidations are spectacular and truly extraordinary. The topics he talks about are all in an unusually high plane. He says mathematics and colour are the languages through which nature teaches us. Every object, inanimate or living, is made of three basic ingredients: space, time and consciousness. These three 'invisible' constituents are represented by the three basic colours red, green and blue respectively. Earth shows a form of red in the soil, green in its vegetation, and blue in the sky (and in ocean). This threesome is also seen in the three states of matter (solid, liquid and gas); in the three categories of living beings: those living under water, living on land, and flying in the air; the three constituents of an atom: neutron, proton and electron; and hidden behind innumerable other natural phenomena.

This matter is more difficult to understand than it was for the first scientist to convince his fellow beings that the Earth is round and in motion. Earth was flat and stationary only in the minds of people; the scientist had to make it round and moving, again only in the minds of his people. The unseen truth behind creation is much harder to perceive than the observable, tangible facts of the physical universe dealt by present-day science. This phase of wisdom will

expose the concealed but most essential principles behind 'Onkaram' of Hindus, 'Star of David' of Jews, 'Ten Commandments' given to Moses, the distinctive birth of Jesus, 'Eightfold Path' of the Buddha, 'Quran' of Muslims, and 'Guru Granth Sahib' of the Sikhs. The true inner meanings behind the uncorrupted parts of all divine Scriptures will be explained. This'll enable us to understand why different religions exist now. Soon all religions will join hands and will realise the ultimate reality that all of us are alike. Just as we don't find any religion or caste anywhere among the entire plant and animal kingdom or even among our physical bodies, there can't be any such division amongst human mind: the most intelligent creation. The human mind is about to be defined in its true form. People with strong scientific background may be able to comprehend this wisdom easier at first. Slowly it'll begin to spread everywhere. Just as it's unimaginable for us now to think of a flat immovable Earth, it was equally unimaginable for the people of olden times to conceive the Earth as round or moving. In the same way, a time will soon come when the humankind will find it astonishing to learn that there lived a generation who studied the physical sciences without relating them to their most important, unseen inner principles related to their cause.

A team of competent individuals with exceptionally high intellectual calibre is needed to comprehend the Revealing Wisdom and convey it to humankind. It can be learnt by attentively listening to Abdul Khader as a team. The basic building blocks of this truly extensive topic have to be mastered one after the other before the advanced concepts and mysteries behind nature and its creations can be appreciated. It takes time to understand these basic building blocks as they're completely unfamiliar and difficult to grasp. This learning process calls for extraordinary concentration, patience and perseverance. We hope this letter will be treated with due attention and dignity the matter deserves. This concerns the entire human race and has the solution to several grave issues facing humanity today: corruption and lawlessness, terrorism and fundamentalism, destruction of nature and environment, spread of superstitious beliefs and deceptions. The whole world is passing through an extremely difficult situation now: fast degradation of

climatic conditions, diminution of fresh water, spread of hatred and violence. This Wisdom is the only ray of hope. We need to act at once to propagate it quickly. We urge you to ponder over the facts mentioned in this letter. We see a major role your organisation has in this regard. Yours sincerely, M Ameen (sgd)

081 Prof Yash Pal, Jawaharlal Nehru Univ, India (9 May 2007)

Dear Professor Pal, We had sent extremely important letters to several heads of nations (President of USA, PM of UK, President of India); renowned research institutes (NASA, IAU, WWF); reputed universities (Oxford, Harvard, Johns Hopkins); outstanding scientists (Profs Roger Penrose, Stephen Hawking); important Intl organisations (UN, IPCC, CTC, Transparency Intl); and judiciary positions (President of Intl Court of Justice, Chief Justice of India). These letters discuss very important, fundamental issues related to humankind and give glad tidings about emergence of wisdom of a new kind. This knowledge will enable us to establish peace and harmony, universal values of equality and tolerance, and human rights and dignity all over the world. We also sent an article to Nature. We've mentioned in a later letter to their editors that although this wisdom is exceedingly important and indispensable for the progress of humanity for times to come, it's difficult to comprehend. Copy of our letter to President of India and article to Nature are enclosed. Humankind is in utter darkness at present. Corruption, fraud and lawlessness are haunting even the most developed countries. Terrorism, fundamentalism, ethnic/racial discrimination and consequent violence are causing destruction of life and properties. Every peace-lover earnestly looks for way out of these persisting miseries. Organisations such as the UN, Transparency Intl and World Social Forum are doing everything possible to improve the fast degrading present state of affairs. There is also the deterioration of world climate as a whole at an alarming rate, depletion of potable water and spread of epidemics. Do we have a solution to these grave problems? Is there a practical way to unite hearts of different people fighting against one another?

A new phase of science is emerging now that encompasses all branches of knowledge including science, mathematics and psychology, from a viewpoint which remained obscure. Principles behind mathematics, the reason for presence of three basic colours in nature, the hidden but extremely important concepts behind everything that we see around us including plants and animals, planets and stars, galaxies and beyond, are all slowly being uncovered with complete evidence. This phase also exposes misconceptions introduced by religions and philosophies and unites humankind as one community. Just as it's impossible to think of a situation without the concept of zero, this newly revealed wisdom is absolutely essential to bring peace and harmony to the entire world. We're introduced to this most significant wisdom of a different kind by Abdul Khader who resides in Calicut. He was looking for a team of talented individuals with high intellect from different areas of science to which he could address this most serious matter. Several faculty from different neighbouring universities have listened to him for a good amount of time. The logical sequence, fluency, consistency and clarity of his elucidations are spectacular and extraordinary. The topics that he talks about are all in an unusually high plane. He says mathematics and colour are the languages through which nature teaches us. Every object, inanimate or living, is made up of three basic ingredients: space, time and consciousness. These three 'invisible' constituents are represented by the three basic colours red, green and blue. Earth shows a form of red is seen in the soil, green in its vegetation, and blue in the sky (and in ocean). This threesome is also seen in the three states of matter (solid, liquid, gas); in the three categories of living beings: those living under water, on land, in air; the three constituents of atom: neutron, proton, electron; and hidden behind myriad other natural phenomena.

This matter is more difficult to understand than it was for the first scientist to explain that the Earth is round and is in motion. The Earth was flat and stationary only in the minds of people; the scientist had to make it round and moving only in the minds of his people. The unseen truth behind creation is much harder to perceive than the observable, tangible facts of the physical universe dealt by

present-day science. This phase of wisdom will expose the concealed but extremely essential principles behind the 'Onkaram' of the Hindus, the 'Star of David' of the Jews, the 'Ten Commandments' given to Moses, the distinctive birth of Jesus, the 'Eightfold Path' of the Buddha, 'Quran' of the Muslims, and the concept behind 'Guru Granth Sahib' of the Sikhs. The true inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This'll enable us to understand why different religions exist now. Soon all religions will join hands and will realise the ultimate reality all of us are alike. We depend upon the same sunshine, breathe the same air, drink the same water and live on the same Earth. Just as we don't find any religion or caste anywhere among the entire plant and animal kingdom or even among our physical bodies, there can't be any such division amongst human mind, the most intelligent of all creations. The human mind is about to be defined in true form. People with high scientific/mathematical background may grasp this powerful wisdom easier at first. Slowly it'll spread everywhere. Just as it's unimaginable for us to think of a flat and immobile Earth now, it was equally unimaginable for the people of olden times to conceive Earth as round or moving. Soon a time will come when humankind will find it astonishing to learn that once there lived a generation who studied physical sciences without relating them to their most important, unseen inner principles.

A team of academically qualified individuals with high intellectual calibre and logical thinking needs to be formed to learn and disseminate this revealing knowledge. Even though this is evidence based, the evidence isn't easily understandable as it's subtle and elusive. It can only be understood by listening to Abdul Khader attentively for some time. The basic building blocks have to be mastered correctly before advanced concepts and mysteries behind nature and its creations can be realised. It takes time to grasp the basic blocks as each of them are completely new and subtle. The learning process calls for excessive concentration, patience and perseverance. We hope this letter will be treated with due attention and dignity this matter deserves. This subject concerns the entire human race and has the solution to several grave issues facing humanity today. The whole world is passing

through a very difficult situation now: fast degradation of climatic conditions, diminution of fresh water, spread of hatred and violence. This Wisdom provides the only ray of hope. We urge you to ponder over the facts mentioned in this letter which contains only a very small part of what he has communicated so far. He constantly demands the presence of experts from various areas of science, mathematics and psychology. Yours sincerely, M Ameen (sgd)

o82 Mr P Radhakrishnan, ISRO, India (19 May 2007)

Dear Sir, We had sent extremely important letters to several heads of nations (Presidents of USA and India, and PM of UK); renowned research institutes (NASA, IAU and WWF); reputed universities (Oxford, Harvard and Johns Hopkins); renowned scientists (Profs R Penrose, S Hawking and Y Pal); important international organisations (UN, IPCC, CTC and Transparency Intl); and judiciary positions (President of Intl Court of Justice, Chief Justice of India). These letters discuss very important, fundamental issues related to humankind and give glad tidings about the emergence of wisdom of a new kind. This knowledge will enable us to establish peace and harmony, universal values of equality and tolerance, human rights and dignity the world over. We also sent an article to Nature. Copy of our letter to the President of India and the article to Nature are enclosed.

Humankind is in utter darkness at present. Corruption, fraud and lawlessness are haunting even the most developed countries. Terrorism, fundamentalism, ethnic/ racial discrimination and consequent violence are causing destruction of life and wealth. Every peace-lover earnestly looks forward to a way out of these persisting miseries. Organisations such as UN, Transparency Intl and World Social Forum are doing everything possible to improve the fast-degrading state of affairs. There is also the deterioration of world climate as a whole at an alarming rate along with depletion of potable water and spread of epidemics. Do we really have a solution to these extremely grave problems? A new phase of science is emerging that encompasses all branches of knowledge including science, technology, mathematics and psychology, from a viewpoint

which remained obscure. Principles behind mathematics, the reason for presence of 3 basic colours in nature, the hidden but extremely important concepts behind everything around us including plants and animals, planets and stars, galaxies and beyond are all getting uncovered with complete evidence. This phase also exposes misconceptions introduced by religions and philosophies, and unites humankind as one community. Just as it's impossible to think of a situation without the concept of zero, this newly revealed wisdom is absolutely essential to bring peace and harmony to the entire world. We are introduced to this overwhelming flow of wisdom of a different kind by Abdul Khader who resides in Calicut. He was looking for a team of talented individuals with high intellect from different areas of science to which he could address this most serious matter. A few faculty from different neighbouring institutes have listened to him for a good amount of time. We realise that the matters he discusses are of utmost importance to the entire world and humanity. "A number of significant new branches of science will soon be born", he says. "So far, science has been telling us 'how' things work. Now, with the unfolding of this new phase, it begins to describe 'why' they exist the way they do". The logical sequence, fluency, consistency and clarity of his elucidations are spectacular and extraordinary. All those who have heard him immediately recognise this as a revealed knowledge of immense significance.

The topics he talks about are all in an unusually high plane. He says mathematics and colour are the language through which nature teaches us. Every object, inanimate or living, is made up of 3 basic ingredients—space, time and consciousness. These 3 'invisible' constituents are represented by the 3 basic colours red, green and blue respectively. The Earth shows a form of red is seen in the soil, green in its vegetation, and blue in the sky. This threesome is also seen in the 3 states of matter (solid, liquid, gas); the 3 categories of living beings: those living under water, living on land, flying in air; the 3 constituents of an atom: neutron, proton, electron; and hidden behind so many other natural phenomena. This topic is more difficult to understand than it was for the first scientist to convince his fellow beings that the Earth is round and that it rotates. The Earth was flat and stationary only in the minds of the people and he

had to make it round and moving, again only in the minds of his people. The unseen truth behind creation is much harder to perceive than the topics dealt by the present day science which deals with physical universe and therefore depends on observable and tangible facts.

This phase of wisdom will expose the concealed but extremely essential principles behind the Onkaram' of the Hindus, the 'Star of David' of the Jews, the 'Ten Commandments' given to Moses, the distinctive birth of Jesus, the 'Eightfold Path' of the Buddha, the 'Quran' of the Muslims, and the 'Guru Granth Sahib' of the Sikhs. The true inner meanings behind the uncorrupted parts of all divine Scriptures will be explained. This'll enable us to understand why different religions exist now. Soon all religions will join hands and will realise the ultimate reality that all of us are alike. We depend upon the same sunshine, breathe the same air, drink the same water and live on the same Earth. Just as we do not find any religion or caste anywhere among the entire plant and animal kingdom, there can't be any such division among the human mind, the most intelligent of all creations. The human mind is about to be defined in true form. People with high scientific/mathematical background may grasp this wisdom easier at first. Slowly it'll begin to spread everywhere. Just as it's unimaginable for us now to think of a flat, immobile Earth, it was equally unimaginable for the people of earlier time to conceive the Earth as round or moving. In the same way, soon a time will come when humankind will find it astonishing to learn that there lived a generation who studied physical sciences without relating them to their utmost important but unseen inner principles. A team of academically qualified individuals with high intellect needs to be formed at once. Even though this knowledge is evidence based, the evidences aren't easy to understand as they are subtle, elusive and difficult to grasp. It can be understood by listening to Abdul Khader attentively for a good amount of time. The basic building blocks have to be mastered rightly before advanced concepts and mysteries behind nature and its creations can be appreciated. It takes time to understand these basic building blocks as each of them are completely new and difficult to grasp. This learning calls for extraordinary concentration, patience and

perseverance.

We hope this letter will be treated with due attention and dignity the matter deserves. It concerns the entire human race and has solution to several grave issues facing humanity today: corruption and lawlessness, terrorism and fundamentalism, destruction of nature and environment, spread of superstitious beliefs and deceptions. Right now the whole world is passing through an extremely difficult situation and this wisdom provides the only ray of hope. We need to be act quickly to learn and propagate it quickly. We urge you to ponder over facts mentioned here which contains only a small part of what he has communicated so far. Yours sincerely, M Ameen (sgd)

083-084 Dr K Kasturirangan, Member of Parliament (Rajya Sabha), and Dr Shashi Tharoor, Former UN Under Sec-General (29 Oct 2008)

Dear Sir, *We witness the emergence of wisdom of a new kind that concerns the entire human race and has the solution to several grave issues facing us now: corruption and lawlessness, terrorism and fundamentalism, spread of hatred and violence, fast degradation of climatic conditions, depletion of potable water and spread of superstitious beliefs. Even technological advancements such as nuclear and space research are getting misused, threatening the very existence of humanity itself. Humankind desperately looks for a way out of these miseries. This provides the only ray of hope. We've sent letters of utmost importance to several heads of nations (including Presidents of US and India, PMs of UK and India); renowned research organisations (NASA, IAU, NIMHANS, WWF); reputed universities (Oxford, Harvard, Johns Hopkins); renowned scientists (Profs Roger Penrose and Stephen Hawking); important Intl organisations (UN, IPCC, CTC, World Social Forum and Transparency Intl); and judiciary positions (President of Intl Court of Justice and Chief Justice of India). These letters discuss very fundamental and important matters related to humankind and give glad tidings about the emergence of the new phase of wisdom. This'll enable us to establish peace and harmony, universal values of equality and tolerance, human rights and*

dignity all over the world. We also sent letters to Mr G Madhavan Nair, Chairman, ISRO, and you, Dr Tharoor, over a year ago. This wisdom unfolds a new phase of science that encompasses all branches of knowledge and reveals inner principles behind the very conception of the universe and its evolution. The principles behind natural numbers, the reason for the presence of 3 basic colours in nature, mysteries behind existence of millions of plant and animal species, the unique and peculiar trajectories followed by the Sun and the planets, and the hidden secrets behind stars and black holes are each slowly getting disclosed with complete evidence and interpretation. This phase also exposes misconceptions introduced by numerous philosophies and unites humankind as one community. The whole universe functions smoothly without conflict. Nature around us, plants and animals, also move in accordance with the universal rule. Human too need to live in harmony, with one another and nature. The new phase of scientific insight leads humanity towards this extremely noble goal.

We're introduced to this overwhelming flow of wisdom by Abdul Khader, who resides in Calicut. Several faculty of neighbouring universities have listened to him for a good amount of time. While matters he discusses are of utmost importance to the whole world and humanity they aren't easy to comprehend. This is like the scientist who discovered the Earth is round and moving. Far greater intricacy is involved to realise the unseen facts that exist behind the entire physical universe. A completely different approach and methodology are needed to understand this immensely significant wisdom. The topics he discusses are all in an unusually high plane. He talks about mathematics and colour as the language through which nature communicates with us. Every object, living or inanimate, is made of 3 basic ingredients: space, time and consciousness. These 3 'invisible' constituents are represented by the 3 basic colours red, green and blue. Earth shows a form of red in the soil, green in its vegetation, and blue in the sky (and in the ocean). This threesome is also seen in the 3 states of matter: solid, liquid, gas; in 3 categories of species: living under water, on land, in air; and 3 basic constituents of an atom: neutrons, protons, electrons. Layers of hidden inner concepts exist

throughout nature. Strict but concealed mathematical principles govern the organisation of genes in human DNA too. All sciences emanate from mathematics. The maths that we deal regularly has a hidden essence or soul. At present we use only the material body of maths. The golden ratio that exists widely in nature also has an unseen essence. The quantity π is a principle. Geometric shapes such as triangles, rectangles and circles in nature have profound inner meanings. Humankind was taught to draw stars by combining two equilateral triangles. Such a hexagram appears as a noble symbol for Jews, the 'Star of David'. The inner principles behind this will be defined with all its dignity. It's very important for the entire humankind and not for the Jews alone, and it's as much scientific as it's spiritual. The obscured but extremely central principles behind the 'Onkaram' of the Hindus, the 'Ten Commandments' given to Moses, the 'Eightfold Path' of the Buddha, the distinctive birth of Jesus, the 'Quran' of the Muslims, and the 'Guru Granth Sahib' of the Sikhs are all very important for the entire humankind.

He says nothing in nature occurs without a noble and fundamental purpose. It was more than three years ago that he talked to us about the solar system. He explained on several occasions that there is a clear reason why the asteroids were left as asteroids and not combined into a planet in the 5th orbit. The rules for the first 4 terrestrial planets, and next 4 gaseous planets are entirely different. Pluto and any other celestial objects we may spot in future follow a completely different set of rules. Those days when he talked about Pluto, we all believed it to be a planet. It was much later that the IAU reclassified Pluto as a dwarf planet. He says while IAU's resolution of demoting Pluto from its initial status of a planet is right, corrections are necessary in its other resolutions. When the concept of 'flat Earth' was prevailing, it was impossible to answer questions such as 'Where is the end of the Earth?', 'Why the Sun (and Moon and stars) rises from the East and sets in West to rise up again in East the next morning?' However, as the 'round Earth' concept was put forth, it answered all related questions to complete satisfaction. In the same way, once this Wisdom is introduced, it explains satisfactorily thousands of important questions like 'why there exists three (not 2, 4 or any other) basic

colours in nature', 'why so many religions exist even now', 'why scientific and technological advancements lead to more trouble and disharmony, and not peace and tranquillity', 'why even at this time of great technological progresses certain 'uncontacted' tribes are spotted (in Amazon forests)', and so on. Abdul Khader likes to spend his time in solitude, pondering over nature and its creations. He doesn't take anything for granted and goes with a free mind after any clue from nature however trivial it may appear. So far, science has been telling us 'how' things work. This phase begins to describe 'why' things exist the way they do. "There exist basic underlying principles behind the formation of the universe, its galaxies, stars, planets and other celestial objects", he describes. "The existence of all the animals, birds, insects and plants that we see on Earth are based on very specific but hidden inner principles which we can understand with the exposure of this wisdom. Every species carries with it a sublime principle which is related to human mind in a subtle way. The introduction of new species and the withdrawal of existing ones are likewise based on laws linked to the development of human mind. So far, we have been studying about the animal kingdom, their habitats, eating styles, mating behaviours, and migration patterns, with much care and dedication. This knowledge was necessary to take up the next step—discovering the inner principles behind life. Why does each species exist the way we see it?

It's possible to explain why we were created with 23 (not 22, 24 or any other) pairs of chromosomes. These questions lie outside the purview of present-day science. The Revealing Wisdom provides answers to these and other deeper questions with substantial proof and will soon become an indispensable source of essential wisdom. It's possible, for instance, to explain the intricate reason behind the peculiar and completely different reproductive systems of human male and female. While the female reproductive system produces just one ovum in a month periodically, the male releases millions of sperms at a time. Also, when the ovum is produced even in the absence of a male, sperms are essentially produced when sexually aroused by a female. The unseen truth behind creation is much harder to perceive than the topics dealt by present-day science which deals with the physical universe and therefore depends only

on observable, tangible facts. This phase will provide the much awaited definition of mathematics and elucidate why light is comprised of all colours. The true inner meaning behind uncorrupted parts of all divine scriptures will be explained. This'll enable us to understand why different religions exist now. Soon all religions will join hands; we'll realise the ultimate reality that all of us are alike.

It's possible to explain why the physical world is based on such a precise mathematical footing, how perceiving beings arise out of the physical world, and how we're able to comprehend mathematics. Besides, questions such as 'is there a theory of everything?', 'why the theories of the large are so very different from those of the small?', and 'how is it that consciousness can arise from matter, space and time?' will be completely answered with evidence. People with high scientific/mathematical background may grasp this easier at first. Slowly it'll reach everywhere. Just as it was unimaginable for the people of olden times to believe the Earth as round and moving, it's equally unimaginable to think of a flat, static Earth. Likewise, a time is soon to come when humankind will find it astonishing to learn that once lived a generation who studied physical world without relating them to the most important unseen mental world.

The physical world is the gateway to the true understanding of the mental world. It becomes apparent that all the scientific and technological progresses humankind made so far were absolutely essential to perceive this forthcoming phase of science. A profound change is necessary in our outlook and approach to science in order to solve the deep mysteries behind consciousness. This knowledge can explain the secrets behind matter and functioning of human mind. This understanding will pave way to the birth of a new generation of humankind—a generation far superior to the existing one in terms of unity, intellectual capability and clear logical reasoning. Nearly three years ago, he accidentally found his thoughts getting related to the Quran (from Malayalam translations of Quran, as he doesn't understand Arabic language). He says the Quran has several layers of meanings and is opening up a new phase now. Many of its inner meanings including those of

the special letters that occur in the beginning of several chapters are getting completely interpreted. These remained hidden for the past 1400 years, and act as the 'source code' from which the Quran blooms out. Quran is the 'handbook' of nature. It's possible to 'read' Quran from nature and nature from Quran. These facts first appear in his mind and he sees them in Quran much later. He also says that the above principles can be seen in the unaltered verses of all Divine Scriptures including the Vedas, Torah and Bible which were revealed sequentially from the same one God for the benefit of entire humankind and not to any specific locality, community or time. He says that the 'Onkaram' of the Hindu philosophy, has very profound inner meanings. It's possible to explain why it was given as the 'pranava manthra' and why were its followers taught to write it in Sanskrit the way it's written. The secrets of this 'manthra' must be exposed immediately for the benefit of the whole world as it's tremendously vital and indispensable. Similarly, the Buddha's 'Eightfold path' contains principles meant for the use of the whole humankind. The secret of why they were precisely 'eight' in number and why were they given at the time of the Buddha can be explained with substantial proofs. Also, the true inner meanings behind the uncorrupted parts of all existing divine Scriptures will be explained. This'll enable us to know why different religions exist now. Soon all religions will join hands and will realise the ultimate reality that all of us are alike. We depend upon the same sunshine, breathe the same air, drink the same water and live on the same Earth. Just as we do not find any religion or caste anywhere among the entire plant and animal kingdom or even among our physical bodies, there can't be any such division amongst the human mind, the most intelligent of all creations. The human mind is about to be defined in its true form.

He adds that God teaches His principles through Creations. Thus, it's possible to show that every living being depicts a principle of God. Consequently, to preserve nature with all its species of plants and animals becomes obligatory on humankind. This knowledge will lead to a perfect balance between humankind and nature. The phase will unite people from different walks of life, geographical location, culture and beliefs, and will take them towards the

absolute truth. So far, it was through Prophets and Divine Scriptures that we were provided with spiritual teachings. Now, everything around us begins to teach us extremely important, universal principles. Unlike godmen who obstruct their followers from rational thinking and analysis, he strengthens the listener's intellect and logical reasoning throughout association with him. He constantly reminds us: only when we use the intellect do we qualify to be a true 'human'. A team of exceptionally competent scientists, mathematicians, psychologists and theologians is needed to learn the Revealing Wisdom from him and transfer it to society. All the technological progresses humankind has made so far were essential for this phase of change to begin. While this is evidence-based, the proofs aren't easy to understand as they're subtle and difficult to grasp. The basic building blocks have to be mastered one after the other rightly before advanced concepts and mysteries behind nature and its creations can be appreciated. It takes time to understand the building blocks as each of them are new and elusive. This learning process calls for extraordinary concentration, patience and perseverance. We wish to point out that we are serious persons not accustomed to vain talking or acting. We're aware that we're writing this to responsible positions. We hope this letter will be treated with due attention and dignity the matter deserves. We urge you to ponder over facts mentioned here. This letter contains only a very small part of what Abdul Khader has conveyed so far. To learn and disseminate this priceless knowledge to human society at the earliest a high level team of intellects consisting of exceptionally talented individuals with strong scientific and mathematical background and logical thinking is necessary. Yours sincerely, M Ameen (sgd)

085 Dr APJ Abdul Kalam, Frmr Pres of India (27 Nov 2008)

Respected Sir, We witness the emergence of wisdom of a completely new kind that unites all religions and goes deep into secrets of origin of universe. We had sent a few letters to you during the period of your presidency. We could only receive a formal reply from the President's office along with your best wishes. Two weeks

ago, we read in newspapers that during your recent visit to Thrikkur, Kerala, you had mentioned that a new research needs to be initiated that combines Adi Sankara's interpretation of 'Brahma' with Einstein's unified field theory. This is why we decided to contact you again. Some criticisms also appeared in local newspapers against your remarks. They were pointing out that your saying will only mislead people away from science. In the light of this Wisdom, we're able to appreciate both the truth behind your statements and the sincerity of remarks against you. In this regard, I want talk to you Sir, first over telephone, and later in person. My telephone and mobile numbers are given. I can call you at a time of your convenience. It's necessary to talk in a quiet atmosphere for a good amount of time to understand this completely new and most important topic. At least 3 talks on subsequent days each of approximately one hour duration may be necessary to describe very briefly what we've understood so far from Abdul Khader. I'm enclosing the extract of our earlier two letters sent to you in 2006; I urge you to read them with attention. The matter is elusive and difficult to understand. Just as it was impossible for the people of the olden times to visualise a round and moving Earth, it isn't easy to understand that there lies precise reasons why there exists three basic colours (red, green and blue), why we have so many planets in the solar system, why the Earth is at the third orbit, and why water is made of the flammable hydrogen and the life-supporting oxygen. It requires a different perspective and very strict logical reasoning to appreciate that nothing in the universe exists without a noble reason. The underlying unseen principles relating to causality are getting disclosed for the first time.

This matter deserves the greatest attention, especially from you. You always maintained great thoughts and dreams about our country. We understand that the fast deteriorating scenario in our country (including the alarming news from Mumbai last night), and all over the world related to spread of unrest, terrorism, hatred, corruption, racial and ethnic discrimination and deception can only be prevented by the forthcoming Revealing Wisdom. I'm not writing this letter to get any personal favour from you or from any such dignified positions. I'm a serious person, just as you're,

and this is an extremely serious matter that I want to talk to you. If you think you can be one of the first few to understand this most important matter and convey it to the world to bring peace and prosperity, please do reply or call at the earliest. Yours sincerely, M Ameen (sgd)

o86 Dr R Moag, Asian Studs, Univ of Texas (27 Nov 2008)

Dear Dr Moag, *It was a pleasant experience talking with you in Malayalam. As I was trying to tell you over telephone the other day, we're faced with an unusual and complex situation; we witness the emergence of wisdom of a completely new kind. This concerns the entire human race and has the solution to several grave issues facing humankind today: corruption and lawlessness, terrorism and fundamentalism, spread of hatred and violence, fast degradation of climatic conditions due to global warming, depletion of potable water and spread of superstitious beliefs and deception. Even technological advancements such as developments in nuclear and space research are being misused, threatening the very existence of humanity. Humankind is looking desperately for a way out of these miseries. This knowledge provides the only ray of hope and we need to act once to disseminate it. We've sent letters of utmost importance to several heads of nations (including President of US, PM of UK, President and PM of India); research organisations (NASA, IAU, NIMHANS and WWF); reputed universities (Oxford, Harvard, Johns Hopkins); outstanding scientists (Profs R Penrose, S Hawking); important organisations (UN, IPCC, CTC, World Social Forum, Transparency International); and judiciary positions (President of Intl Court of Justice, Chief Justice of India). These discuss very fundamental and most important issues related to humankind and give glad tidings about the emergence of this new wisdom.*

This knowledge will enable us to establish peace and harmony, universal values of equality and tolerance, human rights and dignity all over the world. We had also sent an article to Nature. We've mentioned in a later letter to one of their senior editors that even though this is exceedingly important and indispensable for the progress of the entire humanity for times to come, it's indeed

difficult to comprehend first. I am enclosing a copy of the article we had sent to Nature. I urge you to go through it. As the topic is difficult to understand at first, you may need to listen to it a few times. I will talk to you later. Yours sincerely, M Ameen (sgd)

087 Dr A S Popel, Johns Hopkins Univ, US (22 Jan 2009)

Dear Dr Popel, We've been listening to Abdul Khader who lives in Calicut, Kerala. Several faculty from neighbouring institutes have listened to him for a good amount of time. The matters he discusses are all in an unusually high plane, and are of great importance to the entire world and humanity. He talks about mathematics and colour as the language through which nature teaches us. Every object, living or inanimate, is made up of the three basic ingredients: space, time and consciousness. These three 'invisible' constituents are represented by the three basic colours red, green and blue. The Earth shows these colours in the soil, in its vegetation, and in the sky. This threesome is also seen in the three states of matter: solid, liquid and gas; in the three categories of living beings: living under water, on land, and in air, and the three basic constituents of an atom: neutrons, protons and electrons. Several layers of hidden inner rationale exist throughout nature. Strict but hidden mathematical principles govern the organization of genes in human DNA too.

All sciences emanate from mathematics. It has a hidden essence or soul. At present we use only its 'material body' of maths. The golden section that exists widely in nature also has an unseen essence. The quantity π is a principle. Geometric forms such as triangles, rectangles and circles seen in nature have profound inner meanings. Humankind was taught to draw stars by combining two equilateral triangles. Such a star appears as a noble symbol for the Jews, namely the 'Star of David'. The inner principles behind this symbol will be defined with all its dignity. This symbol is very important for the entire humankind and not for the Jews alone, and it's scientific as much as it is spiritual. The concealed but extremely important principles behind 'Onkaram' of the Hindus, the 'Ten Commandments' given to Moses, the distinctive birth of Jesus, the 'Eightfold Path' of the Buddha, the 'Quran' of the Muslims, and the

'Guru Granth Sahib' of the Sikhs are all very important for the entire humankind and should be made known immediately. He says that it's possible to explain with proof why the solar system exists the way it does. Why the Earth shows the marvellous blue colour when seen from outside; why Venus and Uranus (on 2nd and 8th orbits) rotate retrograde. The same 2 and 8 appear as valence electrons of inert materials. Why the surface of Venus is made up of such a shining material that makes it the brightest planet in the night sky; why it appears before us either immediately after sunset or just before sunrise at a convenient angle to watch; why Jupiter is so large and Saturn provided with a magnificent ring; why Neptune is blue and Pluto's path intervenes with that of Neptune. These questions arise from his knowledge about their answers. Nothing in nature occurs without a noble and fundamental purpose that lies hidden. It was several years ago that he first talked to us about the solar system. He explained on several occasions that there is indeed a clear and comprehensible reason why the asteroids are left as asteroids and not combined to form a planet. The rules for the four planets forming the first set of terrestrial planets and the next four forming the second gaseous set are entirely different", he explained. "Pluto and other celestial objects that may be discovered in future are based on a completely different set of rules when compared to these set of eight. Those days when he talked to us about Pluto, we all believed it to be the ninth planet. Now the IAU's decision to reclassify Pluto as a dwarf planet comes as a great proof of his statements.

Abdul Khader spends time in solitude, pondering over nature and its creations. He doesn't take anything for granted and goes with a free mind after any clue from nature however trivial it may appear. The Revealing Wisdom will give rise to a number of significant new branches of science. So far, science has been telling us 'how' things work. Now, it begins to describe 'why' they exist the way they do. Basic underlying principles exist behind the formation of the universe, its galaxies, stars, planets and other celestial objects. The existence of all animals, birds, insects and plants that we see on Earth are based on very specific but concealed inner principles which we can understand with the exposure of this wisdom. Every

species carries with it a sublime principle that's related to human mind in a subtle way. The introduction of new species and withdrawal of existing ones too are based on laws linked to the development of human mind. It's for this purpose that some of the species necessary for our day-to-day life are kept close to us in the form of pets or domestic animals. Species the lessons from which are required only once in a while are kept away from us in thick jungles or under deep oceans. This situation is like how we organize books; those that are needed on a regular basis are arranged right on our study tables and those needed infrequently are kept away in public libraries. It's possible to explain the very complex reason behind the peculiar and completely different reproductive systems of human male and female. When the female reproductive system produces just one ovum periodically (in a month), the male releases millions of sperms at one time. While the eggs are produced even in the absence of males, the sperms are produced only when sexually aroused by a female. We've sent several important letters to heads of nations, renowned research institutes and reputed universities all over the world. These letters proclaim glad tidings regarding the birth of this new wisdom which will bring unimaginably beautiful and great changes to the entire world. This is realised as the emergence of the true 'theory of everything' which infiltrates into depths unthinkable to present-day science. People with high scientific/mathematical background only would be able to grasp this powerful wisdom at first. Slowly it'll reach everywhere. Just as it was unimaginable for the people of the olden times to believe in the round, moving Earth, it's equally unimaginable for us now to think of a flat, static Earth. Likewise, a time will soon come when humankind will find it astonishing to learn that once there lived a generation who studied about the physical world without relating them to the most fundamental unseen inner concepts and realities.

This phase of knowledge will enable us to understand why different religions exist now. Soon all existing religions will join hands; we will realise the ultimate reality that all of us are alike. We depend upon the same sunshine, breathe the same air, drink the same water and live on the same planet Earth. Just as we do not find any religion or caste anywhere amongst the entire plant and

animal kingdom or even among our physical bodies, there can't be any such classification among the human mind, the most intelligent of all creations. Human mind is about to be defined in its true form. We urge you to ponder over the facts mentioned in this letter which contains only a very small part of what he has conveyed so far. To grasp and transfer this unique, priceless Wisdom to humankind at once we need to form a team of experts consisting of exceptionally talented intellects with strong scientific background and sharp logical thinking. He has been constantly demanding the presence of experts from various branches of science, mathematics and psychology from the time he met us. He can elaborate these facts with analytical evidence in front of such a team. Yours sincerely, M Ameen (sgd)

o88 Mr Martin L King III, Realizing Dream Inc. (8 Mar 2009)

Dear Mr King, I write this to bring to your notice a matter of utmost importance to humankind. The entire world is in utter darkness at present. Corruption, fraud and lawlessness are haunting even the most developed countries. Terrorism, fundamentalism, ethnic/racial discrimination and consequent violences are causing destruction of life and wealth. Every peace-lover earnestly looks for a way out of these persisting miseries. Organisations such as the UN, Transparency International, World Social Forum, and Realizing the Dream Inc., are all doing everything possible to improve the fast degrading present state of affairs. There is also the deterioration of world climate at an alarming rate along with depletion of potable water and spread of epidemics. Is there any ray of hope left? Do we really have any solution to these extremely grave problems? Is there a practical way to build another beautiful world as in the dreams of your father, Martin Luther King Jr? A new phase of science is emerging that encompasses all branches of knowledge including science, mathematics and psychology from a view point which remained completely hidden so far. The principles behind mathematics, the reason for the presence of 3 basic colours in nature, the obscured but most important concepts behind everything around us,

including plants and animals, planets and stars, and galaxies and black holes, are all slowly being uncovered with evidence. This phase also exposes misconceptions introduced by religions and philosophies and unites humankind as one community.

We've sent important letters to several heads of nations, renowned research centres, reputed universities, outstanding scientists, important organisations and judiciary positions all over the world. This knowledge will enable us to establish peace and harmony, universal values of equality and tolerance, and human rights and dignity all over the world. We've also sent an article to 'Nature', and have mentioned in a later letter to a senior editor that though this wisdom is exceedingly important and indispensable for humanity for times to come, it's difficult to comprehend. A copy of this article is enclosed. We're being introduced to this Revealing Wisdom by Abdul Khader who resides in Calicut. Several faculty from neighbouring universities have listened to him for a good amount of time. He says: so far, science has been telling us 'how' things function. With the unfolding of the new phase, it'll begin to describe 'why' they exist the way they do. Mathematics and colour are the languages through which nature teaches us. Every object, inanimate or living, is made up of 3 basic ingredients: space, time, consciousness. These 3 are represented by the 3 basic colours red, green and blue. Earth shows a form of red in the soil, green in its vegetation, and blue in the sky. This threesome is seen in 3 states of matter: solid, liquid, gas; in 3 categories of species: living under water, on land, and in air; 3 constituents of an atom: neutron, proton and electron; and hidden behind numerous other natural phenomena.

This is more difficult to understand than it was for the first scientist to prove to his people the Earth is round and moving. The Earth was flat and static only in the minds of people; the scientist had to make it round and moving, again only in the minds of his people. The unseen truth behind creation is far harder to perceive than the observable, tangible facts of the physical universe dealt by present-day science. This phase will expose concealed but most essential principles behind Onkaram' of the Hindus, 'Star of David' of the Jews, 'Ten Commandments' given to Moses, the distinctive

birth of Jesus, 'Eightfold Path' of the Buddha, the 'Quran' of the Muslims, and 'Guru Granth Sahib' of the Sikhs. The true inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This'll enable us to know why different religions exist now. Soon all religions will join hands and will realise the ultimate fact that all of us are alike. We depend on the same sunshine, breathe same air, drink same water and live on same planet. Just as we don't find any religion or caste among the entire plant and animal kingdom, there can't be any such division among human mind, the most intelligent creation. Human mind is about to be defined in true form.

People with high scientific/mathematical background may grasp this easier at first. Slowly it'll spread everywhere. Just as it's unimaginable to think of a flat, immobile Earth now, it was equally unimaginable for the people of earlier times to conceive a round, moving Earth. A time is soon to come when humankind will find it astonishing to learn that there lived a generation who studied physical sciences without relating them to their most important, unseen inner principles. A team of highly competent intellects is necessary to learn and convey this to humankind. While this is evidence-based, the evidences aren't easy to understand as they're subtle and elusive. The basic building blocks have to be mastered one after the other to comprehend the advanced concepts. This learning process calls for extraordinary concentration, patience and perseverance. We hope this letter will be treated with due attention the matter deserves. This concerns the entire human race and has the solution to several grave issues facing humanity today: corruption, lawlessness, terrorism, fundamentalism, destruction of nature and environment, spread of superstitious beliefs and deceptions. Right now the whole world is passing through extremely difficult situation: fast degradation of climatic conditions, diminution of fresh water supply, spread of hatred and violence. This wisdom provides the only ray of hope. We urge you to ponder over the facts mentioned in this letter which contains only a very small part of what he has conveyed so far. The Revealing Wisdom provides the only way to build another world not dominated by capitalists or imperialists but one where people are

treated as individual humans and not as abstractions or mere components of a state. We see a major role you and your organization have in this regard. We urge you to contact us immediately. He has been constantly demanding the presence of experts from various branches of science, mathematics and psychology. Yours sincerely, M Ameen (sgd)

o89 Dr A Al-Bemani, VC, Sultn Qaboos Univ (31 Jan 2010)

Dear Dr Al-Bemani, We write this letter to convey glad tidings of a forthcoming revealing knowledge capable of bringing out radical changes to the desperate state of affairs prevailing over the world now. More delightful is the fact that it's emerging from the Quran as a new phase that remained completely hidden during the last 1400 years. We've clear proofs to state that Quran will soon be realised as the leading beacon of light for the entire humankind, without which it's impossible to advance in science or spirituality. This wisdom comes with such logical clarity and overwhelming evidences that it's impossible to deny it from any viewpoint. We also understand that Arabic will be elevated to much greater heights, from one among myriad languages as we perceive it today, to the unique status of a special, highly encrypted system designed by God for bringing out the Quran. We met Abdul Khader who resides in Calicut nearly six years ago. From the very childhood he's been used to thinking deeply and differently. Thoughts which appeared strange and disorganised at first became coherent but intricate and highly significant soon. He started to realise that he's being made instrumental to a great wisdom that's about to revolutionise the entire human race. Several faculties from neighbouring universities have listened to him for a considerable amount of time. The matter he discusses are of utmost importance to the entire world and humanity and are all in an unusually high plane. He talks about mathematics and colour as the language through which God teaches us. Every creation is made up of three basic ingredients: space, time, consciousness. These three are represented by the three basic colours: red, green, blue. The Earth shows these colours in its soil, foliage and sky. This threesome is also seen in the three states of matter (solid, liquid and gas); in the three categories of species:

living under water, on land, and in air; and the three constituents of an atom: neutrons, protons and electrons. There is a specific reason why we were taught to write the numerals 1, 2, 3, etc. the way we write them. Strict mathematical principles, much deeper and subtler than we know now, govern the organisation of genes in human DNA.

“All sciences emanate from mathematics”, he explains. “The maths we deal has a concealed soul. We use only the material body of maths now. The golden ratio which exists in nature also has a soul. The quantity π is a principle. Geometric shapes such as triangles, rectangles and circles in nature have profound inner meanings. Humankind was taught to draw stars by combining two equilateral triangles. Such a star appears as a noble symbol for the Jews, namely ‘Star of David’. The inner principles behind this symbol will be defined with its dignity. This symbol is vital for the entire human race and not for the Jews alone, and that it’s as much scientific as it’s spiritual. Human race is in utter darkness at present. Corruption and lawlessness are the order of the day. Terrorism, fundamentalism and discrimination based on religion or race are causing destruction of life and wealth. Heinous war crimes and genocides become frequent. Though we seem to have advanced much in science and technology, we’re far from being civilised or cultured. From using stones and poisoned arrows as weapons for killing, we’ve ‘progressed’ and developed devastating armaments including weapons of mass destruction. The money that countries earmark for defence is sufficient to wipe out poverty altogether from Earth. We fail to accept ourselves as members of the single species ‘human’ although each of us came here the same way—from a sperm and an egg, live on the same planet, benefit from the same sun, breathe the same air, and drink the same water. It’s obvious that the present-day darkness is much more intense than what has ever been witnessed in the entire human history. Every peace-lover desperately looks for a way out of this extremely difficult situation. Is there any ray of hope visible? The Revealing Wisdom emerges from Quran as a new phase and the only ray of hope. Humankind had to progress so much in physical sciences, technology and mathematics before this wisdom could be comprehended.

A few years ago, he accidentally found his thoughts getting connected to the Quran (from Malayalam translations of Quran, as he doesn't understand Arabic language). He says that the Quran has many hidden layers of meanings. It's alive and functions on its own at predetermined times. It's opening up a new phase now. The Quran needs to be interpreted letter by letter and not word by word, as every letter in Quran is encrypted. Every word in Arabic, when it appears in Quran, is a formula. The presence of special letters (Hurooful Muqatta'at) at the beginning of several chapters points to this great but yet unknown fact. His mind is being taught Arabic and Quran in syllables, not in words. He's able to explain how each word in Arabic have formed, why the grammar and 'thajweed' rules have been kept the way we know them, and why Quran's writing is different from the usual Arabic writing. Arabic has been slowly but steadily developed through ages to bring out the final Book of God. God taught numeric values of Arabic letters; it was initiated during the time of Moses with Hebrew, and completed during Muhammad's time; thus showing a way to relate language and numbers. Many of the inner meanings of Quran are being exposed now with clear evidence. For example, interpretations with proof are given to Hurooful Muqatta'at. These letters act as the source code from which the Quran blossoms the way a flower blooms out of a bud. 'That is the Book', the Quran states next to the first occurrence (Q2:2), implying that understanding them correctly is most important to the comprehension of Quran. The meaning of these letters remained a mystery until now. This is so because God reveals knowledge as He desires. Quran talks about the appearance of more proofs after a period of time (Q38:88). It also says 'We shall show them Our portents on horizons and within themselves until it's evident that this is the Truth' (Q41:53). The beginning of this phase of wisdom is stated unambiguously in numerous locations in Quran. It's soon to become the Book of guidance for the entire humankind, a guidance without which humanity can't advance further. But this guidance calls for extreme care (thaqwa) in everything we do".

We write this to you as per his directions so that you'll do the needful to convey this letter to the Chancellor of the University,

Sultan Qabus. The Sultan may send a team of at least three experts from different branches of science and technology, mathematics, Arabic and Quran, here to meet Abdul Khader and get to know the preliminary details regarding this most serious matter directly. This is so important that it calls for urgent action. It's a great occasion in which God reveals a new phase of Quran. Quran is not for the Muslims alone; it's for the entire humankind and has the power to unite all existing religions and communities into one. We see strong evidences that we're being lead to that beautiful reality of a single community (Q21:92, Q23:52). He asked us to also inform that if the Sultan isn't inclined to extend help he must inform us so quickly. All matters related to this will get recorded in history. Quran states unambiguously: "the Moon has split asunder" (Q54:1). The significance of what this verse implies is explained with complete proof, in agreement with scientific understanding and logical perception. Why the Earth, the only inhabited planet in the solar system, has just one moon while other planets such as Jupiter and Saturn with no life have dozens? The markings on Moon as seen from Earth are also being elucidated with evidence. The reason for the description of 'people of the cave' (Q18:9-22) will be explained in front of a team of researchers. Why several chapters of Quran bear names of animals and insects (Ch: 2, 16, 27, 29, 105); why each plant and animal species is created and what important lessons they teach humankind; why nineteen guards of the hell (Q74:30) is mentioned will each be causally explained. There are many instances in Quran where logic and reasoning seem to fail. It's mentioned in many places: God created Earth and the skies in six days (Q32:4). It also mentions: if He wishes to do anything, He just commands, "be", and it becomes (Q36:82). It's possible to explain this seeming contradiction with logical clarity. There are several occurrences in Quran which defies common sense. Many Quranic verses have been incorrectly understood so far and contain sublime unexposed truths. It's possible to explain: the great signs given to Moses (Q20:17-23), the miracles of the Castle of Solomon (Q27:44), the event of Jonah swallowed by fish (Q21:87); the birth, death and 'resurrection' of Jesus, son of Mary (Q19:33); and many other Quranic narrations. He says Jesus will be made a very

important sign not only to Christians but to entire humankind (Q19:21).

He says: it's possible to explain with proof why the solar system exists the way it does. Why the Earth shows the marvellous blue colour when seen from outside and why Mercury and Venus exist between the Sun and Earth; why Venus and Uranus rotate retrograde and Venus is made of such a shining material that it's seen as the brightest object in night sky; why it appears before us either soon after sunset or just before sunrise at an angle convenient to watch; why Jupiter is so large and Saturn given a magnificent ring; why Neptune is blue and Pluto's path intervenes with that of Neptune. Nothing in nature occurs without a noble and fundamental purpose. There's a comprehensible reason why asteroids weren't combined into a planet in 5th orbit. The rules for the first 4 terrestrial planets and the next 4 gaseous are different. Pluto and any other celestial object that we may spot in future follow a completely different set of rules. Those days when he talked to us about Pluto, we all believed it to be a planet. Much later, when the IAU reclassified it as a dwarf planet, it confirms his statements. He adds that the reason why each planet in solar system exists with the specific size, position, trajectory and speed can be explained with clear Quranic proofs.

The Quran elucidates that there exists a celestial body with all features of Pluto, but that it's not to be counted as a planet in the solar system. More light is shed on the 'Lawhul Mahfoodh' (Q85:22). The verse starting with 'Sibghathallah' (Q2: 138) has very profound meaning. It pertains to actual colouring in nature. With the emergence of this phase, colour will be defined absolutely and we will realise that colour is a Book of Nature in itself and that it must be obeyed. What each digit 1,2,3,.. denote is also being disclosed leading to inner definition of mathematics. Mathematics and colour are the laws of God to be realised and obeyed; every verse in Quran has an underflow of mathematics and colour beneath it. The basis of science is cause and effect. He says basic underlying principles exist behind formation of the universe, galaxies, stars, planets and other celestial objects. The existence of all the animals, birds, insects and plants on Earth are based on very

specific but hidden inner principles. Every species carries with it a sublime principle related to human mind in a subtle way. The introduction of new species and withdrawal of existing ones are based on laws linked to development of human mind. It's for this that some species necessary regularly are kept close to us as pets or domestic animals; rarely needed species are kept away in thick jungles, under deep oceans or up on top of mountain peaks. This is how we organise books; those needed routinely are arranged right on our study table, and those to be referred infrequently are kept away in public libraries."

Quran puts forth a challenge to produce a verse or chapter like it (Q2:23, Q10:38, Q11:13). Every concept and notion mentioned in Quran is understood to exist also as a creation in the universe that continually functions. As creation is impossible except for the Creator, it's impossible to add even a single word into the text of Quran. The true inner meanings of Quran unfolds with all its might and indisputable evidences. There's a specific reason why the 'Bismillah' has been removed from Ch 9 (Q9: Thowbah). There exists an exceedingly large number of occurrences in Quran where deeper inner meanings are seen. It's important to bring these profound facts out to the entire humankind at once. All these topics first appear in his mind; it's much later that he finds them interpreted in human body, in plants and animals, in the structure of cells and atoms, in the solar system, in the laws of nature, in light and darkness, in colour and mathematics, and finally in Quran. With the emergence of this new phase of knowledge, intellects from different walks of life will start pouring into Quran and will understand that it's the universal reality. Extremely significant new branches of science will be born. So far, science has been telling us 'how' things work. With the advent of this phase, it'll begin to explain 'why' they exist the way they do. Quran is the 'handbook' of nature. It's possible to 'read' Quran from nature and vice versa. Humankind is unaware of these extremely vital and fundamental facts. He hastens to add that he is an ordinary man who is being made instrumental. This is how knowledge of every kind descends on us. This is precisely how a scientist is born. A human mind is chosen based on its merit for the 'click' of a piece of novel wisdom.

While he doesn't know Arabic language except to read the script, his mind is being taught meanings of Quran through letters and sounds, and not through words. With this, it's possible to get answers to fundamental questions such as why Jesus came soon after Moses; why one more prophet (Muhammad) was needed after Jesus; and why wasn't Jesus given the last Scripture, the Quran? These questions are posed from the precise knowledge of their answers. His mind is taught about every prophet mentioned in Quran including their specific names. It's possible to understand with proof why the last prophet was named 'Muhammad' and why he was mentioned to Isa as 'Ahmad' (Q61:6). A team of scientists and experts from various areas of science and maths, including a few psychologists is necessary to comprehend the Revealing Wisdom and disseminate it to the entire world. As the Quran acts as the key to this great wisdom, a few experts well-versed in Arabic language and Quran with strong scientific background too are needed. Far more than a language, Arabic is a system taught as a language to reveal the final Book of God. Hence, every letter, word and usage in Quran contains deep secrets that'll be revealed only when God desires.

Abdul Khader spends his time in solitude, pondering over nature; he doesn't take anything for granted and goes with a free mind after any clue from nature however trivial it may appear. We've sent letters of great significance to several heads of nations (including President of US, PM of UK, President and PM of India); renowned research centres (NASA, IAU, NIMHANS and WWF); reputed universities (Oxford, Harvard and Johns Hopkins); a few outstanding scientists (Profs Roger Penrose, Stephen Hawking); important organisations (UN, IPCC, CTC, Transparency Intl); judiciary positions (President of Intl Court of Justice and Chief Justice of India); and numerous Arab/Islamic universities and centres. These letters discuss fundamental, most important matters related to humanity and give glad tidings about the imminent Revealing Wisdom. This'll lead to peace and harmony, universal values of equality and tolerance, human rights and dignity all over the world. We had sent an article to the reputed journal Nature too (copy enclosed). We urge you to interact with us at the earliest.

Yours sincerely, M Ameen (sgd)

090 Dr Manmohan Singh, Prm Min of India (6 Mar 2010)

Respected Sir, We write this to convey glad tidings of a most important Revealing Wisdom capable of bringing out fundamental changes to the desperate state of affairs prevailing over the world. We enclose copies of: (i) our letter to you sent on 18 Dec 2006, (ii) extract of our letters to Dr APJ Abdul Kalam, (iii) letter to UN (to Mr Kofi Annan and Dr Shashi Tharoor) sent on 28 Dec 2006, (iv) Letter to Chief Justice of India sent on 22 Jan 2007, (v) Letter to Chancellor, Oxford Univ sent on 7 Jan 2007, and (vi) an article sent to Nature. These letters and article discuss matters of utmost significance to science and humanity. We're also having telephonic interactions with a few western universities. As this Wisdom is emerging from our country, we have a greater responsibility to make it known to the entire world at the earliest. It discloses a completely new phase of science and spirituality, unites the two, and paves way to the unity of different religions and nations under one head "the human species". The evidences that accompany this knowledge are innumerable and undeniably powerful. We urge you to read the enclosed documents carefully as the matter is intricate, unfamiliar, and difficult to understand. A team of exceptionally competent intellects with clear logical thinking is needed to be formed to grasp this and convey to the entire humankind. Yours sincerely, M Ameen (sgd)

091 Secretary-General, United Nations (6 May 2010)

Dear Sir, This is an extraordinary letter that discusses matters of great relevance to United Nations and its Charter. It conveys glad tidings of a forthcoming new and most significant knowledge capable of bringing out widespread changes to the desperate state of affairs prevailing over the world now. A quick look around shows clearly that humankind is in utter darkness at present. Corruption and lawlessness are the order of the day. The Corruption Perception Index by Transparency Intl draws attention to the sorry state of affairs prevailing over most parts of the world. Fundamentalism, extremism, terrorism and ensuing violence are leading to loss of innocent lives and destruction of wealth. There must be a way to

restore justice and peace on Earth with right understanding of nature and principles behind its laws. The whole universe functions smoothly without conflicts. Nature around us including galaxies and planets, plants and animals, all move as per the universal rule. Humankind is the only trouble maker on Earth; there must be a way to rescue humanity and the planet. The Sec-General has rightly pointed out: a divided world needs 'a truly United Nations', and people are to be treated as individual human beings, not as abstractions or mere components of state. This wisdom coming with clear irrefutable evidences and provides the only means to practically achieve these essential noble goals. It helps us move towards a better organised and more peaceful world putting an end to violence and warfare. All priorities listed by the Sec-General such as climate change, disarmament, combating financial crisis and poverty, global health, peace and security, equal status to women and responsibility to protect humankind, will be met once this Wisdom spreads over the entire globe. It paves the way to fulfilment of the dignified goal of the organisation, the 'united nations', and people all over the world will soon realise the basic truth that we belong to the same single 'human species'. In this regard, we see a clear, important, urgent role UN has.

But this Wisdom isn't easy to understand. This was so when the earliest scientist tried to disclose truth of the round, moving Earth. It also highlights that human race with all its superior intellectual calibre could be kept in total darkness regarding fundamental facts such as this for a very long time: to live on a round, fast-spinning globe for thousands of years, yet to believe it's flat and static! This difficulty in comprehension happens with the exposure of any new discovery that shakes the foundations of old, strongly held beliefs. This happens now too. Wisdom of utmost significance to humankind is emerging. It marks the beginning of a new phase of science that encompasses all branches of knowledge including mathematics, science and technology, history and psychology, from a completely different perspective unknown so far. It describes at micro and macro levels why things exist the way they do. Principles behind mathematics, the presence of the 3 basic colours, hidden inner concepts behind plants and animals, insects and microbes, the

arrangement and trajectory of Sun and the planets, and concealed secrets behind stars and black holes, are all slowly getting exposed with complete evidence. This phase also discloses misconceptions introduced by religions and philosophies and unites humankind as one community. Just as it's impossible to think of a situation without the concept of zero, it becomes apparent that this newly exposed knowledge is absolutely essential to bring peace and harmony to the entire world. We're introduced to this overwhelming flow of wisdom by Abdul Khader, who resides in Calicut, Kerala. He met us nearly six years ago. Several faculty of neighbouring universities have listened to him for considerable amount of time by now. Matters he discusses are all in an unusually high plane. He says mathematics and colour are the languages through which nature teaches us. Every object, inanimate or living, is made up of the three basic ingredients: space, time and consciousness. The constituting matter, its operational component that makes it active or alive and an inner hidden principle related to its cause. Thus, we have our physical body, life and consciousness. These three constituents are represented by the three basic colours red, green and blue. Earth shows these colours in its soil, vegetation, and the sky. This threesome is also seen in the three states of matter (solid, liquid and gas), three species types—living under water, on land, and in air, and the three constituents of atom—neutron, proton and electron.

He says that the basis of science is cause and effect. A particle that demonstrates causality must be the result of a root cause. Basic underlying principles exist behind formation of the universe, its galaxies, stars, planets and other celestial objects. Existence of all the animals, birds, insects and plants on Earth are based on specific but hidden inner principles that we can understand with the exposure of this wisdom. Every species carries with it a sublime principle related to the functioning of human mind in a subtle way. The introduction of new species and withdrawal of existing ones too are based on laws linked to the development of human mind. With the exposure of these universal truths many significant new branches of science will emerge. So far, science has been telling us 'how' things function. With this it begins to describe 'why' they exist

the way they do. This matter is more difficult to understand than it was for the first scientist to convince his people that the Earth is round and in motion. Earth was flat and stationary only in the minds of people; the scientist had to make it round and moving, again only in the minds of his people. Unseen truth behind creation is much harder to perceive than the observable, tangible facts of the physical universe dealt by the present-day science. This phase of wisdom will expose concealed but extremely essential principles behind Onkaram' of the Hindus, the 'Star of David' of the Jews, the 'Ten Commandments' given to Moses, the distinctive birth of Jesus, the 'Eightfold Path' of the Buddha, the 'Quran' of the Muslims, and the 'Guru Granth Sahib' of the Sikhs. True inner meanings behind uncorrupted parts of all divine Scriptures will be explained. This will enable us to understand why different religions exist now. Soon all religions will join hands and will realise the ultimate reality that all of us are alike. We depend upon the same sunshine, breathe same air, drink same water and live on same Earth. Just as we don't find any religion anywhere among the entire plant and animal kingdom, there can't be any such division among human mind, the most intelligent creation. Human mind is about to be defined in true form.

People with high scientific and mathematical background may grasp this easier at first. Slowly it'll begin to reach everywhere. Just as it's unimaginable for us now to think of a flat, static Earth, it was equally unimaginable for the people of olden times to conceive the Earth as round and moving. A time is soon to come when humankind will find it astonishing to learn that there lived a generation who studied about physical sciences without relating them to their most important, invisible inner principles. A team of highly competent intellects with scientific background and clear rational thinking is essential to learn and convey the Revealing Wisdom. Although this knowledge is definitely evidence based, the proofs aren't easy to comprehend as they are subtle and difficult to grasp. It can only be grasped by listening to him continuously. The basic building blocks of this truly vast topic have to be mastered correctly before the advanced concepts and secrets behind nature and its formation can be appreciated. It takes time to understand

these basic units as each of them are completely new and elusive. This learning process calls for extraordinary concentration, patience and perseverance.

We're aware that we're writing this letter to one of the most responsible positions in the world. We hope this letter will be treated with due attention and dignity the matter deserves. This concerns the entire human race and has the solution to several grave issues facing humanity now. The whole world is passing through a most difficult situation: fast degradation of climatic conditions, depletion of potable water, spread of hatred, violence and unrest resulting in destruction of life and wealth, and technological advancements such as developments of nuclear research threatening the existence of Earth itself. This wisdom provides the only ray of hope. We urge you to ponder over facts mentioned here which contains only a small part of what he has communicated so far. He's been constantly demanding the presence of exceptionally competent experts from various areas of science, mathematics and psychology. Yours sincerely, M Ameen (sgd)

092 Sultan Qaboos B Said, Sultan of Oman (17 May 2010)

Respected Sultan, *We write this letter to convey glad tidings of a forthcoming Revealing Wisdom capable of bringing extensive changes to the sad state of affairs prevailing over the world now. More delightful is the fact that it's emerging from the Quran as a new phase that remained hidden during the last 1400 years. The Quran will soon be identified as the leading beacon of light for the entire humankind, a guiding light without which it's impossible to advance further in science or spirituality. This wisdom appears with great logical clarity and overwhelming evidence that it's impossible to deny it from any viewpoint. We also realise that Arabic will be elevated from one among several languages as we perceive today, to its unique status of a special system designed by God for disclosing the last Book, the Quran. We met Abdul Khader, residing in Calicut, nearly six years ago. From childhood days he's been used to thinking deeply and differently. Thoughts that appeared strange and disorganised first became coherent but intricate and serious soon. He began to realise that he's being made*

instrumental to an immensely significant Revealing Wisdom that'll transform the entire human race. Several faculty from neighbouring universities have listened to him for considerable amount of time. Matters he discusses are all in an unusually high plane. He talks about mathematics and colour as the language through which God teaches us. "Everything is made of 3 basic ingredients: space, time and consciousness. These 3 'invisible' constituents are denoted by 3 basic colours: red, green and blue. Earth shows these colours: a form of red in the soil, green in its vegetation and blue in the sky. This threesome is also seen in the 3 states of matter: solid, liquid and gas; 3 categories of species: living under water, on land, and in air; and 3 basic constituents of an atom: neutrons, protons and electrons. There's a specific reason why we were taught to write the digits 1, 2, 3, .. the way we write them. Strict but concealed mathematical principles govern the organisation of genes in human DNA too. There are several layers of deep undisclosed inner principles that exist throughout nature that we're yet to know.

"All sciences emanate from mathematics", he explains. "The maths we deal with regularly has a concealed soul or inner principle. We use only the material body of maths now. The golden ratio that exists in nature has a soul. The quantity π is a principle. Geometric shapes such as triangles, rectangles and circles in nature have profound inner meanings. Humankind was taught to draw stars by combining two equilateral triangles. Such a star appears as a noble symbol for the Jews, namely the 'Star of David'. The inner principles behind this will be defined with all its dignity. This is vital for the entire human race and not for the Jews alone, and it's as much scientific as it's spiritual. He points out that the humankind is in utter darkness now. Corruption and lawlessness are the order of the day. Terrorism, fundamentalism and discrimination based on religion or race are causing destruction of life and wealth. Heinous war crimes and genocides are becoming frequent. While we appear to have advanced much in science and technology, we're far from being civilised or cultured. From using stones and poisoned arrows as weapons for killing, we have 'advanced' and developed devastating armaments including weapons of mass destruction.

The money that countries earmark for defence is sufficient to wipe out poverty altogether from the Earth. We fail to accept ourselves as members of the same one species 'human' although each of us came here the same way: from a sperm and an egg, live on the same planet, absorb energy from the same Sun, breathe the same air and drink the same water. The present-day darkness is thus much more intense than what has ever been witnessed in the entire human history. Every peace-loving person looks for a way out of this extremely difficult situation. This Revealing Wisdom comes as the only ray of hope, and is emerging from Quran as a new phase. Humankind had to progress so much in science, technology and physical knowledge before this could be understood.

A few years ago, he accidentally found that his thoughts were getting connected to the Quran (from Malayalam translations as he doesn't understand Arabic language). He says that the Quran has numerous hidden layers of meanings; it's alive and functions on its own at predetermined times. Thus, it's opening up a new phase now. Every Arabic word in Quran is a formula. The presence of special letters at the beginning of several chapters (Hurooful Muqatta'at) points to this great but undisclosed fact. His mind is being taught the Arabic system and he's able to understand how each word in Arabic has been formed, why its grammar and 'thajweed' rules have been kept the way we know them, and why the Quran's writing is different from the usual Arabic writing. Much more than a language Arabic has been developed through ages to bring out the final Book of God, the Quran. God taught us the numeric values of letters (Abjad), which was initiated with Hebrew during the time of Moses, and completed in Arabic during Muhammad's time, showing a way to connect language and numbers". We see that many of the inner meanings of Quran are being exposed now with clear evidence. For example, interpretations with proof are given to Hurooful Muqatta'at. These letters act as the source code from which the Quran blossoms the way a flower blooms out of a bud. 'That is the Book', it states next to the first occurrence (Q2:2), implying that understanding them correctly is essential to the comprehension of the Book. The meaning of these letters remained a mystery until now. The Quran

talks about the appearance of more proofs after a period of time (Q38:88). It also says 'We shall show them Our portents on the horizons and within themselves until it'll be manifest unto them that it's the Truth' (Q41:53). The beginning of this phase of wisdom is stated unambiguously in several locations in the Book. The Quran is soon to become the Book of guidance for the entire humankind, a guidance without which humanity won't be able to advance any further. This guidance calls for extreme carefulness and precision (thaqwa) in everything that we do. He forewarns us to take utmost caution in talking about Quran without properly knowing it.

This letter is being written to you as per his instructions. He sees the Sultan as a ruler loved by his subjects, a simple and logically sound person who works for the benefit of his people. He suggests that the Sultan sends a team of at least three experts from different areas of science and technology, mathematics, Arabic and Quran, here to meet him and get to know the preliminary details regarding this utmost serious matter directly. We realise that this matter is so important that it calls for most urgent action. This is a great occasion in which God reveals a new phase of Quran. The Quran, is not for the Muslims alone; it's for the entire humankind and has the power to unite all existing religions and communities into one. We see strong evidences that we're being led to that beautiful reality of a single community as indicated in Quran (Q21:92, Q23:52). It states unambiguously "the Moon has split asunder" (Q54:1). The significance of what this verse implies is being explained with complete proof in agreement with scientific understanding and logical perception. He explains why Earth, the only inhabited planet in solar system, has just one moon while planets such as Jupiter and Saturn with no inhabitants have dozens. The markings on Moon as seen from the Earth are also being explained with evidence. The reason for the description of 'people of the cave' (Q18:9-22) will be explained in front of a team of researchers. Why several chapters of Quran bear names of animals and insects (Q2, Q16, Q27, Q29 and Q105) is also being made known. Why each plant and animal species is created in the specific way and what important lessons they teach us will be explained with evidence. The mention of nineteen guards for the hell (Q74:30) will be defined.

He points out that there are many instances in Quran where logic and reasoning seem to fail. It's mentioned in numerous places that God created Earth and the skies in six days (Q32:4). It also mentions that if He wishes to do anything, He only commands, "be", and it becomes (Q36:82). It's possible to explain this seeming contradiction with logical clarity. There are occurrences in Quran which defies common sense. Many mentions which have been incorrectly understood so far contain sublime and unexposed truths. It's possible to explain clearly the great signs given to Moses (Q20:17-23), the miracles of Castle of Solomon (Q27:44), the event of Jonah being swallowed by the fish (Q21:87) and many more narrations in Quran. Besides, the mention regarding the birth, death and 'resurrection' of Jesus (Q19:33) is being defined clearly. He says that the only thing God did violating the laws of nature was the creation of Jesus, son of Mary. If God destined that to happen, there must be a dignified and sublime reason. He says Jesus will be made an exceptionally vital sign not only to the Christians but also to the entire mankind (Q19:21). It was almost six years ago that he talked to us about the solar system. It's possible to explain with proof why the solar system exists the way it does. Why the Earth shows the marvellous blue colour when seen from outside and why Mercury and Venus exist before Earth? Why Venus and Uranus rotate retrograde? Why Venus is made of such a shining material that it's seen as the brightest object in the night sky? Why it appears before us either soon after sunset or just before sunrise at an angle convenient to watch? Why Jupiter is made so large and Saturn provided with a magnificent ring? Why Neptune appears blue in colour and Pluto's path intervenes with that of Neptune? He can elucidate answers to these questions with substantiation. He constantly reminds us that nothing in nature occurs without a noble and fundamental reason. He explained on several occasions there's a clear and comprehensible reason why the asteroids are left as asteroids and not combined into a planet in the fifth orbit. The rules for the first four terrestrial planets and the next four gaseous one are different. Pluto and any other celestial body we may spot in future follow a completely different set of rules. Those days when he talked to us about Pluto, we all believed it to be a planet. Later when

the IAU reclassified it as a dwarf planet, it confirms to his statements. He says that while the resolution demoting Pluto from its initial status of a planet is right, corrections are necessary in its other resolutions. The reason each planet in the solar system exists with its specific size, position, trajectory and speed can be explained with clear proofs from Quran. The Quran also elucidates: there's a celestial body with all features of Pluto, but it isn't a planet in the solar system. More light is being shed on the 'Lawhul Mahfoodh' (Q85:22).

The basis of science is cause and effect. He is being taught the causal basis behind the creation of the first particle, and subsequently behind formation of everything in the universe. He says: basic underlying principles exist behind formation of the universe, galaxies, stars, planets and other celestial objects. The existence of all the animals, birds, insects and plants on Earth are based on very specific but hidden inner principles that we can know with the exposure of this phase. Every species carries with it a sublime principle related to the human mind in a hidden, subtle way. The introduction of new species and the withdrawal of existing ones are likewise based on laws linked to the development of human mind. The verse starting with 'Sibghathallah' (Q2: 138) has extremely profound meaning and pertains to the actual colour in nature. With the emergence of this phase, colour will be defined absolutely; we'll realise that colour is a law of God to be obeyed. What each digit 1, 2, 3, .. represent is also being unveiled, leading to inner definition of mathematics. Mathematics and colour are the laws of God which must be obeyed. Every verse in Quran is underlaid with a layer of maths and a layer of colour. Quran puts forth a challenge to produce a verse or chapter like it (Q2:23, Q10:38, Q11:13). It's realised that every concept and notion in Quran must exist as a created thing in the universe that functions. This connection between the physical universe and Quran is being elucidated. As creation is impossible except for the Creator, it's impossible to add even a single word into the Quranic text. The true inner meaning of Quran unfolds with indisputable proofs. There's a specific reason why the 'Bismillah' has been removed from Ch:9 (Thowbah). There exist an exceedingly large number of occurrences

in Quran where deeper inner meanings are seen. It's very important to bring these crucial and profound truths to the entire humankind at the earliest. He constantly reminds us that 'guessing' of any type isn't permitted in interpreting Quran (Q10:36, Q53:28). These topics first appear in his mind; much later he finds them interpreted in human body, plant and animal species, in the structure of cells and atoms, in solar system, in laws of nature, in light and darkness, in colour and maths, and finally in Quran. With the emergence of this new phase of knowledge, intellects from different walks of life all over the world will start pouring into Quran and will identify that it's the universal reality. Extremely significant new branches of science will be born. So far, science tells us 'how' things work. With the advent of this phase, it begins to explain 'why' things exist the way they do. The Quran is the 'handbook' of nature. It's possible to 'read' Quran from nature and nature from Quran. Humankind is unaware of these most fundamental facts. He hastens to add that he's an ordinary man who is being made instrumental. This is how every knowledge descends on us: a human mind is made instrumental. This is how any scientist is born. A human mind gets chosen based on merit for the 'click' of a piece of novel wisdom.

Although he doesn't know Arabic language except to read, his mind is taught the meanings of words in Quran through letters and phonetics, not through words. Answers to fundamental questions arise in his mind with evidence: why Jesus came after Moses; why one more prophet (Muhammad) after Jesus; why Jesus wasn't given the last Scripture, the Quran? He's taught about every prophet mentioned in Quran and why those specific names including the last prophet 'Muhammad', and why he was mentioned to Isa as 'Ahmad' (Q61:6). A team of scientists and experts from various branches of science and technology, including a few psychologists is necessary to comprehend it and convey to the entire world. As the Quran acts as the key to open this great wisdom, it's necessary to have a team of experts who know Arabic and Quran well. Arabic is an encrypted system taught to human as a language to reveal the final Book of God and preserve it without corruption. Hence, every Quranic syllable and usage encloses deep secrets to be

disclosed as God desires.

Abdul Khader leads a simple life, has hardly any friends, and spends time in solitude, pondering over nature and its creations. We've sent letters of utmost significance to several heads of nations (including President of US, PM of UK, President and PM of India); renowned research centres (like NASA, IAU, NIMHANS and WWF); reputed universities (Oxford, Harvard, Johns Hopkins); outstanding scientists (Profs Roger Penrose, Stephen Hawking, Yash Pal); international organisations (UN, IPCC, CTC and Transparency International); and judiciary positions (President of Intl Court of Justice and Chief Justice of India); and numerous Arab/Islamic universities and centres. This demands highest levels of keenness and attentiveness. A team of exceptionally competent intellects with strong background in different areas of science, mathematics, psychology, and who are well-versed in Arabic language and understanding of Quran is needed to comprehend the Revealing Wisdom and convey it to humankind. Yours sincerely, M Ameen (sgd)

PS: *If felt essential, I am prepared to come to Oman for three days provided day-long discussions are arranged with at least three intellects with scientific background who know English well.*

093–101 Letters (25 May 2011)

Adam Rutherford, Nature Publishing Group	Andrew Hodges, Wadham College, Oxford Univ	Jim Al-Khalili, Physics, University of Surrey, UK
A Sella, Chemistry, Univ College London, UK	Robert May, Zoology, University of Oxford, UK	Ian Stewart, Mathematics, University Warwick
D Becker, Cellular Imaging, Univ Colleg London	D Mabberley, Univ Washington Botanic Gardns	Jeffrey Bada, Scripps Institute Oceanography

Dear Friends, (sent to all the above)

We happened to watch two media recordings of BBC Four: “The Secret Life of Chaos” and “The Cell”, in which a few of the renowned mathematicians and biologists of yesteryears were introduced and their important discoveries related to the origin of life presented

vividly. Some of the noteworthy statements made were: “Thousands of years of ignorance and superstitions have been swept away”; “There are really big questions that remain unanswered”; “What they’re about to discover will turn out to be more complex, more extraordinary and more powerful than they could possibly have imagined”; “He could see rules, where the rest of us see anarchy; he could see form and structure where the rest of us just see a shapeless mess; above all, he could see strange new kind of mathematics underpinning the whole of nature”; and “Why were the scientific community so uninterested or even hostile to this astonishing, beautiful idea?” It’s these statements that prompted us to write this important letter to each of you. A discovery that’s much more complex, extraordinary and powerful than anything the humankind has ever witnessed is emerging. It wipes out thousands of years of ignorance and superstitions. It is clear that we’ve been holding fast to numerous misconceptions without knowing them to be so, even thinking them to be facts or calling them ‘science’. Abdul Khader residing in Calicut, Kerala sees rules and perfect order behind everything in nature, from fern to giant galaxy super-clusters.

He’s able to explain with evidence why things exist the way they do. He says that an invisible form of mathematics underpins the whole of the universe and reveals the inner principles behind the evolution of cosmos and life on Earth. The matters he discusses are all in an unusually high plane. Nature talks to us through everything; mathematics and colour constitute an encrypted language system; his mind is taught the key to decipher it. He sees a world that is completely different from what others see in which everything makes perfect sense. This is like a person well-versed with hieroglyphics reading it effortlessly while it makes little sense to anyone else. He says that every object, inanimate or living, is made up of 3 basic ingredients: space, time and consciousness. Nature uses the 3 basic colours red, green and blue to represent these. Earth shows a form of red in the soil, green in its vegetation, and blue in the sky. This threesome is also seen in the 3 states of matter: solid, liquid and gas; the 3 categories of species: those living under water, on land, and in air; and the 3 main constituents

of an atom: neutron, proton and electron. Logically sound proofs for these exist but they are intricate, subtle and difficult to grasp. The basic building blocks have to be mastered before advanced concepts can be comprehended. It takes time to understand the basic blocks as each of them are completely new and elusive. This learning process calls for extraordinary concentration, patience and perseverance. He introduces an altogether different way of very keen observation and rational thinking which only will enable us to unearth hidden, unseen but fundamental notions such as the definition of time, energy, mass and force. This Revealing Wisdom comes with clear, irrefutable evidence and takes humankind to elevated levels of intellectual competence. It sheds light on the hidden mysteries behind the physical world that we perceive with our 5 senses and teaches us to use logic in the most exalted and precise form. So far, science has been telling us 'how' things work. With the advent of this new phase, it begins to describe 'why' they exist the way they do. It also exposes delusions introduced by religions and philosophies and unites humankind as one community, ushering in an epoch of peace and harmony. All discriminations and prejudices that obsessed us until now based on beliefs and religions, skin colour, nation, socioeconomic status and academic eminence will come to an end. Every persisting misery and difficulty we face now, including fast degradation of climatic conditions and deterioration of ethical and moral values and acts of terrorism has clear, practical solution once we attain this enlightened level of awareness. Besides, this wisdom provides us with a profound understanding of the functioning of human mind and consciousness.

Mathematics too is made up of the 3 components. The numbers constitute the physical part; from elementary arithmetic operators to all the complex developments in mathematics witnessed until now form the operational part. The 3rd constituent is the most significant inner principle which, although invisible, underlies the whole of nature. It's due to this reason that everything we perceive through our 5 senses has a mathematical order. The implications of different geometric forms including fractals seen in nature and the inherent simplicity and unpredictability of chaos and order are

explained from an entirely different perspective. The consciousness component underlies everything; this phase teaches us how to know and include this most essential part that eluded us all along. The basis of science is cause and effect. A particle that demonstrates causality must in itself be the result of a more fundamental cause. His mind is taught the primal reason behind the formation of the first particle, and subsequently behind planets, galaxies and the entire universe. The origin and evolution of different species of microbes, plants, insects, birds and animals on Earth are based on very specific but hidden inner principles. Every species carries with it a sublime concept related to the functioning of human mind in a subtle way. The introduction of new species and the withdrawal of existing ones are likewise linked to development of human mind. An ugly looking caterpillar eats away greenery hastily; after a pupa stage it transforms into a lovely butterfly and begins to assist nature's great reproduction process. It's possible to explain the amazing behaviour of different species with logical evidence.

He spends time in solitude pondering over nature and its creations. He doesn't take anything for granted and goes with a free mind after any clue from nature. A team of dedicated researchers with exceptional capability including biologists, psychologists and mathematicians is essential to understand him. This great wisdom concerning the Primal Truth isn't easy to comprehend first. It was so when the truth regarding micro-organisms was first described by Leeuwenhoek or the mathematical basis of formation of patterns on a cow was pointed out by Turing. No one could believe them. The scientists were relating the truth they discovered sincerely. But their fellow scientists refused to believe them due to the same sincerity. They truly thought Leeuwenhoek or Turing was talking nonsense! This sublime knowledge concerns topics that are far more complex as it describes invisible mysteries behind different fields of maths and science and takes humanity over a very big leap. Thus, it's more unbelievable than anything else science has ever encountered. It opens up thousands of new branches of science and enables us to begin exploring why things exist the way they do. We urge you to interact at once. We've sent letters of great significance to numerous heads of nations, renowned research centres, reputed universities,

outstanding scientists, important world organisations, and judiciary positions all over the world. We had sent letters to the BBC too. We try to reach out again now. On one hand we see the immense significance and extend of the matter he describes; but on the other, we realise the unfamiliarity and the colossal scale of incredibility this phase holds.

The questions he poses are far deeper than they first appear, and he poses them from the knowledge of their precise answers. After listening to him for a considerable amount of time, we realise that this is an exceptionally significant moment in history of science and human development. This Wisdom provides the only way to save the world from looming dangers of global warming, spread of hatred and violence, poverty despite abundant resources and unrest. He can elucidate clearly how and why each religion came into existence and why nature continues to maintain 'uncontacted tribes' even now. Every object, inanimate or living, carries an inner hidden principle that decides its appearance, behaviour, habitat and every quality. This applies from a micro-organism to a blue whale, and from a particle to a galaxy cluster. People with high scientific and mathematical background may grasp the Revealing Wisdom easier at first. Just as it's unimaginable to think of a flat immovable Earth now, it was equally unimaginable for the olden generation to conceive Earth as round and moving. A time is soon to come when humankind will find it astonishing to learn: once lived a generation who studied physical sciences without relating them to their most important unseen inner principles. Yours sincerely, M Ameen(sgd)

Dear Sir, (copy sent to all the above)

Enclosed with this letter is a most important unparalleled "Message" concerning science and humanity. It gives glad tidings of a forthcoming wisdom related to the primal truth that has been eagerly awaited from time immemorial. It sheds light on hidden mysteries behind everything of the physical world that we perceive with our five senses and appears with clear, irrefutable evidence. It takes us to elevated levels of intellectual competence and teaches us to use logic and intellection in the most exalted precise way. Every persisting misery and difficulty we face now including the fast degradation of climatic conditions and deterioration of ethical and moral values seen worldwide have clear, feasible solution once we attain this enlightened level of awareness. Mathematics and colour will be defined from fundamental causal bases of their origination. This wisdom provides a profound understanding of the functioning of human mind and consciousness. The Message is being sent to the List of Addresses that includes renowned universities, research centres, social organisations, heads of nations, supreme courts, reputed scientists, Nobel laureates and media all over the world. More than 2200 emails are being sent. As the matter is unfamiliar, intricate and elusive, the Message needs to be read repeatedly and with absolute attention. Yours sincerely, M Ameen (sgd)

120-124 Letters (27 Nov 2012)

E Green, Director, Natnl	C Bolden, Jr. Administratr, Natl Aerontcs	Rolf Heuer, Director-	D Ban Ki- moon, the Secretary-	Thorbjørn Jagland, Nobel Peace

--------------------------------	-----------	--------	-------------------------------	-------------------------------	----------------------

Dear Sir, (copy sent to all the above)

A unique “Message” of immense significance unparalleled in history is enclosed. It gives glad tidings of a forthcoming Revealing Wisdom related to the primal truth eagerly awaited from time immemorial. It provides priceless elucidations of natural phenomena including planets and satellites, mountains and oceans, species and evolution, human body and anatomy, human mind and consciousness from a perspective that remained completely hidden all along. The elucidations, scientific and logically-precise, testify to the necessity for a crucial shift in our thought process and approach to science. The shift, although intricate, proves to be absolutely essential just as the concept of round and moving Earth. Every branch of science including physics and chemistry, botany and zoology, geology and astronomy, mathematics and logic, philosophy and psychology will undergo radical change. The intellect will get fine-tuned, enhancing vision into realms that remained invisible until now. The enhanced vision will fetch insight and provide solution to various intriguing problems facing humanity now. Mathematics and colour will be defined for the first time starting from the fundamental cause behind their origination. Persisting miseries such as poverty and famine, financial crisis and imbalance, subjugation and extremism, accumulation of weapons and looming wars, and discriminations of every form will be resolved once and for all. The forthcoming wisdom is powerful, logically sensible, and heralds a great era of humanity. The Nobel Committee is being informed due to their closeness to a large number of reputed scientists. The utmost seriousness of the matter calls for quick action. We urge you to read the “Message” repeatedly and with absolute attention and do the needful to form a team of highly competent intellects to understand and convey the Revealing Wisdom. Yours sincerely, M Ameen (sgd)

125 Letter and Message sent to over 3300 addresses (4 Dec 2012)

Dear Sir, The unique “Ceenom: The Message” of immense significance unparalleled in history is enclosed herewith. It’s being sent to the List of Addresses that includes top-ranking universities, research centres, science academies, social/human rights organisations, renowned researchers and Nobel laureates, heads of nations and the UN. The List is grouped into: 0. Nations & UN (heads of nations, Secretary-General, UN), 1. Geosciences, 2. Biosciences, 3. Astrosciences, 4. Anthrosciences, 5. Sociosciences, 6. Psychosciences, 7. Academia (universities, science academies), 8. Academics (researchers, reformers), 9. Mass Media (science journals, media). Over 3300 emails and 1000 surface mails have been sent.

Ceenom: The Message gives glad tidings of a Revealing Wisdom related to the primal truth eagerly awaited from time immemorial. It provides priceless explanations of natural phenomena including planets and satellites, mountains and oceans, species and evolution, human body and anatomy, human mind and consciousness from a perspective that remained hidden until now. The scientific and logically precise elucidations testify to the necessity for a most important shift in thought process and approach towards science. The shift is most essential just as the concept of the round and moving Earth. The intellect will get fine-tuned, enhancing vision into realms that remained invisible until now. The enhanced vision will fetch insight and provide solution to various intriguing problems facing science and humanity. Mathematics and colour will be defined from the fundamental cause behind their origination. Persisting miseries such as poverty, famine, subjugation, extremism and discrimination of every form will be completely resolved. The forthcoming wisdom is powerful, logically sensible and heralds a great era of humanity. As the matter is intricate, the Message needs to be read repeatedly with absolute attention. It’s necessary to rise to the occasion, act with commitment and share the matter at once. You’re urged to interact at once to form a team of competent intellects to understand and transfer the great Revealing Wisdom. Yours sincerely, M Ameen (sgd)

126 Letter with hard copy of Message sent to over 1000 (27

Dec 2012)

Dear Sir, This is a unique message of immense significance, unparalleled in history. It gives glad tidings of a forthcoming revealed knowledge related to the Primal Truth eagerly awaited from time immemorial. It provides priceless elucidations of natural phenomena including planets and satellites, mountains and oceans, species and evolution, human body and anatomy, and human mind and consciousness from a perspective that remained obscure all along. The elucidations, scientific and logically-precise, testify to the necessity of a crucial shift in thought process and approach to science. The shift, while intricate, proves to be absolutely essential just as the concept of round, moving Earth. Branches of science like physics and chemistry, botany and zoology, geology and astronomy, mathematics and logic, philosophy and psychology will each undergo radical change. Palaeontology and history will be redefined with explanations about why certain species and generations came and later became extinct and why such information got preserved as fossils. The intellect will get fine-tuned enhancing vision into realms that remained invisible until now. The enhanced vision will fetch insight and provide solution to various intriguing problems facing science and humanity. Mathematics and colour will be defined for the first time starting from fundamental cause behind their origin. The reason for the beginning and evolution of various beliefs and philosophies will be known with clear logical evidence. Persisting miseries such as poverty and famine, financial crisis and imbalance, subjugation and extremism, accumulation of weapons and looming wars, and discriminations of every form will be completely eliminated. The Revealing Wisdom is powerful, logical and heralds a great era of humanity. Ceenom: The Message has been sent to the List of Addresses that includes top-ranking universities, research centres, science academies, social and human rights organisations, renowned scientists and Nobel laureates, heads of nations and UN, classed under: 0. Nations & UN (heads of nations, Sec-Genl, UN), 1. Geosciences, 2. Biosciences, 3. Astrosciences, 4. Anthrosciences, 5. Sociosciences, 6. Psychosciences, 7. Academia (universities, science academies), 8. Academics (researchers, reformers), 9. Mass Media (science journals, media),

and 10. Natives (institutions, individuals and media). Over 3600 emails have been sent; the matter has been publicised over several networks and blogs; hard copies were sent by surface mail to over 1000 selected centres and individuals. As the matter is subtle and elusive, the Message must be read repeatedly with absolute attention. It is necessary to rise to the occasion, act responsibly with commitment and communicate and share the matter at once. Human is about to know 'who and what for I am' and 'where from and where to I am' with logical proof. In order to comprehend and convey the most important Revealing Wisdom to humankind, it's essential to form a team of highly competent intellects with keen observation, unbiased and rational thinking and strong scientific outlook. This has become the reason for setting up the websites, preparing this message and this covering letter. Such a team needs to be set up at once; delay of each hour causes immense loss. I have prepared this message as I have been instructed to inform all deserving places by him whose mind is being instrumental to the great flow of the Revealing Wisdom. Yours sincerely, M Ameen (sgd)

Dr Chidambaram, Princpl Scientific Advisor PM, India	R	Professr K Vijay Raghavan, Minister of Sci & Tech, India	Prof Renee Borges, Centre Ecological Studies, IISc, India	Prof R Narasimha, Engnring Mechanics, JNCASR, India	Professr Pushpa Bhargava JN Inst Advnc Studies, India
---	---	---	--	--	---

Dear Sir, (sent to all the above)

The unique Ceenom: The Message of utmost significance is enclosed. Its purview includes everything from particles to cells, species, planets and galaxies. The cause-effect principle that paves the basis of science gets redefined starting from formation of the very first particle. The hard copy of Message has been sent to over 1000 addresses including top-ranking universities, research centres, social organisations, renowned researchers and reformers, heads of nations, and Secretary General of the United Nations. This is in addition to over 3300 emails sent earlier and the website ceenom.in in which an abstract of the Message is published. The

matter was discussed last week in person with Prof Rolf Heuer, Director General of CERN, Switzerland, who had visited Indian Institute of Science, Bangalore (IISc), and with several other scientists and researchers in and around IISc, including those from NIAS, the JNCASR, Raman Research Institute, NCBS, and IIM, Bangalore. Some of those who could realise the seriousness and importance of the matter include Prof B.V Sreekantan (former Director, TIFR Mumbai, now at NIAS), Prof N Balakrishnan (Associate Director, IISc), Prof Raghavendra Gadagkar (Ecological Sciences, IISc) and Prof Vijay Kumar Sharma (JNCASR). The Message is being sent to you as suggested by Prof N Balakrishnan (Dep. Director, IISc). As the matter is most important and elusive it's necessary to read the Message repeatedly with attention and care. We urge you to contact us at the earliest; we need to act together at once to bring this great phase of Revealing Wisdom emerging from our country. Yours sincerely, M Ameen (sgd)

132 Mr TKA Nair, PA to Prime Minister of India (27 Mar 2013)

Dear Sri Nair, We've been witnessing an unending flow of immensely significant wisdom from Abdul Khader during the past several years. Although we've progressed much in physical sciences and technology. But we have no scientific means to know the mysteries behind nature's design. The new emerging phase of Wisdom explains with logical evidence why different objects and species exist and function the way they do. Its realm includes particles and cells, species and planets, stars and galaxies, colour and light, water and air. It links everything starting from the Primordial Sound 'Om' through the teachings of the Buddha, all the Prophets and Scriptures, the scientists and reformers. It correlates with all philosophies including rationalism, communism, agnosticism and atheism. It discloses the complete human journey with details of history and of every transaction starting from the first human, without any discontinuity or omission of even remote tribal communities. In addition to exposing whether the theory of evolution is factually what we understand now or way beyond, it depicts the true inner characteristics and outer features of every

plant and animal species that exists now or has become extinct. The beginning of a truly sublime phase of wisdom of the unseen, preserved for humanity by nature to be bequeathed to generations is getting exposed now. This phase provides a clear understanding of human mind and consciousness; humankind is about to know who and what for we are.

This overwhelmingly significant wisdom can be grasped only by absolute dedication and concentration. After listening to him for long, we understand that it's much more difficult to comprehend this than any of the existing scientific knowledge as its purview lies outside the physical realm, the unseen truth lying beyond everything from a tiny particle to a mighty galaxy. It's exactly this that's been evading all great scientists including Einstein. Einstein was on the lookout for the origin of the first particle as he started his search for particle mass, $M=E/c^2$; but instead he ended up with $E = Mc^2$, the energy. The great experiment at CERN regarding the God's particle also concerns this. We understand that its solution is coming out with clear logical sequence starting from first principles of causality. A team of competent intellects with keen observation, rational thinking and diverse scientific background needs to be formed at once to disseminate the wisdom to its heirs, the humankind.

We would like to have a small team of intellects including you to come as soon as possible and listen to him for a whole day, and if possible, two or three consecutive days. At the end of continuous listening, we'll know that we've been listening to an unthinkably vast area of knowledge which has never appeared before us with such vivid details, proofs and explanations, and that the discussion has given us just a glimpse of the preface of the matter. We know how busy you are now; but we need to embark upon a journey where every present hectic activity on Earth gets belittled. It's necessary that each member of the team is dedicated, has deep inner concern regarding every human in the society, their pain and miseries, poverty and famine, and has concerns regarding every baby to be born. We understand that humanity has to march forward to a true, universal unity where boundaries between nations disappear forever. It's heartening to know that India, the

country with such great traditions and heritage, is made to take the lead in this most important regard. To identify the significance of the Message, it's necessary to study the list of addresses to which it's been sent. We've sent over 3300 emails and 1000 surface mails this year (2013) alone. Among most notable persons in our country who are informed are: the three Presidents Dr APJ Abdul Kalam, Smt Pratibha Patil and Shri Pranab Mukherjee; the 3 Chief Justices KG Balakrishnan, SH Kapadia and Altamas Kabir; Prime Minister Dr Manmohan Singh, Shri AK Antony and Ms Sonia Gandhi; researchers Dr K Kasturirangan, Dr MS Valiathan and Dr Thanu Padmanabhan. I had met you once in Calicut in March 2010 as instructed by Abdul Khader and had handed over a file to be passed on to the Prime Minister with copies of our letters to renowned positions. Last week, he instructed us to send copies of Message to every member of General Assembly of UN and its senior officers including all Under Sec-Generals. In brief, the urgent need for you is to: (i) pay a visit to Abdul Khader to understand the significance of the matter directly; (ii) pass the Message to other individuals of high competence and commitment; and (iii) discuss as to how best to make use of this for the benefit of the entire humanity. Yours sincerely, M Ameen (sgd)

133-168 Mr Ban Ki-moon, Sec-General, UN and others (27 Jul 2014)

Dear Sir, We bring to your urgent attention Ceenom: The Message, a message of immense significance. Abdul Khader who is instrumental for this Wisdom has instructed us to convey the Message to the Secretary-General at once in the wake of escalating unrest, violence and genocide in numerous parts of the world. The Message gives glad tidings of a Revealing Wisdom related to the primal truth eagerly awaited from first human and discloses profound elucidations of natural phenomena including galaxies and solar system, planets and moons, species and evolution, human mind and consciousness from a perspective that remained completely concealed all along. Although intricate, the elucidations are scientific, logically precise, and testify to the necessity for a decisive shift in thought process and approach to science. This shift

is absolutely essential just as the shift of Earth in human mind from 'flat and fixed' to the 'round and moving'. Every branch of science will undergo profound change. The intellect will get fine-tuned, enhancing vision into realms that remained hidden so far. This insight will reveal solutions to intriguing problems facing science and humanity. Space, time, consciousness will be mathematically defined starting from the basic cause behind their origination. Persisting miseries such as poverty and famine, economic crisis and imbalance, subjugation and extremism, accumulation of weapons and looming wars, and discriminations of every kind will be resolved completely. The imminent wisdom is powerful, logically sensible, unites human minds, and establishes the birth-intended eternal human abode.

As this foremost, sublime knowledge will eliminate discrimination, inequality and destruction at the origin from human minds, will lead humanity to virtue, peace and creativity, and will provide protection to women, children and the weak, it must be conveyed to the society at once. The utmost seriousness of the matter demands quick action. We're also advised to entrust the Sec-General to do the needful to form a team of exceptionally competent scientists and researchers with strong scientific background and clear logical thinking to grasp the Revealing Wisdom and transfer it to the humankind. The Message will soon be sent to the List of Informed that includes all supreme courts, heads of nations, reputed universities and research centres, national science academies, social and human right organisations, Nobel laureates, renowned scientists, scientific journals and media.

Yours sincerely, M Ameen (sgd) (Copy sent to the following)

169 Dr Andrei Linde, Physics, Stanford Univ (5 Aug 2014)

Dear Dr Linde, We, many faculty, mathematicians and scientists from a few neighbouring universities have been listening to Abdul Khader who is instrumental for a Revealing Wisdom of fundamental significance to science and humanity for the past ten

years. He happened to listen to your “Talk to Al-Jazeera (The Beginning of Time)” and instructed us to write this letter. He asked us to convey: “All principles and thought-patterns that have evolved from the earliest of time to this day were the necessary steps in the journey to the truth of the human mind; the seeming faults were in fact not faults. As thinking forward was fundamental in those steps, instead of calling them mistakes it’s right to say we’re now able to think closer to the truth and with evidence. We need to analyse these emerging lines together as we continue to understand with unmistakable proofs and definitions the First Cause behind when, how and why the universe originated and continues to function ceaselessly. The First Cause must be one; it must not be the effect of another. Can human mind visualise a cause that isn’t the effect of another cause? Did this ability remain hidden as the necessity never arose so far? As causality is the basis of the universe, a cause-effect chain that hasn’t begun as the effect of another cause only will be able to keep the universe eternally functional and active. What continues in the universe from the effect of the First Cause to the farthest end, what’s incomparably more profound than the unthinkable infinite flow of energy in every particle and galaxy, that without a beginning or an end, alive, eternally existent, not fully amenable to human thinking, but being the most sublime of all creations in universe that can recognise the final truth lying in the unseen with the support of logical evidences, with unique intellect given specifically to him, the basis of existence of every particle and its energy beats, every cell and every species and its intended destination, must be that distinctive First Cause.”

This is recognised as the unfolding of the mystery behind the beginning of the universe with logical clarity and proof. In this context and as unrest and violence in different parts of the world escalate, a letter was sent last week to the Sec-General of United Nations and other selected important addresses (copy of letter enclosed). The letter refers to [Ceenom: The Message](#). We urge you to go through the letter and the Message. As the matter comes in front of human cognition for the first time, it appears intricate. While at the Department of Biomedical Engineering of Johns Hopkins University during 1998-2000, I had the opportunity to work with

the Russian Professor Aleksander S. Popel. I am sending a copy of this mail to him and one to Mr Vladimir Putin, the President. Yours sincerely, M Ameen (sgd)

170–207 Anthropocene Working Group, Intl Commission on Stratigraphy (19 Oct 2014)

Dear Sir, (Copy to Secretary and members listed below)

We witness Revealing Wisdom of utmost significance relating science and humanity exposing mysteries behind everything from a tiny particle to a mighty galaxy. It's a most serious, profound phase that discloses with logical evidence the causal basis of why humans stand distinct with intellect from the rest of the species, why the Earth exists with its myriad species including us in its nature and ecology and is kept in the solar system with its lively habitat at the position, orbit and distance from the Sun, and why humankind is included in this earthly environment. It defines every branch of science at its foundation, provides proofs, prescribes guidance to be followed and establishes a comprehensive educational system founded on fundamental principles. More than 1000 surface and e-mails are being sent to a carefully selected List of Informed addresses including all Heads of Nations, Judiciary, UN, renowned universities, research centres, social and human rights organisations, reputed researchers and scientists including Nobel laureates, science journals and media. We urge you to visit ceenom.in and read with attention Ceenom: The Mandate, an abstract. It's become the most obligatory responsibility of every intellect to grasp the Message and convey it widely. As the Earth is realised to be currently in 'Anthropocene' state and human activity plays a decisive role in the future of Earth system, we're sending this mail to every member of the 'Anthropocene Working Group'. Yours sincerely, M Ameen (sgd)

208–237 Letters (27 Oct 2014)

Dear Sir, (Copy sent to all listed below)

We bring to your most urgent attention “Ceenom: The Message”, of immense significance. We’ve been instructed by Abdul Khader instrumental for this to convey the Message to top-ranking world universities at once and hence this letter. It gives glad tidings of a forthcoming Revealing Wisdom related to the primal truth eagerly awaited from time immemorial. It provides priceless elucidations of natural phenomena including galaxies and solar system, planets and moons, species and evolution, human mind and consciousness from a perspective that remained hidden all along. The scientific and logically precise elucidations testify to the need for a decisive shift in our thought process and approach to science. The shift, while intricate, is absolutely essential just as the concept of round moving Earth. Branches of science will undergo radical change. Space, time, consciousness will be mathematically defined starting from fundamental cause behind their origination with causality of the first particle. Persisting miseries such as poverty, famine, financial crisis, imbalance, subjugation, extremism, accumulation of weapons, looming wars, sexual exploitations and discriminations of every kind will be resolved completely. The wisdom is powerful, logically sensible and heralds a great era of humanity. As this foremost, profound Wisdom remained undisclosed so far and must be conveyed to the society at once, over 1000 copies of Message were sent by surface mail a year ago to responsible positions in the world.

Once complete, we’ve been instructed to send copies of the Message by surface mail to the entire List Informed that includes the supreme courts of countries and heads of nations, a representative list of universities, Nobel laureates, scientists, journals and media. The fundamental laws governing space, time, consciousness, the resulting beats of the entire physical universe due to the coordinated functioning of these three, and the human species, the sublime creation in it, brought before the mind’s inner vision with flawless evidences and mathematical support is revealed in the Message as “Essential Signs”. These expose the gender- and deed-specific definitions of human face, our identity. It elevates femininity to its purity prescribed in creation, Earth to its protected state of virginity, man to the highest dignified principles

he bears, our offspring, the essential component of the onward journey to grow up comprehending the true greatness of human species, and parents to a completely protected state. It uplifts human thinking from fundamental principles governing the first particle to unprecedented heights of inner perceptions based on causality, describing hidden laws inscribed in particles and cells, human chromosomes and genes, and concealed explanations they carry. Besides forming a monolithic society, it protects us from vice, pushes with tremendous force towards virtue and takes us to the supreme goal intended by human creation. The matter exists in realms much above any that humankind has ever encountered; this demands quick response and action. We urge you to read the Message with absolute attention and share it among researchers of your university. Yours sincerely, M Ameen (sgd)

**238 Mr Justice P. Sathasivam, Governor of Kerala, India
(27 Oct 2014)**

Respected Sir, Enclosed with this is a message of utmost significance, “Ceenom: The Message”, and a copy of our letter to a selected representative list of top-ranking universities, UN, NASA, ESA and the media. The Message gives glad tidings of a forthcoming Revealing Wisdom related to the Primal Truth eagerly awaited from time immemorial. As the Chancellor of universities in the state of Kerala, we’ve been instructed by Abdul Khader who is instrumental for the Revealing Wisdom to inform you about this and hence this letter. It’s a matter of great joy to Indians and Keralites that such an immensely important, all-pervading knowledge emerges from our state. To enter its extensive areas, a team of dedicated, highly competent intellects needs to be formed at once. Over 1000 surface and e-mails are being sent to a selected List of Informed including all Heads of Nations, Judiciary, UN, high-ranking universities, research centres, social and human rights organisations, renowned researchers, Nobel laureates, science journals and media. The websites “ceenom.in” and a few science/social networks are used to publicise this. A communication of such significance, consequence and urgency has never been sent in history nor sent to such a wide list of reputed centres and individuals over the world. A study of the List shows the gravity and profundity of the matter. This most important Message is arranged into several highly condensed, infinitely profound chapters; it’s intended for most serious reading. This phase of knowledge exposes the concealed but extremely important

principles behind 'Onkaram' of the Hindus, the 'Star of David' of the Jews, the 'Ten Commandments' given to Moses, the unique conception and birth of Jesus, the 'Eight-fold Path' of the Buddha, the 'Quran' of the Muslims, and the 'Guru Granth Sahib' of the Sikhs. In addition, the true inner meanings behind the uncorrupted parts of all divine Scriptures will be explained. Soon all religions will come together; humankind will realise the ultimate reality that we're all alike. We depend on the same sunshine, breathe the same air, drink the same water and live on the same planet Earth. Just as we don't find any religion or caste among the entire plant and animal species or even among our physical bodies, there can't be any such division among human mind, the unique distinctive creation. Human mind and consciousness are about to be defined in their true forms. The most efficient and profound way to enforce law in the world is to establish it in each individual self. After listening to him for years we realise that this wisdom provides the only way to achieve this sublime goal that will unite the entire human race into one community. Space, time, consciousness represented by the 3 colours red, green and blue, will be mathematically defined starting from the fundamental cause behind their origination with causality of the first particle. Persisting miseries: poverty and famine, financial crisis and imbalance, subjugation and extremism, accumulation of weapons and looming wars, sexual exploitations and discriminations of every kind will be resolved altogether. We urge you to ponder over facts mentioned in the Message. The wisdom is powerful, logically sensible, and heralds a great era of humanity. Let's interact with hope at ceen@ceenom.in. Yours sincerely, M Ameen (sgd)

239–240 Letters (21 Dec 2016)

*The Mandate sent to all 1500 in Lists (Home + Informed, inside Bk Cvr): All Supreme Courts, Heads of Nations, UN (400); Research Centres, Universities, Science Academies (300); Social/Human-Rights Organisations, Heads Religions (100); Scientists, Nobel Laureates, Scientific Journals, Media (200); total (1000)+ 500 Home List. These two lists are available in [cManifest.pdf](#). **Abdul Khader***

241 Letters (13 Jan 2017)

The Manifest is sent to the 'Condensed List' (given in next page) for continued interactions. The Preamble directs human mind to an immensely significant matter. As the Message includes profound fundamental facts of utmost importance to humanity, it demands the most responsible attention. Nature, its phenomena and all species, Earth and Moon, Sun and planetary system, interactions of mathematics and golden section, geometry and trigonometry, the organisation of atoms and cells, human chromosomes and hidden genomic laws, the origination of space-time-soul, evolving to the 3 basic colours, then to 9 phases of mathematics and zero define this with causal evidences, confirming foundations of true messages given to prophets for forward journey beyond depths of scientific knowledge and primal principles that has reached us so far. As we can know the causal basis of the origin of the universe through revelation of Divine System, the Solar Scripture, we'll begin to recognise 'our' true position as we realise the true reason 'why' the universe was established.

Preamble: The Solar System, the intended human abode, is a Divine Scripture decided at the origination and the Preamble to the Universe. Being humans, the unique species capable of analysing the unseen and its causal relations, we must hasten to learn about ourselves, species around us, nature and its phenomena, the vast knowledge discovered by untiring scientists, and divine wisdom brought by prophets and visionaries. We must explore the origin of the solar system including our abode the Earth, and comprehend this Preamble of the infinite universe. We're on the cusp of a profound disclosure satisfying the extreme intellect, befitting the loftiness of the sublimest creation in the universe, human, about to disclose myriad universal truths of essential unresolved mysteries. Exceptionally competent intellects need to be teamed up to enter the realms of this Revealing Wisdom.

Precaution: Scriptures confirming one another came to different human societies for tens of thousands of years revealing virtue and truth based on peace and love, aiming deeds and salvation. None came for benefiting an individual or a group. The most radical scientific discoveries like the spherical Earth orbiting the Sun or the

microbial world weren't made for profit either. Prophets led humanity with scriptures to one God, never for personal gains. Each was destined thus. Matters described in these letters or Ceenom: The Message, a brief of the forthcoming immensely profound fundamental truths, too is not for any gain. That the humankind is enjoined to remain united as one community is inscribed on Earth, in its nature and phenomena, in every planet and the ordering of solar system, in every species and our body, in atoms, electrons and nuclei, in cells, chromosomes and genes. This is seen inscribed in the first particle itself in 'mathematics' formed by denoting space-time-consciousness trio by the three basic colours, applying the trinity upon itself, the resulting nine commands becoming the nine rules for human, with the destination 'zero' denoting salvation. We, born as human, own the exceptional phenomenon the human mind that is moulded to obey this most perfect, indispensable commandment that travelled along causal route from the first particle to us. As the possessor of this sublimest, unique human mind, if you the reader, can see in mind a non-discriminating, unified, equal and complementing human society and an Earth filled with peace and truth, you may need to join this at once.

242–262 Letters (09 Mar 2017)

(This Letter about the solar system and the ‘Mandate’ sent to reputed space centres listed below)

A message with glad tidings of a forthcoming new phase of wisdom of utmost significance, [Ceenom: The Message \(ceenom.in\)](http://ceenom.in), was recently sent to over **1500** selected positions in the world. Before entering this definitive stage of true perception, humankind needs to comprehend the fundamental laws and regulations on which the entire solar system is founded. Most important principles related to

the solar system and its organisation of planets and moons are indicated in several chapters in the Message. These facts with evidence are likely to be rejected first by the mind just as Galileo or Leeuwenhoek were disbelieved at their times. It may be possible for intellects with deeper understanding about nature and its functioning to grasp realities quickly. As we begin to understand our destined abode the solar system from its fundamental constituting laws, the most inexplicable reason why the universe originated and evolved to its present form begins to disclose with evidence. As we're able to reach to the very beginning, to the very first particle, we begin to recognise the mathematical system that activated it and sustains and controls every particle in the universe, the present organisation of solar system, the colour that's made part of each particle, and the underlying fundamental phenomena of space-time-consciousness trio. Being human, the possessor of supreme infinite intellect that remains undisclosed so far, we stand before a phase as we recognise the founding **consciocentric law** and begin to know the order in the absolute unseen state before the first pulse before the first particle and the First Cause for that first effect. As part of fulfilling the duty I'm commanded to, I write this to inform the selected few scientists who work in this area with dedication at renowned centres. We need to hasten to recognise ourselves among the true fulfilled human society as intended by creation with unity, equality, nobility, order, ultimate ability and swift route to infinite wisdom. **Abdul Khader**

333–362 Letters (12 Sep 2018)

(This Letter sent to the list below of reputed universities, research centres and Secretary-General of UN)

Such a phase has never happened before; happens just once. Wisdom of supreme significance relating science and humanity is getting revealed exposing the causal basis behind everything. Confirming all phases of knowledge from first human brought by prophets, reformers, visionaries, scientists and thinkers, it discloses with logical evidence why human stands distinct with intellect from the rest of the species, why the Earth exists with its myriad species,

nature and ecology, is kept in the solar system with its lively environment, and why the humankind is included in this habitat. It also provides rational answers to fundamental questions such as: Why did the universe originate? What is the intended 'position' of human in this infinite universe, and 'where' do we factually stand now? Before entering this decisive phase of true insight and awareness, humankind needs to realise the fundamental laws and principles on which the entire universe including our abode the solar system is founded. Most important underlying rules related to the solar system, its arrangement of planets and the causal basis of origin of mathematics are recognised. These guide us logically to the origination of the universe and to the unique keeper of the unequalled infinite intellect, the humankind. As this Message includes profound fundamental facts of greatest importance to humanity, it demands most responsible attention. Nature, its phenomena and species, the Earth and the Moon, the Sun and the planetary system, the own form of golden section and its interaction with mathematics, the basic laws of evolution of geometry and trigonometry, nature's determined ordering of atoms and cells, human chromosomes and the hidden genomic laws, the origin of space-time-consciousness evolving to three basic colours and to the nine phases of mathematics and zero define this with clear causal proofs. As we begin to learn the causal basis of the universe we begin to know 'our' true position and significance.

These facts with proof are likely to be rejected by the mind at first just as Galileo or Leeuwenhoek were disbelieved at their times. It may be possible for intellects with deeper understanding about nature and its functioning to grasp these indispensable realities. We stand before a phase as we recognise the fundamental 'consciocentric' law and begin to know the order in the absolute unseen state before the appearance of the first particle and the First Cause for that first effect. As part of fulfilling the duty I am commanded to, I write this to inform a selected few who work in fundamental areas of mathematics, science, astronomy and biology with great enthusiasm and dedication. We must hasten to recognise ourselves among the true fulfilled human society as intended by creation with unity, equality, nobility, ultimate ability and swift

route to infinite wisdom before the first pulse before the first particle. Scriptures confirming one another came to different human societies for tens of thousands of years revealing virtue and truth, based on peace and love, aiming deeds and salvation. None came for benefiting an individual or a group. The most radical scientific discoveries like the spherical Earth orbiting the Sun or the microbial world weren't made for profit either. Prophets led humanity with scriptures to one God, never for personal gains. Each was destined thus. Matters described in these letters or 'Ceenom: The Mandate' (an abstract, available at ceenom.in), an abstract of the forthcoming immensely profound fundamental truths too is not for profit. That the humankind is enjoined to remain united as one community is inscribed on Earth, in its nature and occurrences, in every planet and the ordering of solar system, in every species and our body, in atoms, electrons and nuclei, in cells, chromosomes and genes. We, born as human, possess the unique phenomenon 'the human mind' that caused the evolution of the universe to its present form, and are moulded to obey this most perfect, indispensable commandment that travelled along causal route from first particle to us. Just as life and body are essential for a soul's presence, this evidence-based Wisdom is essential for human to know about the basis of this 'mathematical universe'. As the owner of this sublime unique human mind if you the reader can see in mind a unified, equal, non-discriminating and complementing human society and an Earth filled with peace, serenity and truth, you must join this at once. This is difficult to comprehend at first as it pertains to factual matters existing in the unseen realm beyond the physical world, though clear logical evidences exist in nature and solar system and in species including us the humans. It necessitates the learning of a complex language that helps us to decipher the encrypted codes of nature. We'll then realise the fundamental reason behind the existence of such a wide variety of species and why each exists with those specific features and behaviours. This phase begins with the true definition of 'mathematics' and clear understanding of when and why it emerged and 'what mathematics is', and thus elucidates the origination of the first particle with colour, and whether colour is meant to

characterise matter or matter meant to depict colour. We'll know that the three basic colours red, green and blue denote fundamental facts of space, time and consciousness; these three are represented on Earth by the soil, foliage and sky. Is it possible to read clear causal-based fundamental proofs of how the universe evolved from its nearest cross-section, our abode the solar system? If so, what must be the methodology? We need to enter into evidences spread on Earth, Moon, in the entirety of the solar system, the nature given to each planet and the asteroid, and orbital arrangement of planets from Mercury to Neptune. Pluto cannot be a planet due to a serious reason (our letter to IAU, 04 Sep 2006). It is difficult to describe such intricate matters in a limited letter like this. We've left the 'geocentric' and 'heliocentric' phases in the past; as we enter the 'consciocentric' phase from the present 'biocentric' one, we'll begin to learn the 'elementary' lessons of this phase. Right now our planet is passing through an extremely difficult situation: fast degradation of climate indicated by global warming, depletion of potable water, spread of hatred and violence resulting in destruction of life and wealth. It's essential to act quickly to prevent Earth from ruination and to restore it to its prescribed pristine state. This wisdom provides the only enduring way. To enter the extensive areas of the imminent phase, a comprehensive endeavour needs to be initiated at once. A high-level team of responsible, dedicated, competent intellects with strong scientific background and logical thinking is needed to comprehend matters directly, subject them to observations and evidences, and fulfil the obligation to convey to humankind. Messages with glad tidings of the forthcoming phase of wisdom were sent to thousands of reputed positions including all the heads of nations and judiciary, UN bodies, acclaimed universities and research centres, social organisations and religious heads, eminent scientists, journals and media during the last several years. This Message is part of this effort. Renowned universities and research centres involved in fundamental research with ample facilities are urged to interact quickly. **Abdul Khader**

Dear Sir, (Copy sent to all the above)

Wisdom of utmost significance confirming all phases of knowledge from first human until now is getting revealed exposing the causal basis behind everything. Redefining the foundations of mathematics and chemical elements, it encompasses particles and cells, DNA and chromosomes, water and air, plant and animal species, Earth and planets, Moon and asteroids, solar system and Milky Way, galaxy clusters, black holes and beyond, and defines seven colours from the basic three in a prism. From physical and operational characteristics of objects and species we can begin to decode the primal reasons of why each exists and functions with its specific features and behaviours. Just as we interpreted the great book of human genes, we can know the causal reasons behind the

occurrence of natural phenomena and evolution of species with precise clear proofs. The first particle can't be the cause and the entire universe its effect is evident. As mathematics forms the causal foundation of particles and the whole universe, it must exist before them. If mathematics that enables us to perceive the causality of the entire universe didn't have a causal reason for its own formation, it won't exist. And without it, there's no universe! The very existence of the universe is thus a proof that mathematics has a fundamental causal basis for its origination. In this causal based universe, nothing can exist with broken causal links is the fundamental law. The constant motion of infinite galaxy clusters at unthinkable speeds evidences the strictness of this law. Each particle and cell continues to exist and undergoes changes based on this law. The solar system and its planets, the Earth, its plant and animal species, I and you exist within these causal laws. All knowledge human acquired so far, material knowledge scientists gathered with intense experimentations, and basic facts regarding the unseen brought to us by prophets are all based on this law. We must learn about the Causality of causality with no speculation, based strictly on proofs, and quickly undertake the journey towards the noble abode destined by nature to human, the sublimest creation in the universe. If human is the most distinguished creation in the universe is a fact, mathematics is the essence of commandments to the one unified humankind on Earth. It's thus our obligation to identify its causal foundation and origin. Being unparalleled with the unique ability to think about the unseen and recognise its intricate causal relations, we must hasten to learn about ourselves, species around us, nature and its phenomena, wide collection of scientific knowledge discovered by countless scientists and divine wisdom brought to us by prophets and visionaries. We're about to realise: the intended human abode the Solar Scripture itself is a Divine System determined at the beginning of creation and the Preamble to the Universe. We must study about the origination of the solar system that guides us to the birth-intended destination and begin to comprehend this Preamble. We're at the verge of a profound disclosure of universal truths on a great variety of essential unresolved mysteries satisfying the extreme intellect and

befitting the loftiness of human. Human, provided with ultimate intellect and ability to think about the true laws of the unseen, is the cause for the creation of the universe. A form that denotes human must denote his consciousness, the common human face, and must include the golden ratio and geometry. The moment we recognise the own forms of the golden ratio, geometry and symbol for human race are all one marks the journey to a phase of greatest profundity. The Revealing Wisdom unveils a most significant fact that a unique Scripture testified by the structure of atoms, the DNA of cells, the numeric keypad [123; 456; 789], the fundamental space-time-consciousness trio, the three basic colours red-green-blue that represent it in nature, the solar system and myriad universal phenomena existed amidst us for centuries in encrypted formula form despite being believed as a language text. When decrypted, it exposes mysteries behind the universe, the human mind and consciousness. To enter the extensive areas of the exalted phase destined for human, a comprehensive endeavour needs to be initiated at once. Highly competent intellects with clear logical thinking and deep understanding of scientific and philosophical matters, dedicated, curious, capable of dealing with mathematics, psychology, physical and biological sciences, the origin of universe and theology need to be teamed up to enter the realms of the Revealing Wisdom. Universities like Oxford, Harvard, Cambridge and MIT, research centres such as NASA, ESA, CERN and LIGO, science academies, reputed scientists and Nobel laureates, heads of nations, UN bodies and judiciary, leaders of religions including Hinduism, Judaism, Christianity and Islam, scientific journals and media need to act together in this most important moment. Just as air and water are one, beliefs regarding fundamental principles of creation must be one for all. Besides eliminating variances in beliefs, the wisdom unites humankind into one community, instils fraternity and creativity, provides infinite peace and tranquillity and guides with excessive speed to noblest positions in science and understanding befitting the intellectually-tuned human. The Message, a brief preface, has been sent to over 3000 reputed positions (Informed). Envisaged for this, the website "ceenom.in" includes [Ceenom: The Mandate](#) (an abstract of the Message) and

[Ceenom: The Manifest](#) (an essence of communications). This is an updated copy of the Message. It's profound and intricate, is intended to be read with an unprejudiced mind, with absolute attention, and can be comprehended with repeated reading. This takes us to the causal basis of human, the cause of creation of the universe. Just as life and body are essential for a soul's presence here, this evidence-based Wisdom is absolutely necessary for human to know about the basis of the mathematical universe. We read about us, about why we're here on this blue planet with one moon at the third orbit in the solar abode, and what our intended destination is. Answer to this fundamental intellectual enquiry that began with the first human is getting disclosed logically and with evidence. Every one of us has an important responsibility to understand and disseminate this most significant phase of emerging wisdom. **Abdul Khader**

392 Dear Justice Katju and Lakhnavi, (31 May 2019)

Dear Justice Katju and Lakhnavi,

Happened to visit the website of the Indian Reunification Association and its basic concepts: (1) As the majority of Indians are immigrants who lived in harmony until the partition tore our country into three, these must be reunified into a single secular India; and (2) Dividing a country based on religion or caste is improper. I write this to convey glad tidings of a unique, immensely significant wisdom relating science and humanity introduced by Abdul Khader living in Calicut, Kerala. His nature and thinking are distinct. Everything in the universe is made of the three fundamental constituents: matter, motion, motive. Scientific advancements have helped us to identify only the first two, the matter (space) and motion (energy or time). We're yet to learn about the invisible but most important motive (consciousness) part related to why each object or species exists with its features and behaviours. This discloses a new phase of scientific wisdom revealing the inner principles behind the origin and evolution of the universe. Nature uses colour to represent these three. The basic colours numbering three, with the red of the soil representing space, green of the foliage denoting time, and blue of the sky (and oceans)

denoting consciousness, are due to this. This threesome occurs in the three states of matter (solid, liquid, gas), species (living under water, on land and in air), constituents of an atom (neutron, proton, electron), and in countless others. As we recognise the 'motive' part, we begin to identify the hidden causal reasons behind: the unique and peculiar trajectories of the Sun and the planets, the characteristics of each chemical element in the periodic table, and the existence of myriad species varieties and us—the most distinctive human with the most distinctive intellect. Thus, from the familiar physical and operational knowledge of objects and species, we must begin to identify the unfamiliar zones of why each object and species exists with its particular set of features and conducts. We'll then know the most essential principles behind the Primordial Sound 'Om', the Buddha and the 'Eightfold Path', Moses and the 'Ten Commandments', the 'Star of David', the distinguished birth of Jesus and the 'Quran'. The Quran is a Book of formulae in Arabic formula system, and not in Arabic language as thought until now. Special letters occurring at the beginning of several chapters in Quran testify this. The true meaning of Quran gets disclosed as the formulae get decrypted. Inner meanings of uncorrupted parts of all divine Scriptures will be explained enabling us to know why different religions exist now. We'll soon know the ultimate reality that all of us are alike; we came here the same way, breathe the same air, drink the same water and live on the same planet. Humankind remains divided under numerous belief systems as we continue to speculate without relying on true causal relations. The humankind is just at its toddler age now, unable to think based on causality and evidences. If the prophets of different times are brought in front of us now, they'll indeed not be in disagreement among themselves.

A few years prior to the reclassification of Pluto as a dwarf planet by the International Astronomical Union, he talked to many of us about the solar system. "There's a clear reason why the asteroids aren't combined to form a planet in the 5th orbit; the first four terrestrial planets and the next four gaseous planets are based on a set of natural laws related to the human mind. Pluto and any other celestial body we may detect in future don't belong to this. But the

existence of Pluto in the vicinity of the solar system without being in the ecliptic is also necessary as we'll soon realise." Those days when he talked about Pluto, we all believed it to be the ninth planet. When the IAU reclassified it as a dwarf planet, it appeared as a great proof of his statements. We sent a letter to the IAU in Sep 2006 regarding Pluto.

As you rightly mentioned, instead of eliminating poverty and malnutrition, we spend our resources and thinking on devising weapons and planning wars. But weapons and wars can't eliminate enmity; they only escalate it. Seeds of enmity get sown and begin to grow only in the human minds; so the enmity can be uprooted only from human minds. Virtue and truth must be established in its place if the minds are to honour one another. The basic creation of the human mind is according to this. Compelling proofs towards establishing one humanity are seen distributed widely in the planets of the solar system including the Earth. Dedicated, sincere, righteous individuals with clear logical thinking like you have an important role and responsibility to understand the forthcoming phase of knowledge and do the needful to convey it. It guides us towards the reunification of the entire humankind, breaking the barriers of religions and nations existing now. Although unthinkable at present, it'll surely take place. While humankind lived on the flat static Earth, the spherical, moving globe was indeed unthinkable. But the scientist(s) who realised this first struggled for several decades for its realisation. Similarly, the microbial world had to wait for a few decades before his people began to understand Leeuwenhoek and his microscope. We must plant the seed right now as it may take time to achieve the goal. The seed for this imminent phase of wisdom needs to be planted at the earliest as it's of utmost importance for all of us and for the coming generations.

To enter the extensive areas of the Revealing Wisdom, an exceptionally proficient team of responsible intellects from different areas of science, mathematics, psychology and philosophy is needed to comprehend matters and convey to the humankind. Over 3000 letters of utmost importance have been sent to renowned universities like Oxford, Harvard and Cambridge, research centres

such as NASA, CERN and LIGO, reputed scientists and Nobel laureates, all heads of nations and supreme courts, leaders of religions including the Hinduism, Buddhism, Judaism, Christianity and Islam, UN bodies, scientific journals and media including 'Nature', BBC, National Geographic and Animal Planet. Our first letter was sent to Dr APJ Abdul Kalam, the then President of India in 2004 as he was also a scientist. We had sent a letter to Justice KG Balakrishnan in Jan 2007 when he became the Chief Justice of the Supreme Court. We also had interactions with Justice R Basant, Justice KA Abdul Gafoor and Justice PK Shamsuddin several years ago. The website ceenom.in contains [Ceenom: The Mandate](#) (an abstract of the Message) and [Ceenom: The Manifest](#) (an essence of communications). If you send your postal address we could send you the updated hard copy of "Ceenom: The Message" which describes "the inevitable reality that leads to one humanity". We could also talk over the telephone. Yours sincerely, M Ameen (sgd)

Dear Friend, (Copy sent to all the above)

Something so obvious but so highly concealed emerges before human; its nearest analogy is the appearance of the moving globe before the archaic people who lived on the flat static Earth. It's causal-based and relates the First Cause and its effect that led to the origination of the infinite universe. It rationally describes the formation of the first particle, its motion and cause. That particle, and hence everything in the universe, is thus made of matter, motion and motive components. Nature uses the three basic colours red, green and blue to represent them as denoted on Earth by soil, foliage and sky. This threesome is also seen in subatomic particles (neutron, proton, electron), the states of matter (solid, liquid, gas), spread of species (under water, on land, in air), and in countless others. As everything entering our five senses are mathematical, we only sense mathematics. But we're unaware of the cause (motive) for its origin while we continue to use its matter and motion parts as digits and operators widely. Mathematics is the only tool given to our intellect to interpret causal relations in all realms. Why did it appear to the human mind? When and where did its causal relations take place? Or, what's the phenomenon of mathematics? As it gets disclosed, are there supporting evidences? Is mathematics a firm, well-guarded system? Does there exist fundamental proofs in mathematics that confirm it?

We, some of my colleagues and researchers in Calicut, first met Abdul Khader over 16 years ago (I, Ameen, did my masters and PhD from the Indian Institute of Science, Bangalore, and postdoc from Johns Hopkins University, US. I'm a professor at the National Institute of Technology in Kerala). Each topic he talks about is in an unusually high plane; he can logically relate why things exist and function the way they do. A particle or a cell, a species or a planet, the Sun or a galaxy exists and behaves that way due to very important but hidden inner principles related to the functioning of the human mind. Just as an academic institute is intended

primarily for its students, the boundless universe is solely for its student component—the human mind. The entire universe including the human body acts as the tools for learning. The universe is kept infinite as the human mind is unbounded; and as the human intellect is strictly causal-based, the universe is causal-based too. The complete angle kept as 360° , a day divided into 24 hours, an hour or a minute divided further into 60, or each second in a clock traversing 6° isn't just a coincidence. The basic colours numbering 3, the extensive use of the decimal digits (1 to 9 and zero), the Earth requiring 365 days and a few hours to orbit the Sun, a week having 7 days and a year 12 months are due to precise reasons we must know at once. We'll realise why a chemical element or a compound with a particular atomic structure shows a specific behaviour once we define mathematics and identify its causal basis of origination. Each species with its conduct, features and habitat is closely related to the working of the human mind. This'll logically explain the unending mysteries of species behaviour such as: strange species seen deep underwater; penguin, although a bird is unable to lift off the ground but flies adeptly under water; a bat, albeit a mammal, flies like a bird but hangs upturned and spreads virus while unaffected by it; female praying mantis eating the male's head during mating; and the symmetry of a spider arousing only a horrid feeling in us.

Our abode the solar system with four terrestrial planets, the asteroids at 5th orbit and the four gaseous ones (8 planets but 9 orbits) will be identified as a Divine Scripture. The blue Earth at 3rd orbit with a single moon, the calligraphed Jupiter at 6th, Saturn with splendid rings and an unusual hexagon (~3 Earths) at the north pole at 7th, and the retrograding Venus-Uranus (at 2nd and 8th orbits) are some of its features. About four years before the [International Astronomical Union](#) reclassified Pluto, he stated clearly that Pluto isn't a part of the solar system. The Earth intercepts very little of the Sun's infinite rays; but that little makes it the Earth! A man produces trillions of sperms in his lifetime; but the ova formation of woman is limited, periodic and related to lunar phases. He says that mathematics and golden ratio complement each other, and the golden sequence is profoundly related to the

evolution of the human mind. The five human senses are feeble in comparison to the senses of other species; the unequalled intellect elevates human to exaltedness.

We'll realise with clear logical proofs why Om was taught as the Primordial Sound and why each scripture and belief system appeared at the respective times. The Buddha was given the Eightfold Path and Moses, the Ten Commandments due to specific reasons we're about to know. Om denotes the three stages of entry of consciousness into material phase, the identification of the unseen beyond matter, and the conclusion of consciousness with salvation. It orders us to awaken, dream (see past matter) and conclude. We'll also realise why, among the many prophets named in scriptures, the followers of only three: Moses, Jesus and Muhammed exist on Earth now. The Ten Commandments given to Moses was mathematics, describing matter. Jesus was instrumental in founding human society on Earth, indicating time (motion). Muhammed was given the Quran in Arabic formula system, and not in Arabic language as was presumed until now (motive). The decryption of Quran happens now in the Furqan (Criterion) phase leading to explanation of everything around us. The 4 terrestrial planets denote matter, motion, motive and explanation, and 4 gaseous ones their invisible principles.

As the matter is unfamiliar and intricate, we must team up a group of dedicated, competent intellects with scientific background to learn this clearly and convey to humankind. Expert psychologists and representation from the followers of Om, Moses, Jesus, Muhammed, and all others too is needed to grasp this. Thousands of messages were sent earlier to important places including renowned universities, research centres, all heads of nations, UN, Nobel laureates, scientific journals and media. An essence of these messages is [*The Manifest*](#). A brief introduction to the matter is named *The Message* (only in print). Its summary is [*The Mandate*](#) (ceenom.in). Coming as a blessing, this revelation of true science transforms us into a cognisant society, guiding us from conflicts to tolerance, with each individual and community ceasing to harm one another. Even while surrounded by life, we're forced to leave in this state of distress and anguish afflicting us that can be identified as

related to nature and as part of journey towards evolution and intended human existence. Once human enters the fundamentals of causality behind the creation of the universe, nature's intended solution to the present crisis gets revealed, uniting the entire humankind into one single human society. Hasten, we must. Yours sincerely, M Ameen (sgd)

Human species is the only creation that can recognise fundamental facts lying in the unseen with the remarkable, most distinctive intellect. In the present stage of moving past signs, as we enter a phase of great hope and serenity, we must awaken at once. Such occurrences did take place often in the past too. That isn't but a human tendency. While we lived once on a flat Earth, aren't we now on a spherical globe? While we resided on a immovable Earth, aren't we living now on a globe that can never remain static? We also know we can't return to those earlier states either. Doesn't the Earth itself testify that once we enter the next phase, we can never return to the present? Upon the Earth that constantly witnesses change, how long can humans bestowed with the uniquely exalted intellect remain with this retarded nature? All those listed in The Manifest were informed by emails or surface mails regarding the message.

414-440 Letters (27 Aug 2020)

(Sent to all the addresses below)

The most profound manifestly evident 'Report' related to the Furqan and 'The Message' of the Divine Covenant of Cosmic Laws are enclosed herewith. As essential facts to reach to the profoundest depths of creation of the universe, its fundamental cause for the origination and the way it's organised—an unparalleled change from the once flat immovable Earth to the moving spherical Earth or from the geocentric to the heliocentric system, the Primal Norms before the first particle getting disclosed are concerned with the entire humankind and every nation has a most fundamental obligation, the involvement of the United Nations, scientists, researchers, visionaries and heads of nations is imperative. (Abdul Khader)

V Musthafa (sgd) M Ameen (sgd)

The manifestation of the solar system, the nature, trajectory and mutual transactions of each of its planets are based on the Primal Norms determined at the creation of the universe and encoded on the leaves of the Solar Scripture, for apprising the most exalted creation in the universe, the human mind, to perceive the unseen. Hence comprehending the founding norms of the solar system formation, and through it, those of the entire universe, is an

unavoidable human duty. As the 4th stage of the cause for the origination of mathematics is the dispersion of the material universe and as Mars is the 4th of the terrestrial planets, its manifestation is of utmost importance to humankind. Missions to it are greatly significant as it's closely related to the disclosing phase of the Quran—the Furqan—that results in an immense leap in our understanding of mathematics and sciences. This causal-based phase relates the First Cause and its first effect that led to the origination of the boundless universe. The Report must be read with greatest attention as the matter is unfamiliar and intricate. It logically describes the formation of the first particle, its motion and cause. That particle, and hence everything in the universe, is made of matter, motion and motive (space, time, consciousness) elements. Nature uses the 3 basic colours red, green and blue to denote them on Earth by its soil, foliage and sky. This threesome occurs in subatomic particles (neutron, proton, electron), states of matter (solid, liquid, gas), spread of species (in water, on land, in air), and in countless others. As everything entering our five senses are mathematical, we only sense mathematics. But we're unaware of the cause for its formation while we continue to use its matter and motion parts as digits and operators widely. The only tool to human intellect to interpret the causal links in every realm is mathematics. Did it appear to human mind or did we invent it? When and where did its causal relations arise? Or, what's mathematics? As it gets disclosed, are there clear evidences? Is it a well-guarded system? Are there basic proofs in mathematics itself that confirm it?

A particle or a cell, a species or a planet, the Sun or a galaxy exists and behaves the way it's due to very important but concealed inner principles related to the functioning of the human mind. Just as an academic institute is meant primarily for its students, the unbounded universe is intended solely for its only conscious 'student'—the human mind. The whole material universe including the human body acts as tools for its learning. The universe is kept infinite as the human mind is boundless; and as the human intellect is causal-based, the universe is strictly causal-based too. The complete angle kept at 360°, a day divided into 24 hours, an hour or

a minute divided further into 60, or each second in a clock traversing 6° isn't just a coincidence. While we tend to think we humans developed them, we'll soon recognise with evidence that these were taught by nature and we were only instrumental. The basic colours numbering 3, the extensive use of decimal digits (1 to 9 and zero), the Earth requiring 365 days and a few hours to orbit the Sun, a week having 7 days and a year 12 months are all due to specific, precise reasons we must know at once. We'll soon realise why a chemical element or a compound with a particular atomic structure shows a particular set of characteristics once we define mathematics and identify its causal basis. Each species with its conduct, form, features and habitat is closely related to the functioning of the human mind in a subtle way. This'll rationally explain the unending mysteries of species behaviours such as: strange species seen deep underwater; penguin, although a bird unable to lift off the ground, flies adeptly under water; a bat, albeit a mammal, flies like a bird but hangs upside down and spreads virus while being unaffected by it; a female praying mantis eating the male's head during mating; and the sight of a spider arousing only a horrid feeling despite its perfect symmetry.

Each of the existing belief systems on Earth remain so due to strict causal reasons we're yet to identify. We'll know with logical proofs why Om was taught as the Primordial Sound and why each scripture and belief system appeared at their respective times. The Buddha was given the Eightfold Path and Moses, the Ten Commandments due to specific reasons we'll soon know. Among the prophets named in scriptures, the followers of only three—Moses, Jesus and Muhammed—exist on Earth now. The Ten Commandments given to Moses was mathematics, describing matter. Jesus was instrumental in founding human society on Earth, denoting time. Muhammed was given the Quran in encrypted Arabic system, and not in Arabic language as was presumed so far, indicating consciousness. The 3 prophets thus correspond to space, time and consciousness phases, and this is why only their followers live on Earth now. The decryption of Quran happens in the disclosing phase of Furqan leading to elucidation of everything around us. The 4 terrestrial planets denote matter,

motion, motive and manifestation stages, and the 4 gaseous ones their complementary unseen principles. Thus, the 4th orbital position denotes the hidden manifestation phase (“He taught him elucidation”, Q55:4), and all missions to Mars are closely related to this phase.

Most significant as yet concealed meanings of Quran are getting exposed now as indicated by “You’ll certainly know its facts after a time” (Q38:88), and “We’ll show them Our signs on the horizons and within themselves until it’s manifest to them that it’s the truth” (Q41:53). Clear proofs that “Lawhul Mahfuz” (Q85:22) is the solar system itself are obtained (Q21:32). The verses of the opening chapter (Q1:1-7) testify this. The Quran describes these as the seven of the oft-repeated (Q15:87). The seven verses of Q1, the (7th) position of enthronement and the seventh orbit of Saturn are all included in this mention. “His Throne was upon water” (Q11:7) indicates the Earth at the 3rd orbit. Q1:7 points subtly to why Pluto isn’t a planet. The ‘nine evident signs’ given to Moses (Q17:101, 27:12) denote mathematics and the 9 solar system orbits (8 planetary and one asteroidal), and is evidenced in the ordering of the verses in several chapters (Q1:1-7, 55:1-4, 96:1-5). “The colouring of God; and who is better than God at colouring; and we’re His worshippers” (Q2:138) indicates ‘colour’ is a Scripture and a command to be grasped and obeyed. The numerous rainbows in 7 colours on Earth, the spectacular colourful solid rings and the evident markings on Saturn at 7th orbit are all interrelated. “Upon it are 19” (Q74:30) too signifies mathematics (1 to 9). Each of the above and many more can be proved in front of a group of intellects having a strong scientific background and Quranic awareness. We must guard against the forewarnings in Quran: “If they see a sign, they turn away and say ‘Passing magic’..” (Q54:2, 26:5, 37:14, 41:4); and “truly conjecture can be of no avail against truth” (Q10:36, 53:28).

The forthcoming phase indicated by Q25: The Furqan (Criterion) exposes matters that remained hidden during the last 14 centuries. “The truth has come and falsehood has departed” (Q17:81) signifies this. That the Quran is in an encrypted Arabic system is affirmed by Q12:2, 43:3 and 13:37. The ‘disjoined Arabic letters’ (Hurooful

Muqatta'at) occurring at the beginning of 29 chapters testify this. These letters are classified as the essence (*Muhkamath*), and attested by the Quran as 'the mother of the Book' (Q3:7); the remaining words are similar (*Muthashabihath*). It declares: 'that is the Book', right after the first such occurrence *Alif-Lam-Meem*, and says 'guidance for the intellect, there's no doubt' (Q2:1-2). Each Arabic alphabet is made of three sounds denoting space, time and consciousness. As the *Furqan* phase reveals, all the disjoined letters get completely defined with proof and constitute the most fundamental part of the decryption. Just as the clues about a particle is contained in itself, every word in Quran is encrypted and defined fully by itself. Although '*Muthashabihath*' appear similar to the words in Arabic language, they too are encrypted. Besides, the numeric values of Arabic letters—*Abjad*—a system first developed in Hebrew during the time of Moses and completed in Arabic during the Quranic revelation, brings undeniable proofs. Contrary to our thinking, "Who has raised us up from our sleeping place?" (Q36:52) indicates the lethargy of our minds, and "And the mountains will become like wool, fluffed up" (Q101:5) describes the shattering of pride and conceit we continue to cherish.

The first three verses of Q69: *The Reality* and Q101: *The Calamity* with similar structure describe this disclosing phase, with Q69:4 citing Q101. Q69:7 states 7 nights and 8 days, and implicitly points to Q56: (7×8) *The Event*, signifying the unfolding phase. We'll soon know our abode the solar system with 4 terrestrial planets, asteroids at the 5th orbit and 4 gaseous planets is a Divine Scripture symbolised by the founding norm (*La ilaha illa Allah*). The blue Earth at 3rd orbit with a single moon, the calligraphed Jupiter at 6th, Saturn with its splendid rings and most unusual hexagon (of size ~3 Earths) at its north pole at 7th orbit and the retrograding Venus-Uranus pair (at 2nd and 8th orbits) are some of its features. The Earth intercepts very little of the Sun's infinite rays; but that little makes it the Earth! A man produces trillions of sperms in his lifetime; but the ova formation in women is limited, periodic and related to the lunar phases. While sperms that decide the sex of offspring are produced naturally in the presence of woman, an ovum emerges periodically irrespective of man's presence or

absence. Mathematics and golden ratio complement each other, and the golden sequence profoundly expresses the human mind's evolution. The five human senses are feeble when compared to the senses of other species; the unparalleled intellect—the 6th sense—elevates human to exaltedness. Arriving as a blessing, this revealing phase of true wisdom will transform us into a cognisant society, guiding us from conflicts to tolerance, with each individual and community ceasing to harm one another. Even while surrounded by life, we're forced to live in the state of distress and anguish afflicting us that can be seen as related to nature and as part of the journey towards evolution and the intended human existence. Once human enters the fundamentals of causality behind the creation of the universe, nature's intended solution to the present crisis gets exposed, and the entire humankind unified into one single society (Q21:92, 23:52).

Very important but brief descriptions appear in Ch33 and 34 of *The Message* (printed copy enclosed) regarding the pairing of the solar system planets. As the Message is intended for a broad audience including reputed universities, research centres, eminent scientists and Nobel laureates, many evidences in Quran aren't explicitly stated; yet, some descriptions are indeed included. The two images on Ch43 show how the first 5 revealed verses of Quran are related to the solar system. All the norms listed in Ch02 have evolved from the Furqan—revealed from Quran, as manifested by the Guarded Tablet, the solar system. A brief description of each norm appears in Ch65. These norms will be completely explained with proof. Our abode the Earth, the encompassing solar system and their mutual interactions are the directives in the Divine Scripture, logical evidences are distributed widely in Quran, with clear proofs inscribed visibly on the Moon, with signs about this phase comprehensibly indicated for the entire humankind, and the declaration: “The Moon is split asunder” (Q54:1) concerns this phase itself are recognised. It's realised that a phase appears with clear logical evidences regarding the countless phenomena on Earth, in the whole universe, and in every particle, in the living species dispersed all around and in the way nature is spread on Earth, with mathematics, geometry and divine section getting

completely redefined, and denoting the 5th value and 5th position of mathematics and golden sequence in the first 4 verses of Q55 representing the first four terrestrial planets, and the 4th verse, “He taught him elucidation” (Q55:4) indicating this phase. More after the preliminaries.

The first five verses of Quran revealed in the imperative form are in the divine mean. These verses beginning with “Read in the name of your Lord” (Q96:1-5) are encoded on the Moon as visible inscriptions, with verifiable evidences from the Solar Scripture—mathematics—that sustains and controls the entire universe, is recorded as the first part of Q96: The Clot (note the abrupt change after Q96:5), and its particulars revealed as Q54: (9×6) The Moon, “The Hour is nigh; and the Moon is split asunder” (Q54:1) appearing in the present tense, signifying that the Moon will be fully defined as a sign and symbol for humankind. This is like the cleaving of a seed before it defines the tree it holds (Q6:95). This phase could happen only now as the Moon’s far-side had to be exposed. The far-side describes how to read the nearside. It’s as a quick directive to every soul ready to read the five golden verses on the Moon that proclaims, “As an ovum is split on your behalf and you’re born with consciousness, read upon me”. God regulates the ovum formation based on lunar phases, and for bearing the humankind in pregnancy, suckling, nurturing, and establishing an unseen fatherhood in its mind, thereby guiding it towards the unseen God, He dignifies a woman and engages her in the greatest mission of founding a human society with a mind that’s in constant touch with God. To causally manifest this dignity, testifying the 1st to 9th leaves of the Solar Scripture, ‘Q19: Maryam’ informs us about her announcing: “Indeed God has chosen you, purified you and chosen you above the women of the worlds” (Q3:42). The Quran that instructs to call children after their fathers (Q33:5) itself declares, “Isa, son of Maryam” (Q3:45). It says “He’ll speak to the people in the cradle and in maturity” (Q3:46). Thus, because it’s prescribed upon every soul on Earth as a basic law, to be conceived in the cradle—in mother’s womb—in purity, based on a covenant, every such soul throughout its life must establish, again in purity, the unseen father and unseen Creator in exaltedness, with no child

born on Earth without proof or pact, and the exalted God must be enthroned in every mind, Maryam's child is named 'Yahya' (living). Based on the sublime mission of conceiving the child, nurturing it upon God's laws and submitting it to its father and Creator, the Quran itself proclaims the child in front of human after her name as 'Isa, son of Maryam' (Q19:34). As its manifestation, in Q24: The Light, He has kept Venus—the brightest object in the night sky after the Moon, with its piercing light 'like a star' (Q24:35), to enter forcibly into our range of vision. He also foretells us about a way to self-illuminate in the shining niche of the human mind as 'light upon light', and it reaches the greatest shine under God's light. God has kept asteroids at 5th orbit signifying the 5th verse of Q55 that fully describes moral obligations, transactions, relations, duties and deeds between man and woman. From Q55:5 that provides more proofs from its golden position onwards, considering women and men as distinct societies based on how the Sun and Earth are related and organised, the Sun made the cause for the entire living species and nature, and Earth, keeping itself alive, without abandoning any energy acquired from the Sun, bearing us alive and protecting, addressing that one man and that one woman and thus, every single man and every single woman, He proclaims: "And the star and the tree prostrate" (Q55:6).

Standing at the first leaf of the Solar Scripture, at the position of Mercury—the planet Moses represents, he apprises his family, "Stay here; indeed, I perceive a fire" (Q20:10). Here 'fire' denotes the burning Sun next to Mercury. God enlightens Moses at the first leaf itself about the rules of living without conceit or pride and to "Take off your sandals. Indeed, you're in the sacred valley" (Q20:12), and thus to empathise with Earth; here 'the sacred valley' is the ecliptic plane. He orders the believers to establish their roots in the depths of profundities in physical sciences, to grow to the greatest conceivable heights to the bounds of heavens, and to produce fruits at all times as a tree (Q14:24-25). This is realised as the phase in which humankind must prostrate and obey. Between every woman and man, and for the entire humankind, He has set a balance in the sublime planes of thoughts (in heavenly realms). The questions asked are: what difficulties exist for humankind to absorb the

Divine verses rightly without transgressing and to advance, pointing to the evidences distributed widely over the Earth, and which proofs you disbelieve. Addressing man and woman distinctly as “You two overburdened ones” (Q55:31), it’s asked: “Which of the favours of your Lord would you two deny” (Q55:13). This verse is repeated 31 times due to a specific law. Keeping man and woman in the forefront, He informs us in Q55:17: “He is the Lord of the two sunrises and the Lord of the two sunsets”. He apprises us about “releasing the two seas so that they blend”, and “setting up a barrier between them so that they don’t transgress” (Q55:19-20).

We must focus attention on the Quran revealed and kept guarded upon the solar system as Lawhul Mahfuz at once. We need to consider the looming great calamity as a closely related cause (e.g. Q69, 101, 68:16, 36:65-67). We pass through a most mysterious, momentous occasion. But hope and expectations await us. Know that the Mars-Missions humankind is involved in are closely related to a command towards this phase. This Report must be studied with due seriousness and solemnity. The descriptions here are only minimal; detailed account may overflow volumes. The gaseous planets denoting the unending explanation of the unseen account for over 99% of the total mass of all the planets, and hence their descriptions remain incomparably vast.

Absorbing the ‘blue’ of the sky that has no pigment on Earth, the colourless transparent water in the ocean displays the Earth as a ‘blue marble’ declaring: “I bear the sublimest species in the entire universe that can comprehend from the unseen the true wisdom with no impurity”. Since “If sea were ink for writing the words of God, the sea would exhaust before His words (Q18:109), even if replenished by seven more seas (Q31:27)”, we must hasten to describe what’s been disclosed so far regarding the gaseous planets of the Solar Scripture that complement the terrestrial ones—to distinguish truth from falsehood. Starting with the Primordial Om and with representations from the followers of Moses, Jesus, Muhammed and other belief systems, we must begin to define the fundamental founding norms of the universe scientifically and logically, and with complete evidence in the presence of a team of intellects from every area of science, mathematics and psychology

at once. I expect each of you receiving this will realise the urgency, fulfil your duty and carry out the necessary steps to form the team at once. We must ponder deeply: Out of His greatest bounty and mercy, a decision to appoint a vicegerent upon the Earth took place, the angels were informed about it, the discourse with the human consciousness (Adam) took place, and was ordered to descend from the heavenly abode to this material state spread over the entire physical universe (Q2:30-38). We must hasten to reach “Before the First Pulse Before the First Particle: The Primal Norms”.

As essential facts to reach to the profundities of creation of the universe, its founding cause for the origination and the way it's organised—an unparalleled change from the once flat static Earth to the moving globe or from the geocentric to heliocentric system, the topics above are concerned with the entire humanity and every nation has its role, the involvement of the UN, scientists, researchers, visionaries and heads of nations is imperative. We'll soon begin to realise the hidden causal reasons behind every phenomena and the fundamental fact that the entire universe is consciocentric. **Abdul Khader**

We, some faculty and researchers in Calicut, had the first meeting with Abdul Khader over 16 years ago; we two continue to listen ever since. The topics he talks about are all in an unusually high plane, accompanied by profound, indisputable proofs. Although he hasn't learnt Arabic language, he describes deep meanings and interpretations of the Quran including why a verse came at that location in that specific way with clear logical proofs. While space and time aspects of Quran only were known until now as its text and recitations, the Furqan discloses its hidden consciousness component. We affirm and testify the truth of the matters mentioned above as we continue to witness proofs from different angles. As an instance, about 4 years prior to the reclassification of Pluto (when it was considered as the 9th planet) by the International Astronomical Union (IAU), he had stated clearly that Pluto is not part of the solar system planets. We sent a letter to IAU on Sep 4, 2006 (p9, [The Manifest](#)) which was duly acknowledged and a representative contacted us. From 2004 onwards, we had sent thousands of letters to many reputed universities, research centres,

social organisations, all heads of nations, UN, religious leaders, renowned scientists, Nobel laureates and scientific journals. A summary of these letters is '[The Manifest](http://ceenom.in)' (ceenom.in). The Message is a brief preface to the matter; its abstract, '[The Mandate](#)', also is available in the website.

As a scientific community aware of the Quran, it's our duty to verify the facts using the nature-given intellect. We urge you to read this Report and The Message with great attention and seriousness. As the matter is unfamiliar and intricate, we must team up a group of dedicated, exceptionally competent intellects with strong scientific background at once to learn and convey to humankind. Expert psychologists and proper representation from the followers of Om, Moses, Jesus, Muhammed and other faiths are also necessary in the group. We urge you to interact with us at the earliest.

Dear Friend, (Copy sent to the above)

Science is on the cusp of a most essential transformation from the present state dealing with only matter and energy to a truly consciocentric universe with an underlying strict causal basis. While the invisible consciousness element governs everything in the universe, no instrument can sense it except the unparalleled human intellect. This'll enable us to recognise the fundamental cause behind the origination of the universe. Just as an academic institute is founded primarily for its students, the entire universe originated for its sole learning component—the human mind. As the human mind is unbounded, the universe is kept boundless; and as the

human mind is causal-based, the universe too is kept causal-based. Everything in the universe including our physical body are the tools for its learning. The nine fundamental stages of mathematics are included as the primary lessons in our abode the solar system (with 8 planets but 9 orbits). Unlike the planets or their moons, the asteroids constitute millions of irregularly shaped bodies occupying the 5th orbit. As they denote humans they're the most essential part of the Solar Scripture. The smallest planet Mercury at its 1st leaf, the retrograding Venus-Uranus pair (at 2nd and 8th leaves), the blue Earth with a single Moon at 3rd, the most explored planet Mars at its 4th leaf, the asteroids bordering the terrestrial and gaseous planets at 5th, the largest and the calligraphy-like markings on Jupiter at 6th, Saturn with spectacular crowning rings at 7th leaf, the serene Uranus at 8th and the deep blue Neptune at 9th are some of its distinctive features. Only when human minds are unified with no alternative over fundamental facts and principles, completely admissible to the intellect just as how the Sun, oxygen or water is one with no substitute, will human truly unite with one unified belief and one nature.

Many familiar facts exist the way they do due to inherent reasons we're about to comprehend: Venus, the brightest planet in the night sky appears at convenient viewing angles; the retrograding 2nd and 8th orbits of Venus-Uranus pair also indicate the maximum number of valence electrons in atomic shells. Everything in the universe is made of matter, motion and motive elements. The fourth manifestation stage is related to planet Mars at fourth orbit. From sources of energy extracted until now only from Earth, we'll soon begin to draw energy without fear of climate change from the Sun with far greater ease and efficiency. We'll also begin to derive genuine wisdom directly from its Source in place of the present material knowledge.

The above were conveyed by Abdul Khader whom we met 16 years ago and continue to listen ever since. All his statements with evidences are in unusually high planes. We two affirm and testify these matters as we continue to witness clear proofs. Thousands of letters were sent to reputed centres and individuals. A summary of these letters is '[The Manifest](http://ceenom.in)' (ceenom.in). The Message is a brief

preface to the matter; its abstract, [‘The Mandate’](#), too is given in the website. A condensed version of the letter sent to Prof. Penrose, et al. on Nov 29, 2006 (p12, [The Manifest](#)) is enclosed. The Report sent in Aug 2020 to the UN, renowned space centres, reputed universities and Nobel Committee is also enclosed. A team of exceptionally competent intellects with logical thinking and unbiased ability to examine facts with experience from acquired scientific knowledge needs to be formed at once to grasp and disseminate this most significant revealing wisdom.

V Musthafa (sgd) M Ameen (sgd)

446-451 Letters (26 Oct 2020)

Jacinda Ardern, Prime Minister, Morningside, Auckland, New Zealand	Benjamin Netanyahu, Prime Minister of Israel, Jerusalem, Israel
Pope Francis PP, Apostolic Palace, 00120 Vatican City State, Vatican	President, Federation of Islamic Assocns of New Zealand, Wellington
P Maurer, President, International Committee of Red Cross, Switzerland	M Bachelet, UN High Commissioner for Human Rights, Switzerland

Dear Sir, (Copy sent to all the above)

Humankind is realised to have reached a cheerful phase of great hope and expectation that arouses and elevates itself, nature and Earth alike. The difficult stage that we pass through now is perceived to take us to a phase of significant understanding and reform. It's high time we arrived at a solution to the present sad state of poverty, homelessness, discrimination, homicide, terrorism, oppression, injustice and inequality affecting millions of fellow humans the world over. The pristine state of Earth faces threats due to deforestation, pollution including plastic deposits leading to global warming and climate change resulting in floods and tsunamis, depletion of potable water, weakening of ozone layer and other forms of excessive human violations. Humankind responsible to take the Earth back to its original virginity must begin to act at this very moment itself. Since every human is born equal with equal basic human rights, it's our duty to ensure equality among the

entire humankind and for generations. As only the human mind plants vice and disaster in this heavenly abode of virtue, peace and existence, a solution to all such problems is possible only through true wisdom and deep intellection. To enter one single theory or concept that unifies every principle, philosophy, science and spirituality, humans must unite as one single unified community. For that one human, one single destination for journey too is necessary.

The above are conveyed by Abdul Khader whom we met 16 years ago and continue to listen ever since. His statements, accompanied always by evidences, are all in unusually high planes. We two affirm and testify these matters as we continue to witness clear proofs. This is written to convey glad tidings of a revealing phase of wisdom of utmost significance relating science and humanity. This wisdom takes us from the present state dealing with just matter and energy to the most important consideration of an unseen cause related to why a particle or a cell, a species or a planet, the solar system, milky way or beyond exist the way each does. The unseen causal basis of the universe will sharpen our thinking and enable us to reach to the fundamental cause behind the origination of the universe and the human mind. With a clear understanding of 'what my deed is' and 'how I am obliged to humankind, the Earth and nature around me', a duty-bound human soul emerges, and with true recognition encompassing the whole universe, a causal-based human mind—the true humankind—evolves. The Earth eagerly awaits the arrival of such a true humankind to get back to its pristine states of serenity and grandeur. A large number of letters were sent earlier to reputed positions and individuals. A summary of these letters is 'The Manifest' (ceenom.in). The Message is a brief preface to the matter; its abstract, 'The Mandate', too is given in the website. One of the recent letters sent to the UN, renowned space agencies, reputed universities and Nobel Committee is attached. A team of exceptionally competent intellects with clear logical thinking and ability to examine facts without prejudice and with experience from acquired scientific knowledge needs to be formed at once to comprehend and disseminate this significant revealing wisdom.

V Musthafa (sgd) M Ameen (sgd)

452-460 Letters (02 Dec 2020)

(Copy sent to all in the list below)

The most profound, manifestly evident “Report” related to the Furqan and “The Message” of the Divine Covenant of Cosmic Laws are enclosed herewith. As essential facts to reach to the profoundest depths of creation of the universe, its fundamental cause for origination and the way it’s organised—an unparalleled change from the once flat and static Earth to the moving globe or from the geocentric to the heliocentric system, the Primal Norms before the first pulse, before the first particle getting disclosed are concerned with the entire humankind and every nation has a most fundamental obligation, the involvement of the United Nations, scientists, researchers and the heads of nations is imperative. (Abdul Khader)

The manifestation of the solar system and the nature, trajectory and mutual transactions of each of its planets are based on the Primal Norms determined at the creation of the universe and encoded on the leaves of the Solar Scripture for apprising the most exalted creation in the universe—the human mind—to perceive the unseen. Hence comprehending the founding norms of the solar system, and through it, those of the whole universe, is an inescapable human obligation. This Report gives glad tidings of a forthcoming causal-based phase relating the First Cause and its first effect that led to the origination of the infinitely vast universe. The need for understanding the Truth could at no time in history be appreciated more intensely than at present. It’s delightful to acknowledge this realisation in Closer To Truth website and its collection of excellent videos and narrations produced over the last two decades. For over the past sixteen years, we’ve been witnessing the disclosure of a wisdom of paramount importance to science and humanity that unites every living human upon Earth into one unified human society. From first human, millions of sincere steadfast people have striven to achieve all that we’ve learnt so far. At some stage, knowledge got divided into science and spirituality. Science traversed a rigorous path of strict causality, taking us to

nanolevels and to remote stretches of the universe. Things that seemed spiritual once became scientific later. But even after centuries, innumerable matters that can't be defined within a precise causal framework continue to exist. Myriad species make us wonder why they behave in those ways. Closer scrutiny, instead of giving clarity, frequently adds only to bewilderment. Such strange acts continue to remain outside the scientific purview that accepts what appears only to the senses without going into the 'why'. Thus, we don't ask why an atom has electrons orbiting its nucleus or a molecule made of atoms yields a specific compound with a specific set of features. In all our scientific advancements so far, we've completely missed the very fundamental causal component that resulted in the origination of the unbounded universe.

Science is on the verge of a most essential transformation from the present state dealing with only matter and energy to a truly consciocentric universe with an underlying strict causal basis. While the invisible consciousness element governs everything in the universe, no instrument can sense it except the unparalleled human intellect. This'll enable us to recognise the fundamental cause behind the origination of the universe. Just as a university is founded primarily for its students, the entire universe originated for its sole learning component—the human mind. As the human mind is unbounded, the universe is kept boundless; and as the human mind is causal-based, the universe too is causal-based. Everything in the universe including our physical body act as tools for this exalted learning. The nine founding bases of mathematics are included as the primary lessons in our abode the solar system with 8 planets but 9 orbits, making it a Divine Scripture. Unlike planets or their moons, the asteroids constitute millions of irregular bodies at the fifth orbit. As they denote humans, the Solar Scripture exists solely for the asteroids. Mercury at its 1st leaf, the retrograding Venus-Uranus pair at 2nd and 8th, the blue Earth with a single Moon at 3rd, the most explored Mars at its 4th leaf, the asteroids bordering the terrestrial and gaseous planets at 5th, the calligraphed Jupiter at 6th, Saturn with its spectacular rings at 7th leaf, Uranus and Neptune appearing blue at 8th and 9th leaves are some of its most distinctive features. Many familiar facts exist the way they do due to inherent

reasons we're about to know: Venus, the brightest in the night viewing angles; the retrograding 2nd and 8th orbits of Venus-Uranus pair also denote the maximum number of valence electrons in atomic shells. The Solar Scripture, a Divine System determined at the beginning of creation, is thus the Preamble to the Universe.

While we identify matter and energy components in everything around us, the most significant consciousness component has eluded us all along. Only when we develop trustworthy methods to read the hidden basic laws from material and operational displays will such reading be possible; it must be valid from the tiniest particle to the remote ends of the universe. Nature uses the three basic colours red, green and blue to identify these—the Earth shows a form of red in its soil (matter), green in its foliage (motion) and blue in the sky and the ocean (motive). That the blue pigment is rare on Earth and even species seen in blue don't carry blue pigment are due to this. Although we can physically touch the red represented by the soil and the green by foliage, the blue of the sky (or sea) evades any touch due to profound reasons. The entire species on Earth relies either directly or indirectly on the green of the foliage which makes and stores energy from the Sun. Everything in the universe is thus made of matter, motion and motive elements. The fourth stage of manifestation is related to planet Mars occupying the fourth orbit. That's why precisely four terrestrial planets exists in the solar system.

Physical sciences will soon be learnt only along with their consciousness component. This'll enable us to approach spirituality logically, and never blindly. A scientific approach to spirituality will reveal great undisclosed treasures. We'll know with logical evidences why 'Om' was taught as the Primordial Sound and why each scripture and true leader came at the respective periods. There is a specific reason why the Buddha was given the Eightfold Path and Moses, the Ten Commandments. The Star of David, a dignified symbol for the followers of Moses and the entire humankind, will soon be defined. It's important to know why the birth of Jesus is related to a five-pointed star, and to identify this star. Arabic, much more than a language, is an encrypted system with each word denoting a formula. The Quran is a Book written in formulae and a

collection of intricate revealed facts. It declares Furqan (Criterion) as its essence. It'll appear with the harmony of nature as the essential handbook, eliminating all differences in meaning and interpretation. 'It is inscribed on a Guarded Tablet'—the Solar Scripture (Quran 85:22). All the special letters (Muqatta'at) at the start of several chapters in Quran that remained undefined so far will be defined. Why different messengers named in Torah, Bible and Quran were given those specific names, why Moses, Jesus and Muhammad came in that specific order, and why the followers of only these three prophets remain on Earth now will each be known. Soon all religions will join to form a single unified advancing society guided by clear logical reasoning. Only when human minds are unified with no alternative over fundamental facts and principles, completely admissible to the intellect just as how the Sun, oxygen or water is one for all of us without any substitute, will human truly unite with one unified belief and one unified nature. Absorbing the 'blue' of the sky that has no pigment on Earth, the colourless transparent water in the ocean displays the Earth as a 'blue marble' declaring: "I bear the sublimest species in the entire universe that can comprehend from the unseen the true wisdom with no impurity". Since "If sea were ink for writing the words of God, the sea would exhaust before His words (Q18:109), even if replenished by seven more seas (Q31:27)", we must hasten to describe what's been disclosed until now regarding the gaseous planets of the Solar Scripture that complement the terrestrial ones—in order to distinguish truth from falsehood. We must hasten to reach "Before the First Pulse Before the First Particle: The Primal Norms".

We, some faculty and researchers in Calicut, first met Abdul Khader over 16 years ago; we two continue to listen ever since. Topics he talks about are all in unusually high planes, accompanied by clear proofs. About 4 years before Pluto was reclassified by IAU (while it was thought to be the 9th planet), he stated clearly that Pluto isn't part of the solar system planets. We sent a letter to IAU on Sep 4, 2006 (p9, [The Manifest](#)) which was acknowledged and a representative contacted us. From 2004 onwards, we've been sending thousands of letters to reputed universities, social and

research organisations, heads of nations, UN, religious leaders, eminent scientists, Nobel laureates and media. A summary of these letters is '[The Manifest](http://ceenom.in)' (ceenom.in). The Message is a preface to the matter; its abstract, '[The Mandate](#)', too is available in the website. As the matter is unfamiliar and intricate, we must team up a group of dedicated competent intellects with scientific background quickly to learn and convey to humankind. Expert psychologists and representation from the followers of Moses, Jesus, Muhammed and other faiths too are necessary in the group. We urge you to interact at once.

461-462 Letters (06 Dec 2020)

Jim Al-Khalili, Prof Physics, University of Surrey, Guildford, Surrey, UK	G Saliba, Prof Arabic, Islamic Science, Columbia Univ, New York, USA
---	--

Dear Friend,

We happened to see some of your videos related to Science and Islam recently and decided to write to you again. A brief of our earlier letter sent on 25th May 2011 to Jim and a few others who appeared in 'BBC Four' is given overleaf. We've been witnessing an emerging phase of wisdom of utmost significance related to science and humanity that describes everything from a cause-effect perspective. Only when we recognise what caused mathematics to originate, or what is mathematics, will we begin to realise the answers to fundamental questions like 'who am I', 'what is time' or 'why is the sky blue'. Everything in the universe is made of three fundamental constituents: matter, motion, motive (space, time,

consciousness). The Earth shows a form of red in its soil, green in its foliage and blue in the sky. While we can physically touch the soil and foliage (red and green), we can't reach to the blue of the sky due to this. The rarity of blue pigment on Earth and species seen in blue not carrying blue pigment are also due to this. Just as a university is founded primarily for its students, we'll soon know that the entire universe originated solely for its unique student component—the human mind. The universe is made causal-based and boundless as the human mind is causal-based and unbounded. Everything in the universe including our body acts as tools for this exalted learning. So far, we could only study about the matter and energy components of everything; the most fundamental but unseen consciousness component has eluded us all along. However, no instrument can ever sense consciousness except the unique human intellect.

As human is one, human nature and belief system too must be one. We'll soon know with proof why Om was taught as the Primordial Sound and why each scripture and belief system appeared at their respective times. The Buddha was given the Eightfold Path and Moses, the Ten Commandments due to very specific reasons. Among the many prophets named in scriptures, the followers of only three—Moses, Jesus and Muhammed—exist on Earth now. The Ten Commandments given to Moses was mathematics, describing matter. Jesus was instrumental in founding human society on Earth, denoting time. Muhammed was given the Quran in encrypted Arabic system, and not in Arabic language as was presumed until now, indicating the consciousness phase. The three prophets thus correspond to matter, motion and motive phases, and this is why the followers of only these three live on Earth now. The first three terrestrial planets denote these three and the fourth planet Mars represents the manifestation phase pertaining to the disclosing phase of the Quran: "He taught him elucidation", (Q55:4). The decryption of Quran takes place in this phase of Furqan leading to elucidation of everything around us. The special letters occurring at the beginning of 29 chapters testify this. These letters are the essence, and attested by the Quran as 'the mother of the Book' (Q3:7); the remaining words are 'similar'. It

proclaims: 'that is the Book', right after the first such occurrence, and says 'guidance to the intellect, there's no doubt' (Q2:2). Each alphabet in Arabic is made of three sounds denoting space, time and consciousness. As the Furqan phase reveals, all special letters get completely defined with proof and constitute the most fundamental part of the decryption. Just as the clues regarding a particle is contained in itself, every word in Quran is encrypted and is described fully by itself. Although the 'Muthashabihath' may appear 'similar' to the words in Arabic language, they too are encrypted. In addition, the numeric values of Arabic letters—Abjad—a system first developed during the time of Moses in Hebrew and completed in Arabic during the Quranic revelation, brings undeniable, mathematically precise proofs. Clear evidence that "Lawhul Mahfud" (Q85:22, 21:32) denotes our abode the solar system itself are being obtained. We'll soon realise the founding norm 'La Ilaha Illallah' symbolises the solar system with four terrestrial planets, the asteroids at the fifth orbit, and four gaseous planets constituting 8 planets but 9 orbits as a 'protected disc'.

We, some faculty and researchers met 'Abdul Khader' over 16 years ago; we two continue to listen ever since. The topics he talks about are all in an unusually high plane. Although he hasn't learnt Arabic language, he describes deep meanings of Quran including why a verse came at that location in that way. All the information above came from listening to him. From 2004 onwards, we had sent a large number of letters to reputed universities, research centres, social organisations, heads of nations, UN, religious leaders, renowned scientists, Nobel laureates and journals. A summary of these letters is available in 'The Manifest' (ceenom.in). A brief preface to the matter is The Message (only in print); its abstract, '[The Mandate](#)' (both enclosed), also is given in the website. As the matter is unfamiliar and intricate, we must team up a group of dedicated, exceptionally competent intellects with strong scientific background at once to learn and convey to humankind. Expert psychologists and representation from the followers of Om, Moses, Jesus, Muhammed and other faiths too are necessary in the group. We urge you to interact with us at the earliest.
